CHAPTER XXXIII.

ADMISSION TO EXAMINATIONS.

1. *Every candidate for a University Examination shall unless Act, Sec, 93 (2).
exempted from the provisions of this section by an order of the
Syndicate, made in accordance with conditions laid down by
the Academic council, be an enrolled member of an affiliated
college.*

2. No candidate shall be admitted to any examination until Registration for
he has been registered. A candidate shall be registered afresh each Examination ;
on each occasion on which he presents himself for examination Fee. Regulation.
and no candidate shall be registered until he has paid the fee prescribed for the examination.*

3. A candidate applying for admission to the Matriculation examination for the first time shall furnish as his date of birth the date as entered in his S.S.L.C. register. Date of Birth
in University
records.
Ordinance.

Candidates for whom S.S.L.C. register has not been maintained, the date as entered in the school register at the time when he last studied in the highest class of the Secondary department shall be furnished.

A candidate permitted to apply for admission to the Matriculation examination without having studied in any recognized institution shall at the time of the first appearance for the Matriculation examination furnish the exact date of birth.

A candidate applying to be matriculated without appearing for the Matriculation examination of the University, shall furnish the date of birth as given in his S.S.L.C. register or as registered by the authority which conducted the examination which in his case has been considered equivalent to the Matriculation examination of the Andhra University.

* Vide page 250 infra.

Candidates who apply for post Intermediate examinations after passing an examination recognized as equivalent to the Intermediate or a corresponding examination of the Andhra University, shall be called upon to furnish the date of birth as given by them to the body conducting that examination at the time they applied for admission to the examination.

An entry once made shall not be altered so far as University purposes are concerned and will have to be repeated at subsequent examinations.

**Refund of fee.
Stat.**

4. No candidate for examination shall be entitled to a refund of any fee he may have paid, but the Syndicate may at its discretion grant such a refund in any particular case or class of cases.

**Qualifications
of candidates,
Regulation.**

5. Each candidate for an examination shall produce such evidence as the Syndicate may direct of having previously passed the qualifying examination prescribed by the Code if any. He shall also, unless otherwise exempted, produce in the prescribed form the necessary certificate or certificates required by the Code.

**Teacher and
Woman
Candidates.
Regulations.**

6. The Syndicate shall have power to exempt by a special order a candidate for a University examination belonging to any one of the following categories, from being an enrolled member of an affiliated college :—

- (i) Women ;
- (ii) Pandits and Munshis who hold an Oriental Title Diploma ;
- (iii) Commercial Instructors who have passed the concerned technical examinations and the Technical Teachers' Certificate examination of the Higher Grade conducted by the Secretary to the Commissioner for Government Examinations ; provided that in the case of commercial instructors of secondary schools employed prior to 23th November 1929 the possession of a Technical Teacher's certificate of the Higher Grade in commercial subjects need not be insisted upon ;

- (iv) Teachers who have put in an approved service of not less than five years and whose qualifications are such that there is no provision for them to take the Teachers' Training Certificate in their special subjects ; and
- (v) Any other teacher who has passed an examination in Teachers' training of the grade for which he is qualified by his general educational attainments:

Provided however that no one coming under (ii), (iii) and (iv) shall be considered eligible for exemption unless he has put in after passing the special examination noted against each at least three years service in a college affiliated to, or recognised by, the University or an institution situated in the Andhra University area recognised by the Syndicate after due enquiry or the Director of Public Instruction, Madras, or the District Educational Council;

Provided also that in the case of a Teacher (who has served in a recognised secondary or secondary training school for a period of at least three years after passing the Secondary Grade Training) appearing for the B. Ed. Degree Examination and satisfying the other conditions laid down above, the possession of a trained teachers' certificate of the Secondary Grade and of a certificate of having undergone the last term's intensive training on the collegiate grade on the practical side, shall be deemed sufficient.

No candidate however shall be permitted to present himself for an examination in a Science subject for which a practical course is necessary under the Regulations, unless he produces a certificate from the Principal of an affiliated college to the effect that the candidate has taken such a course in the laboratory attached to the said affiliated college.

The Syndicate shall satisfy itself in each case before granting exemption of the candidate's good conduct and diligent and regular study.

No person shall be considered eligible for exemption unless he or she has lived continuously within the area of affiliation of the University for a period of not less than two years immediately preceding the date of application for exemption or, in the alternative,

passed the examination of this University immediately below the examination for which exemption is sought, provided however that in the case of the latter category of candidates, service in any educational institution recognized by the Education Departments of a Provincial Government shall be deemed as equivalent to service in a recognized institution as prescribed above.

For purposes of this rule candidates employed in the inspection branch of the Educational Department shall be treated as though they are employed in the profession of teaching.

Exemption from
attendance
certificates :
Regulations.

7. In the case of a student who has failed to keep during the year three-fourths of the attendances prescribed by the institution of which he is a member and is therefore unable to produce his annual certificate of attendance, the Syndicate may grant exemption from its production, provided that—

For shortage
of attendance.

(1) the shortage of attendance does not exceed five days ;

(2) the case is recommended by the Principal of the College of which the student is a member ;

(3) the Syndicate considers that the reasons given for failure to secure the prescribed attendance are satisfactory.

Exemption in the case of students whose shortage of attendance exceeds 5 days shall be given only in exceptional circumstances. Exemptions in such cases may be granted by the Syndicate but each case should be reported to the Academic Council.

For students who
appeared for
examinations in
other Universities.

8. The Syndicate shall have power to grant exemption from the production of prescribed attendance and progress certificate for the first year course leading up to either the Intermediate or B. A. Pass or B. Com. Pass Degree Examination in the case of students who, after having undergone satisfactorily the prescribed course for the corresponding examination of any other University recognized by the University for the purpose, appeared for the examination of that University and for some satisfactory reason desire thereafter to appear for the Intermediate or B. A. Pass or B. Com. Pass Degree Examination of this University provided such students belong to the University area by being residents continuously for at least two

years in this University area, immediately prior to their joining the said course in the other University and provided also that they present the same subjects which they had studied in that University and for which there is provision in this University.

9. The Syndicate shall have power to grant exemption from the production of certificates of attendance for Part III of the Intermediate or B.A. Degree Examinations to a student, who, having passed Parts I and II under the New Regulations or Part I under the Old Regulations and failed in Part III or Part II as the case may be on at least two occasions, desires to present a new optional subject or set of optional subjects under Part III, provided that the new subject or subjects offered do not require a course of laboratory training.

For new optional subject in Inter. or B. A.

10. The Syndicate shall have power to grant exemption from production of the prescribed certificates of attendance for the course in any language other than English and Telugu in any part of the Intermediate or the B.A. Degree Examination to a student studying in a college in which the language in respect of which exemption is sought is not taught provided that the Syndicate is satisfied

For language course in Intermediate or B.A.

(1) as to the reasons assigned by the student for not studying in a college where the language in question is taught, and

(2) as to the arrangements made for instruction being received by the student in that language.

11. The Syndicate shall have power to grant exemption from the production of the prescribed certificate of attendance for one or more terms of the first year course in a non-science subject under Part III of the Intermediate Examination in the case of a student who, after having studied for some time in one of the affiliated colleges, has to leave that college due to unforeseen circumstances to prosecute his studies in another college, provided that the Syndicate is satisfied as to the reasons assigned by the student for not studying in the first college and with the arrangement made by the Principal of the new college for instruction being given to the student in the completed portions of the subject requiring exemption.

For students migrating from one college to another in middle of year.

For the Final
M. B. B. S.
Degree.

12. The Syndicate shall have the power to grant exemption in the case of a candidate for the Final M.B.B.S. Degree Examination who having failed in the examination is unable to produce an additional certificate of attendance for six months in one or more subjects of the examination in accordance with the Regulations, provided that he is recommended for exemption by the Principal of an affiliated Medical College.

For candidates
who passed
one part of the
M. U. B. A.
Degree
Examination
under the old
by-laws.

13. The Syndicate shall have the power to grant exemption from the production of the required attendance certificates, to candidates for the Degree of Bachelor of Arts who have passed at least one of the Divisions of the B. A. Degree Examination under the old by-laws of the Madras University and permit them to appear for the B.A. Degree Examination of the Andhra University in the Parts or Groups corresponding to the Divisions of the B.A. Degree Examination under the said old by-laws which they have not passed.

For B. Sc. Degree
holders with
one group to
appear for another
group.

14. The Syndicate shall have power to grant exemption from the production of the required attendance certificates to candidates who having passed the B. Sc. Degree Examination with one optional group are desirous of appearing for the same examination in another optional group, provided that there shall be an interval of at least one academic year between the passing of one optional group and appearance in another group and provided also that such candidates shall be required to produce a certificate of having completed a practical course from the Principal of a college affiliated in the subjects for which such certificates are required, to the effect that the candidate has undergone such a course satisfactorily in the laboratory attached to his college for a period of not less than one academic year, subject however to the condition that no candidate who has already passed any subject in one group, either as subsidiary or as main shall be required to undergo a practical course in that subject as a subsidiary nor shall he be required to sit for the examination in that subject as a subsidiary and pass thereat.

For B.A. Degree
holders with
one group to
appear for another
group.

15. The Syndicate shall have power to grant exemption from the production of the required attendance certificates to candidates who, having passed the B.A. Degree examination with one optional group, are desirous of appearing for the examination in another optional group, provided that there shall be an interval in each case

of at least one academic year between passing one optional group of the B.A. Degree Examination and appearance at another group and provided also that a candidate, in case he wishes to present himself in any subject for which a practical course is necessary under the Regulations, shall produce a certificate from the Principal of a College affiliated in that subject to the effect that the candidate has taken such a course in a laboratory for a period of not less than one academic year.

16. The Syndicate shall have the power to grant exemption from the production of the required attendance certificates to candidates who, having passed a Degree Examination other than the B.A. Degree Examination are desirous of appearing for the B.A. Degree Examination, provided that there shall be an interval in each case of at least one academic year between passing the first Degree Examination and appearance at the B.A. Examination and provided also that a candidate, in case he wishes to present himself in any subject for which a practical course is necessary under the Regulations, shall produce a certificate from the Principal of a college affiliated in that subject to the effect that the candidate has taken such a course in a laboratory for a period of not less than one academic year.

For other
Degree holders
to appear for
B. A. Degree.

17. The Syndicate shall have the power to grant exemption from the production of an annual certificate of attendance (1) to students who have been attending classes opened in a college with the sanction of the Syndicate pending affiliation, and (2) to students who are unable to obtain the necessary attendance certificate owing to the college of which they are members having to close for a time for reasons recognised by the Syndicate as satisfactory.

For students
undergoing
course pending
affiliation.

18. The Syndicate shall have the power to grant exemption from the production of either or both of the annual certificates of attendance required by candidates for the Oriental Title examinations provided that the candidate—

For Oriental
Titles.

(1) is at the time of the examination at least twenty-five years of age, subject to the provision that this age rule shall not apply in the case of (1) women candidates or (2) candidates who, after getting themselves qualified for one Oriental Title, wish to appear for another examination in Oriental Titles or a Certificate of Proficiency in Ori-

ental Learning, or (3) candidates who have passed the B.A. Degree Examination of this University or an examination recognized as equivalent thereto.

(2) is certified by the head of an affiliated or recognised institution, or by a member of the Board of Studies dealing with the subject or language offered for the examination or by a Mahamahopadhyaya or a Shamsul-ul-ulama or any other competent scholar, recognised by the Syndicate, to be qualified by his attainments to appear for the examination.

Dates of application.

19. All applications for exemption shall, as far as possible, be forwarded so as to reach the Registrar before the 1st October preceding the examination.

Exemptions permanent.

20. Orders of exemption granted under this Chapter shall be permanent.

CHAPTER XXXIV.

GENERAL RULES RELATING TO EXAMINATIONS

1. (a) Examinations shall be held at such places as may be appointed by the Syndicate. A list of centres at which examinations will be held shall be published annually in the *Gazette* in the preceding April. Place of Examinations. Ordinance.

- (b) When there is more than one centre for a written examination question papers shall be given out to candidates on the same day and at the same hour in every centre.

2. Gazetted holidays shall be considered *dies non* for the purposes of the University Examinations. Gazetted holidays *dies non*. Ordinance.

3. The text-books to be prescribed and the syllabus required by the Code other than those detailed in the Code shall be determined and notified from time to time by the Academic Council after considering the recommendations of the Boards of Studies. Text books and syllabuses. Regulation.

4. The papers set in all examinations shall be such as a candidate of decided ability well prepared in a subject can reasonably be expected to answer within the time allotted. Standard of question papers. Regulation.

5. No question shall be put at any University examination calling for a declaration of religious belief on the part of the candidate, and no answer or translation given by any candidate shall be objected to on the ground of its giving expression to any particular form of religious belief. Religious belief. Regulation.

6. All examinations, except practical and *viva voce* examinations, shall be conducted by means of printed or written papers to be answered, except in the case of Vernaculars or Asiatic Classical Languages, in English unless otherwise stated therein. Conduct of examinations. Regulation.

Provided that the question papers in non-language subjects, viz., Mathematics, Elementary Science and History and Geography, for the Matriculation Examination shall be set in English and shall be answered either in English or in the concerned Vernacular.

Duties of
Examination
Boards.
Ordinance.

7. The Examination Boards shall report to the Syndicate the results of all examinations conducted or supervised by them, and the Syndicate shall publish lists of those candidates who have passed the examinations in accordance with the regulations.

Pass
certificates.
Ordinance.

A certificate signed by the Registrar shall be given to each successful candidate at an examination other than an examination for a degree, title or diploma.

Applications
for certificates.

Applications for certificates of having passed the Matriculation and Intermediate Examinations shall reach the Registrar not later than the 1st September or 1st February succeeding respectively the March or September Examination. A fee of three rupees shall be charged for all certificates issued on applications received after that date.

CHAPTER XXXV.

16. A fee of Rs. 2 shall be charged for issuing an extract from the Register of Candidates for an examination or from the Register of Matriculates. **Extract from Registers. Ordinance.**
17. A fee of Rs. 5 shall be charged for supplying an Eligibility Certificate to eligible S.S.L.C. holders of the University. **Eligibility Certificate Ordinance.**
18. (a) The fee for registration of an application for admission to the University Colleges shall be Rs. 2. **University College Fees. Ordinance.**
- (b) The admission fee to the University Colleges shall be Rs. 5, which shall be paid together with the first fees payable to the University.
- (c) The tuition fee shall be Rs. 10 for Honours courses M. Sc. Degree Examination and Diploma courses in Science and Rs. 38 for Pass courses per term, each academic year consisting of three terms.

*Note :—*It shall however be competent for the Vice-Chancellor to sanction the levy of tuition fee at half the rate prescribed above for deserving poor students, preference being given to Mussalmans, Oriyas, girls and members of the backward classes and castes approved under Section 92 of the Madras Educational Rules, subject to the following conditions :—

- (1) Concession shall be given only in the case of those students whose parents or guardians have been proved to the satisfaction of the Vice-Chancellor as being so poor that without the grant of the concession it would not be possible for those students to continue their studies.
- (2) That the students are natives of the districts within the territorial jurisdiction of the Andhra University.
- (3) That certificates of poverty, if any, submitted by the students shall be from the Principals of affiliated Colleges or officers of the Revenue Department of rank not lower than that of a Deputy Tahsildar and shall indicate the approximate annual income from all sources of the parent or guardian.
- (d) The fees for residence shall be those prescribed by the Syndicate from time to time.
- (e) The games or athletics fee shall be Rs. 3 per term which shall be paid with the tuition fee for each term.
- (f) The Reading Room and Magazine fee shall be Rs. 3 per term which shall be paid with the tuition fee for each term.
- (g) The library fee shall be Rs. 2 per term which shall be paid with the tuition fee for each term.
- (h) The University Union fee shall be Re. 1 per term which shall be paid with the tuition fee for each term.
- (i) The laboratory fee (in the case of the Jeypore Vikrama Deo College of Science and Technology) shall be Rs. 5 per term which shall be paid with the tuition fee for each term.

- (j) The stationary fee of Re. 1 per year shall be paid with the tuition fees for the second term.

The above fees are compulsory for all students, and shall be paid within a week of the commencement of the term. The penal fee for the non-payment of fees on due date shall be reckoned at annas 4 for each day intervening between the due date and the date of payment or one rupee per week, whichever is less. Should however the period of default extend beyond fifteen days, the student's name shall be removed from the roll of the College and shall not be re-entered during the course of the term till all the prescribed fees and an additional penal fee of Rs. 5 are paid. Penal fees on defaults extending beyond a term shall be decided by the Syndicate.

19. The fee for registration of an application for admission to the course in Librarianship shall be Rs. 2 and the tuition fee per term for the course shall be Rs. 20.

Librarianship
Course-Fees.
Ordinance.

20. Information as to whether a candidate's answers in any particular head or heads of any examination have been valued and marked will be supplied to the candidate on his forwarding, in case he is a candidate appearing from any college, through the Head of the Institution, and in case he is a private candidate, directly, within one month of the declaration of the results in the examination in question, an application accompanied by a fee of Rs. 25 for each head. If as a result of the verification made under this clause it is discovered that there has been an omission to value or mark any answer or answers or a mistake in the totalling of the marks, the fee for verification shall be refunded to the applicant.

The fee is only for verification whether the candidate's answers in any particular head have been valued and whether the totalling has been correct and not for re-valuation of answers. No answer paper shall be re-valued by an examiner after the marks have once been sent to the Registrar.

CHAPTER XXXVI.

MATRICULATION.

(Regulations).

**Matriculation
of S. S. L. C.
holders.**

1. Subject to such rules and directions as the Syndicate may issue from time to time, holders of completed Secondary School Leaving Certificates issued under the authority of the Government of Madras or such other authority as may have been accepted by the Syndicate, may be admitted by the Head of an affiliated college to a University course of study, and when so admitted shall be registered as Matriculates of the University. Women holders of such certificates who wish to study privately for the Intermediate Examination may submit their certificates to the Syndicate, and the Syndicate, if satisfied with their certificates, shall order their registration as Matriculates of the University.

**Matriculation
of those other
than S. S. L. C
holders.**

2. Other candidates for Matriculation shall be required to pass some other examination accepted by the Syndicate as equivalent thereto.

**Register of
Matriculation.**

3. The Registrar shall maintain a register of all the Matriculates of the University.

*Note.—The following examinations have been recognized by the Academic Council, in accordance with Section 33 (1) of the Act, as equivalent to the Matriculation Examination of the Andhra University:—

S.S.L.C. Public Examination conducted by the Local Government.

European High School Examination.

Matriculation Examination of any other Statutory Indian University.

Mysore S.S.L.C. Examination.

Hyderabad (Deccan) High School Leaving Certificate Examination (1st and 2nd Class Certificates only).

Travancore E.S.L.C. Examination.

Cochin S.S.L.C. Examination.

Royal Indian Military College Diploma.

Cambridge Senior Certificate Examination.

London Matriculation Examination.

Oxford School Certificate Examination.

“Dufferin” Final passing out Certificate Examination in respect of both Executive and Engineering cadets.

High School Examination, Board of High School and Inter. Education, Rajputana, Central India and Gwalior, Ajmeer.

The High School Examination conducted by the Board of High School and Intermediate Education, Allahabad.

The High School Examination conducted by the Board of Secondary Education, Delhi.

CHAPTER XXXVII.

MATRICULATION EXAMINATION.*(Regulations).*

1. No candidate shall be admitted to the Matriculation Examination unless he shall have completed the age of fifteen years on or before the first day of the examination; provided that the Syndicate may exempt from the operation of this Regulation any candidate who is specially recommended for such exemption by the Head Master of the school of which he is a pupil and who produces a certificate of physical fitness from a registered Medical Practitioner. Applications for such exemption must be forwarded so as to reach the registrar before the 1st of December preceding the examination. **Conditions of admission.**

2. Unless specially exempted by the Syndicate no candidate who is not a pupil of a recognized high school shall be permitted to appear for the examination.

3. A candidate who fails to pass the examination on the first occasion shall, on the next occasion on which he seeks admission to the examination, forward a second certificate in the form prescribed under Regulation 8 of Chapter LVII. No further certificates need be produced for subsequent appearances.

4. Schools falling under any of the following classes shall be recognized by the University:— **Recognition of Schools.**

(a) Schools recognized by the Director of Public Instruction of Madras as teaching up to the standard of the Matriculation Examination.

(b) Schools in Ceylon certified by the Director of Public Instruction, Ceylon to be organized and conducted so as to ensure efficient training up to the standard of the Matriculation Examination.

(c) Schools in Indian States of Southern India certified by the Darbars of the States in which they are situated to be organized and conducted so as to ensure efficient training up to the standard of the Matriculation Examination.

**Exemption
from attendance
certificate.**

5. The Syndicate shall have the power to exempt from the production of the prescribed certificate of attendance (a) candidates who hold completed Secondary School-Leaving Certificates issued under the authority of the Government of Madras or such other authority as may have been accepted by the Syndicate and who have twice appeared for the Final Examination qualifying for such certificates, (b) candidates who, during the previous three years have been educated privately or in schools outside the territorial limits of the Andhra University, and (c) women candidates, provided that in each case they produce satisfactory evidence that they are of good character and that they have received suitable instruction. Applications for exemption from the production of the certificate of attendance should be forwarded so as to reach the Registrar before the 1st October preceding the examination.

**Courses of
study and
subjects for
examination.**

6. The examination shall comprise five divisions: (i) English Language; (ii) Second Language; (iii) Mathematics; (iv) Elementary Science; (v) History and Geography.

(i) English Language.

Text books shall be prescribed of which a detailed knowledge may be required.

There shall be two-papers set upon the English language: one-paper of two-and-a half hours' duration, which shall be mainly upon the prescribed texts, and shall be designed to test the candidate's proficiency in composition and his knowledge of grammar and idiom; and one paper of two-and-a half hours' duration, which shall consist of (a) composition and paraphrase not based on the texts, and (b) the conversion, expansion and condensation of sentences. Some of the exercises in the second paper shall be based on the texts. Paraphrase shall be treated as a test of the candidate's power to understand and give the general meaning of passages of prose and poetry.

(ii) Second Language.

One of the following languages at the option of the candidate:—

- (a) Classical—Sanskrit, Arabic, Persian.
- (b) Foreign—French, German.
- (c) Modern Indian Languages—Telugu, Kannada, Tamil, Oriya, Sinhalese, Hindi, Urdu, Marathi, Malayalam.

In each classical or foreign language there shall be one paper of three hours' duration divided into two parts, of which the first shall contain passages for translation from the text-books and questions on grammar and idiom, and the second shall contain unseen passages for translation from the selected language into English and from English into the selected language. To the second part of the paper not less than half the total number of marks shall be assigned.

In each of the modern Indian languages there shall be one paper of three hours' duration divided into two parts, of which the first shall contain questions on the text-books and on grammar and idiom, and the second part shall consist of original composition. The text prescribed shall be mainly in modern prose. To the second part of the paper not less than half the total number of marks shall be assigned.

(iii) *Mathematics.*

There shall be two papers set in Mathematics, one in Arithmetic and Algebra of three hours' duration, and the other in Geometry of two-and-a-half hours' duration

(a) *Arithmetic.*—The principle and process of Arithmetic applied to whole numbers and vulgar and decimal fractions. The metric system. Approximations to a specified degree. Contracted methods of multiplication and division of decimals. Practice, ratio and proportion. Square and cubic measure. Direct application of the term *per cent*; including interest, present-worth, profit and loss, exchange. Square root.

(b) *Algebra.*—Symbolical expression of general results in Arithmetic. Algebraical laws and principles and their applications. Factorization of simple functions. Equations, conditional and identical. Equations of the first degree in one, two and three variables and the principles involved in their solution. Solution of problems by means of such equations. Equations of the second degree in one variable and the principles involved in their solution. Theory of positive integral indices. Square root. Graphs of simple algebraic functions. A working knowledge of logarithms (a knowledge of the theory is not required).

(o) *Geometry—Experimental.*—Construction of lines, angles, circles, perpendiculars, parallels, tangents, chords, triangles and regular polygons from given data. Division of lines in given ratios. Bisection of angles. Graphical extraction of Arithmetical square roots.

Theoretical.—Angles at a point. Parallel straight lines. Triangles and rectilinear figures. Areas. Ratio and proportion of similar triangles. Simple loci. Elementary propositions on circles. Proofs of the constructions in Experimental Geometry. Easy deductions.

A detailed syllabus in Geometry will be prescribed from time to time.

(iv) *Elementary Science.*

There shall be one paper of three hours' duration in Elementary Science comprising Elementary Physics and Elementary Chemistry, as defined in a syllabus.

(v) *History and Geography.*

There shall be two papers set in History and Geography each of two hours' duration.

(i) *History.*

(1) Outlines of the History of Great Britain and Ireland—a period or periods, as defined in syllabus, to be prescribed each year.

(2) Outlines of the History of India—a period or periods as defined in a syllabus, to be prescribed each year.

(ii) *Geography.*

(1) Geography of India, Great Britain and Ireland, as defined in a syllabus.

(2) Geography of Europe, Asia, Africa, America and Australia, as defined in a syllabus.

7. A candidate shall be declared to have passed the examination if he obtains not less than forty per cent of the marks in the English language and not less than thirty-five per cent of the marks in each of the remaining divisions, provided that a candidate who fails to obtain the required minimum in one subject only but who passes in English and gains fifty per cent of the total number of marks shall be declared to have passed. All other candidates shall be deemed to have failed in the examination.

Marks qualify
ing for a pass.

Successful candidates who obtain not less than sixty per cent of the aggregate marks shall be placed in the first class and ranked in the order of proficiency as determined by the total marks obtained by each. Successful candidates who obtain less than sixty per cent and not less than fifty per cent of the aggregate shall be placed in the second class and ranked in the order of proficiency as determined by the total marks obtained by each. All other candidates who pass shall be placed in the third class.

Classification
of successful
candidates.

SYLLABUSES.

1. Theoretical Geometry.

Angles at a point.—If a straight line stands on another straight line, the sum of the two angles so formed is equal to two right angles; and the converse.

If two straight lines intersect, the vertically opposite angles are equal.

Parallel straight lines.—When a straight line cuts two other straight lines, if

- (i) a pair of alternate angles are equal, or
- (ii) a pair of corresponding angles are equal, or
- (iii) a pair of interior angles on the same side of the cutting line are together equal to two right angles,

then the two straight lines are parallel; and the converse.

Straight lines which are parallel to the same straight line are parallel to one another.

Triangles and rectilinear figures.—The sum of the angles of a triangle is equal to two right angles.

If the sides of a convex polygon are produced in order, the sum of the angles so formed is equal to four right angles.

If two triangles have two sides of the one equal to two sides of the other, each to each, and also the angles contained by those sides equal, the triangles are congruent.

If two triangles have two angles of the one equal to two angles of the other, each to each, and also one side of the one equal to the corresponding side of the other, the triangles are congruent.

If two sides of a triangle are equal, the angles opposite to these sides are equal; and the converse.

If two triangles have the three sides of the one equal to the three sides of the other, each to each, the triangles are congruent.

If two right-angled triangles have their hypotenuses equal and one side of the one equal to one side of the other, the triangles are congruent.

If two sides of a triangle are unequal, the greater side has the greater angle opposite to it; and the converse.

Of all the straight lines that can be drawn to a given straight line from a given point outside it, the perpendicular is the shortest.

The opposite sides and angles of a parallelogram are equal; each diagonal bisects the parallelogram, and the diagonals bisect one another.

If there are three or more parallel straight lines, and the intercepts made by them on any straight line that cuts them are equal, then the intercepts made by them on any other straight line that cuts them are also equal.

Areas.—Parallelograms of the same altitude on the same or equal bases are equal in area.

Triangles of the same altitude on the same or equal bases are equal in area.

Equal triangles on the same or equal bases are of the same altitude.

Illustrations and explanations of the geometrical theorems corresponding to the following algebraical identities:—

$$k(a+b+c+\dots) = ka+kb+kc+\dots$$

$$(a+b)^2 = a^2 + 2ab + b^2$$

$$(a-b)^2 = a^2 - 2ab + b^2$$

$$a^2 - b^2 = (a+b)(a-b)$$

$$(a+b)^2 - (a-b)^2 = 4ab$$

$$(a+b)^2 + (a-b)^2 = 2a^2 + 2b^2$$

The square on a side of a triangle is greater than, equal to or less than the sum of the squares on the other two sides, according as the angles contained by those sides are obtuse, right or acute. The difference in the cases of inequality is twice the rectangle contained by one of the two sides and the projection on it of the other.

Loci.—The locus of a point which is equidistant from two fixed points is the perpendicular bisector of the straight line joining the two fixed points.

The locus of a point which is equidistant from two intersecting straight lines consists of the pair of straight lines which bisect the angles between the given lines.

The locus of the vertices of all triangles which have the same base and the sum of squares of their sides equal to a given square is a circle having its centre at the middle of the base.

The locus of the vertices of all the triangles which have the same base and the difference of the squares of their sides equal to a given square is a straight line perpendicular to the base.

The locus of the vertices of all the triangles which have the same base and their vertical angles equal to a given angle is the arc of a segment of a circle.

The Circle.—A straight line drawn from the centre of a circle to bisect a chord which is not a diameter, is at right angles to the chord; conversely, the perpendicular to a chord from the centre bisects the chord.

There is one circle and one only, which passes through three given points not in a straight line.

In equal circles (or, in the same circle) (i) if two arcs subtend equal angles at the centres, they are equal; (ii) conversely, if two arcs are equal they subtend equal angles at the centres.

In equal circles (or, in the same circle) (i) if two chords are equal, they cut off equal arcs; (ii) conversely, if two arcs are equal, the chords of the arcs are equal.

Equal chords of a circle are equidistant from the centre; and the converse.

The tangent at any point of a circle and the radius through the point are perpendicular to one another.

If two circles touch, the point of contact lies on the straight line through the centres.

The angles which an arc of a circle subtends at the centres is double that which it subtends at any point on the remaining part of the circumference.

Angles in the same segment of a circle are equal; and if the line joining two points subtends equal angles at two other points on the same side of it, the four points lie on a circle.

The angle in a semi-circle is a right angle; the angle in a segment greater than a semi-circle is less than a right angle; and the angle in a segment less than a semi-circle is greater than a right angle.

The opposite angles of any quadrilateral inscribed in a circle are supplementary ; and the converse.

If a straight line touches a circle, and from the point of contact a chord be drawn the angles which the chord makes with the tangent are equal to the angles in the alternate segments.

If two chords of a circle intersect either inside or outside the circle, the rectangle contained by the segments of the one is equal to the rectangle contained by the other ; and the converse.

Ratio and Proportion.—(a) Definition and elementary theorems connecting the antecedents and consequents.

A given straight line can be divided internally in a given ratio at one and only one point and externally at one and only one point.

A straight line drawn parallel to one side of a triangle cuts the other two sides or those sides produced, proportionally ; and the converse.

If the vertical angle of a triangle is bisected internally or externally the bisector divides the base internally or externally into segments which have the same ratio as the other sides of the triangle ; and the converse.

In equal circles, angles, whether at the centres or circumferences, have the same ratio as the arcs on which they stand.

If two triangles have one angle of the one equal to one angle of the other, their areas are proportional to the rectangles contained by the sides about the equal angles. Similarly for parallelograms having one angle of the one equal to one angle of the other.

Similar Triangles.—If two triangles are equiangular, then their corresponding sides are proportional ; and the converse.

Two triangles, which have one angle of the one equal to one angle of the other and the sides about these equal angles proportional, are similar.

The areas of similar triangles are in the ratio of the squares of the corresponding sides.

2. Elementary Science

[The examination shall test whether the subjects included in the following syllabus have been taught by the aid of the experimental demonstration—wherever this is possible. The application of physical and chemical facts and principles to experience in ordinary life should receive particular attention.

It is desirable that, as far as the accommodation and equipment of the school will allow, pupils receive practical instruction in the physical and chemical processes included in the syllabus.]

a. *Physics*—Measurement of length. Meaning of a unit and the measurement of a physical quantity. British and metric unit; their multiples and sub-multiples. Derived units of area and volume. Measurement of area and volume. (a) *Physics*.

Measurement of time. Unit of time. Rotation of the earth. Measurement by simple pendulum.

Speed; its measurement involving length and time; calculation of speed in given cases. Elementary ideas regarding acceleration. Illustration of First Law of Motion, definition of force.

Matter : definitions. Measurement of mass. British and metric unit; determination of mass by spring balance, and by ordinary balance. Density and specific gravity.

Gravitation : All matter attracted by the earth; illustration of Second Law of motion ; attraction is mutual ; illustration of Third Law of Motion. Universality of gravitation Weight of a body. Distinction between mass and weight.

Properties of matter: extension, inertia, gravitation, divisibility, porosity, hardness, elasticity, transparency and opacity, cohesion, ductility, malleability, brittleness, plasticity, viscosity. The three states of matter. Changes of state produced by heating and cooling. Permanent and temporary effects of heating different substances : effects on organic substances ; tempering of metals.

Simple machines: The lever: its general principle and application to the common balance, and the wheel and axle. The pulley, and the inclined plane : application to the screw.

Centre of gravity; definition. Experimental determination of centre of gravity in simple cases. Condition of equilibrium of a body resting in a given position, stable, unstable and neutral equilibrium. The common balance ; how mass is measured by weighing.

Solids : Permanence of shape and volume which are only altered by application of forces.

Liquids: no permanent shape. Surface of liquid at rest horizontal. Pressure defined. In fluids it acts in all directions and is greater at greater depths. Transmission of pressure and its evaluation. Bramah Press. The principle of Archimedes; its experimental proof and applications.

Gases: how distinguished from liquids. Gases have weight. Balloons. Pressure of the atmosphere; the mercury barometer; variation of atmospheric pressure with height proved by mercury barometer; the water barometer. Evaluation of pressure of atmosphere by means of barometer; applications, Air-pump; Water pump. Pressure of a gas; Boyle's Law,

Temperature: Liquids expand by heat; the special case of water. Thermometer used for measuring temperature by observing change of volume of liquid. The mercury thermometer; method of graduating; determination of fixed points; fundamental interval; the Centigrade and Fahrenheit scales. Thermal expansion of solids, liquids and gases.

Distinction between heat and temperature: Heat as a quantity and how it may be measured: the thermal unit; specific heat. Changes of physical state due to heat. Fusion and latent heat of fusion; evaporation and ebullition and latent heat of evaporation. Water vapour present in the atmosphere and determination of its amount. Cooling produced by solution and evaporation; freezing mixtures. The conduction and convection of heat; convection currents in the atmosphere and ocean; the trade winds; land and sea breezes and gulf stream. The circulation of water vapour in the atmosphere, clouds, rain.

Light: Rectilinear transmission. Rays and pencils of light, shadows etc. produced by different sources, and images of sources produced by pin-holes. The laws of reflection of rays of light: reflection of pencils by plane mirrors and images formed by plane mirrors. Direct reflection of pencils from concave spherical mirrors; experimental proof of law of distances. The laws of refraction of light: refraction of rays through a plate and a prism. Refraction through a convex lens; experimental proof of law of distances; the principle focus of a lens. Image formed by a convex lens; the simple microscope; the photographic camera; the telescope. Analysis of white light by a prism; the method of producing, and order of colours in the spectrum. The spectrum of sun light, and of candle light. Recombination of the colours of the spectrum into white light.

Electrification by friction; positive and negative electrifications. Laws of attraction and repulsion. Conductors and non-conductors. Simple voltaic cell; Grove's cell. Electric current. Magnetic effects of currents in straight and coiled wires. Simple galvanometer. Heating effects of currents. Simple facts of electrolysis.

Magnetic substances. Laws of magnetic attraction and repulsion. Magnetic induction. Methods of magnetization.

Graphic representation by use of squared paper of the relation between any two of the physical quantities referred to in the syllabus.

(b) Chemistry

b. *Chemistry*.—Examples of mixtures and solutions; (1) sand and sugar, (2) sulphur and iron filings, (3) sand and sal ammoniac, (4) copper sulphate and water. Explanation of the processes of separating the ingredients of these mixture, filtration, decantation, mechanical or magnetic separation, evaporation, distillation, sublimation.

Chemical compounds, Characteristic differences between compounds and mixtures; illustrations.

Chemical combination illustrated by (1) candle burning in air, (2) sulphur burning in air, (3) magnesium wire burning in air, (4) quick lime combining with water.

Chemical decomposition illustrated by (1) heating mercuric oxide, (2) action of sodium on water, (3) heating potassium chlorate, (4) heating lead nitrate.

Iron in contact with air and water is converted into rust. Rusting is oxidation. Copper, lead, mercury, magnesium, sulphur and phosphorus, also oxidize: but their oxidation takes place at different temperatures. Rapid oxidation. Combustion of candle; the products of the combustion are heavier than the candle itself. One of these products is a gas which turns lime-water milky and it is the same product which is obtained when charcoal burns in air. Water is another product of the combustion. Similar observation may be made and similar conclusions deduced when oil burns in air. Structure of a candle flame.

The rust or oxide is always heavier than the substance from which it is formed. When a substance (e.g., iron or phosphorous) oxidises in a confined volume of air, about one-fifth of the air ultimately disappears. Remaining air is inactive (e. g., candle will not burn in it.) Composition of air has two components: active (oxygen) and inactive, (nitrogen).

Oxygen; its discovery; its mode of preparation and properties. Oxides; products formed when a candle, charcoal, sulphur, phosphorous, sodium or iron burns in Oxygen. Burning in oxygen and air compared. Illustrations of acid and alkaline properties.

Hydrogen produced by the action of sodium on water. Products of the decomposition. Same gas is produced by dilute sulphuric acid or hydrochloric acid on zinc, or on iron. Properties of hydrogen; its density; and its combustion with air or oxygen. Water the sole product of this combustion.

Elements and compounds: Two ways of determining the composition of compounds (i) by synthesis (ii) by analysis; illustrated by the case of water. Synthesis of water (i) by burning hydrogen in air or oxygen, (ii) by passing hydrogen over heated copper oxide. Analysis or decomposition (i) by action of sodium on water. (ii) by passing steam over red hot iron filings, and (iii) by electric current. Composition of water by weight and by volume. Constancy of composition of chemical compounds illustrated by the case of water, Solvent action of water, crystallization, forms of crystals, water. Solvent action. Solubility of gases in water, carbonic acid gas, air and oxygen. Soda water, spring, river, well and sea water. Suspended and dissolved impurities. Purification by distillation. Extraction of salt from sea water by evaporation; salt pans.

Carbon : the different forms in which it occurs, their properties and uses. Carbon burnt in air or oxygen produces carbon dioxide. This gas is always formed when candles, oil, etc., burn. Its preparation and properties. Action on lime-water exhaled by living animals ; action of plants on carbon dioxide. Solution of carbon dioxide in water and properties of the solution. Hard and soft water ; permanent and temporary hardness. Methods of softening hard water.

Nitrogen the inactive constituent of air ; preparation and properties. Two of its important compounds, *viz.*, nitric acid and ammonia.

(a) Nitric acid, its preparation from nitre and sulphuric acid. Its properties ; power of dissolving copper and mercury and many other metals. Relations between acids, bases and salts illustrated by (1) nitric acid and caustic soda (2) magnesium oxide and sulphuric acid, (3) lime and hydrochloric acid.

(b) Ammonia, its preparation and properties. Solubility in water ; power of neutralizing acids and forming salts, such as ammonium chloride and nitrate ; behaviour of these salts on heating.

Hydrochloric acid and chlorine, Treatment of common salt with sulphuric acid and production of hydrochloric acid gas. Properties of this gas ; solubility in water. Production of chlorine from hydrochloric acid and manganese dioxide. Its properties : its power of combining with hydrogen and with metals, such as antimony, to form chlorides. Bleaching action of chlorine.

Sulphur ; the different forms : their properties. The changes induced by heat—when burnt in air or oxygen produces sulphur dioxide. Sulphuric acid—its properties and uses.

Phosphorus ; the different forms, their properties and uses.

Silicon ; occurrence in nature. Chief compound silica. Occurrence of silica in nature, free and combined as silicates. Chief forms of silica, quartz, sandstone, flint.

Metals and non-metals, their general properties.

Sodium and potassium ; their occurrence and properties. Distinguishing properties of the alkali metals ; their more important compounds, common salt, Glauber's salt, washing soda, sodium bicarbonate, caustic soda, potassium carbonate, potassium chlorate, caustic potash, saltpetre, potassium permanganate. Gunpowder.

Calcium. Chief compound calcium carbonate. Its occurrence and various forms. Limestone burnt into lime in lime-kilns. Slaked lime. The use of lime in making mortar and plaster.

Calcium sulphate ; gypsum and plaster of Paris.

The occurrence, general method of preparation, properties and uses of the following Metals:—

Zinc, iron, copper, mercury, lead and silver. Their chief oxides and their salts which have been used or produced in experiments and illustrations included in the above syllabus.

3. History of Great Britain and Ireland

Pre-norman Period.—The early inhabitants of Britain: their modern descendants; what languages they speak, where they live. The Roman occupation; Agricola. The coming of the English; their original homes: their chief tribes. The conversion of the English. Celtic and Roman Christianity: the supremacy of the latter, reasons and results; the struggle for supremacy between the Heptarchy Kingdoms: the supremacy of Wessex. The coming of the Northmen; who they were, the results of their coming. The struggle between Wessex and the Northmen: the victory of Wessex. Alfred: Athelstan: Edgar: Dunstan. The Danish conquest: reasons: Canute. The English line restored.

The Norman and early Plantagenet Period.—The Norman conquest: its causes and effects. Character of the Norman kings and of their rule. Feudalism. The opposition of the baronage to the royal power. The anarchy of Stephen's reign. Order restored by Henry II. His aims: his quarrel with Becket: reasons and results. The reforms of Henry II. His foreign possessions: extent. His quarrel with the barons. The loss of Normandy its effects. The baronage of a national party struggle with John: the Great Charter. The weak rule of Henry III: subservience to the Papacy; foreign favourites. The barons' war: Simon de Montfort, his character and aims. Revival of the monarchy under Edward I: effect of the baronial war seen in his reforms. The beginnings of Parliament. The conquest of Wales. The attempted conquest of Scotland. Scotland and France. Edward II's reign. Bar mockburn: temporary supremacy of the baronial party.

The later Plantagenet Period —Edward III's reign. The Hundred years' War: causes: Sluys: Crecy: Poitiers: the treaty of Bretigny: the Black Prince. Increased power of the parliament. Social and economic changes: the Black Death: its results: Wat Tyler: the Peasants' Rebellions. The attempted autocracy of Richard II: his overthrow. Literary activity: Langland and Chaucer. The Lancastrian kings: the strength of Parliament at the beginning. Beginnings of dynastic troubles. Early religious reforming movement: Wycliff: the Lollards. Rebellions against Henry IV. Renewal of the Hundred years' War: reasons. Havre Agin-court: the treaty of Troyes. The minority of Henry VI: failure in the Hundred years' War: reasons; close of Hundred Years' War: effects. Renewed social troubles. Outbreak of

dynastic Wars of the Roses: causes: chief events. Warwick, 'the King-maker. The Yorkist Dynasty: its character and aims: reasons for its power. The effects of the Hundred Years' War on English political, commercial and social life.

The Tudor Period.—The strength of the Tudor possession of the throne. Their despotic rule. The overthrow of rival claimants. The final suppression of the old baronage. The creation of a new subservient baronage. The need for peace. Henry VII's policy. Henry VIII's character. The career of Wolsey: foreign policy. Ecclesiastical reform: the Reformation in England: its cause. The overthrow of the Papal authority. The phases of the Reformation in England under Henry VIII, Edward VI, Mary and Elizabeth. Comparison with continental Reformation: Luther and Calvin. Social results of the Reformation: the rebellions under Edward VI: Elizabeth's Poor Law. The jealousy of England and Spain: causes. English navigators: the development of English commerce. Elizabeth's foreign policy: the war with Spain: its results. Literary activity of the sixteenth century: its connections with the Reformation and the Renaissance. The three religious parties under Elizabeth: the Roman Catholics: the Anglicans: the Puritans: their aims and characteristics: chief sects of Puritans. The Anglicans: supreme: policy of uniformity: abstinence of idea of toleration. The Puritans and royal political supremacy.

The Stuart Period.—King and Parliament. The difference between the absolutism of the Tudors and the Stuarts. Suppression of the Roman Catholics: attempted suppression of the Puritans by James I. Growing hostility to royal power: the influence of Puritanism in the party of opposition. The chief points of dispute between the Crown and Parliament. The failure of Charles I's foreign policy: increased opposition met by further claims of the prerogative. The Petition of Right. Temporary victory of the Crown. Renewed opposition over Ship Money and Laud's religious policy. The Bishop's Wars. Summoning of Parliament. Early acts of Long Parliament. Outbreak of Civil War: immediate and remote causes. Chief events of the war. The victory of the Parliament: reasons; Breach between the Parliament and the Army. The execution of Charles I. The Commonwealth: rule of the Puritan Minority. Cromwell in Ireland and Scotland. The Protectorate: Cromwell's character and aims. Reasons of his success and the failure of his system. The Restoration: why possible. Net gains of the Rebellion. Puritan Literature: Milton: Bunyan. The despotic and Catholic policy of Charles II and James II: the ministers of Charles II: his French intrigues. The Whigs and Tories: their respective aims. The exclusion Bill. Temporary triumph of absolutism. Its overthrow at the Revolution: James's rashness compared with Charles's discretion.

The Bill of Rights: the triumph of Parliament. James II in Ireland: William III and Scotland. The beginnings of Party Government under William III and Anne: the unscrupulousness of party politicians: Harley. St. John:

Marlborough. The reforms of Williams III : the Act of Settlement. The wars with France : causes. Marlborough as a general : the chief events of the war. The treaty of Utrecht : English colonial gains.

The Hanoverian Period.—The Whig supremacy : Reasons for the discredit of the Tories. 1715 rebellion. The rise and power of Walpole, his policy and method. The establishment of Party Government with Prime Minister and Cabinet. The reasons for Walpole's long tenure of Office. The rise of an opposition. The Family Compact : hostility With Spain and France : reasons. Overthrow of Walpole. Whig supremacy continued with a war policy. The rise of the Elder Pitt. The war of the Austrian succession : England's share in it. Colonial rivalry of France and England. The Seven Year's War : its phases : chief events. English gains in 1763. Pitt as a popular minister : his character and aims. The colonial policy of Pitt's successors : the loss of the American colonies. Chief events. Overthrow of the Whig supremacy ; reasons for the weakness of the Whig party. Final check to royal control of politics.

The Revolutionary Period.—The Tory rule of the Younger Pitt. Internal reforms and domestic policy of Pitt : comparison with the policy of Walpole. The outbreak of the French Revolution : Pitt forced into war. The revolutionary and Napoleonic wars : Chief events on sea and land. Death of Pitt ; his character.

Nelson and Wellington : their careers and characters. Reasons for the success of England at sea. The role played by England in resisting the Napoleonic schemes. The downfall of Napoleon. Religious and literary activities of the period : Wesley : Burke. The industrial development : its nature and causes.

The 19th Century. (1815-1902) : The influence of the French Revolution in England. The great period of reform. Economic and social evils : their causes and remedies : riots : socialist movements : the Chartists : the repeal of corn laws : Sir Robert Peel Cobden and Bright and free trade : factory laws : the spread of education. Political reform : the extension of the franchise : Cabinet government : municipal reforms. Great ministers of the period : Russell : Palmerston : Disraeli : Gladstone : Salisbury. Colonial expansion during the period. Wars of the period : mainly frontier and colonial : the Crimean war : the Boer war : causes, results and chief events. The life and influence of Queen Victoria. Great poets and novelists of the century.

4. Indian History

Pre-Mussalman Period :

1. Physical configuration of India. Distribution of land and water : mountains, rivers and the sea. Position in relation to the rest of the world. Historical consequence of the foregoing.

2. The aboriginal and non-Aryan races.

8. The Indo-Europeans (so-called Aryans). Their immigrations and settlement. Aryan culture. Social and economic conditions. Caste (till circa 500 B.C.)

4. Social economic, religious and political conditions in the sixth century B.C. Jainism and Buddhism. The growth of the kingdom of Magadha.

5. The satrapy of Darius (circa 500 B. C.). The invasion of Alexander, Its consequences and results.

6. Breakdown of local independence. The Mauryan Empire. Chandragupta. Asoka. Social, religious and economic conditions under the early Mauryans.

7. The disruption of the Mauryan empire. Rivalry between Brahminism, Buddhism and Jainism and the Prakrit dialects and Sanskrit. The Sunga, Kanva and Andhra dynasties (circa A.D. 250).

8. Foreign influence, invasions and immigrations. Indo-Greek, Indo-Bactrian, Indo-Parthian, and Indo-Scythian dynasties. Revival of Buddhism. Kanishka's empire. Graeco-Roman influence. The Great Satraps of the West. Religious and social conditions (till circa A.D. 300).

9. The Gupta dynasty and empire. Brahmanic revival. Literary activity. Religious and social conditions. Fa Hian,

10. The Huns, break up of the Gupta empire.

11. The reign of Harshavardhana. Social, economic and religious conditions (till circa A.D. 650). Hsuen Tsang. The early Chalukyan empire in the Dekhan. The Pallavas in South India.

12. Minor local dynasties in North India—Kabul, Punjab, Sindh; Magadha, Kanauj, Delhi; Bohar and Bengal: Bundelkhand and the Central Provinces; Ajmir, Malwa and Gujarat.

13. The empire of the Dekhan to circa A.D. 1800—The early Chalukyas, the Rashtrakutas, the later Chalukyas and the Yadavas of Devagiri.

14. The South Indian supremacy. The Pallavas. The Chola supremacy. Cheras and Pandyas. Hoysalas and the Kakatiyas. Economic and social conditions. Dravidian literary and religious activity.

Medieval India (to circa 1761) :—

1. Early Muhammadan invasions.

2. Mahamud of Ghazni; Mahamud of Ghor. The Slave, Khalji, Tughlak, Shahi dynasties. Social, religious and literary conditions (circa A.D. 1400).

3. Break up of the empire of Delhi. Local Muhammadan dynasties in Jaunpur, Bengal, Malwa and Gujarat.

4. The Bahmani kingdom of the Dekhan; its break up, 1526; final conquest and absorption by the Mughal Empire.

5. History of the empire of Vijayanagar till A.D. 1565. The successors of Vijayanagar to circa 1750.

6. Rajputana till A.D. 1556.

7. The Great Mughals, 1526-1707

8. The Maharathas to 1714.

9. Routes of Indo-European trade. The Siracen conquests and the results on Indo-European commerce. The age of discovery. The Portuguese in India. Albuquerque. Causes of the decline of the Portuguese power in India (till circa 1600.)

10. The decline of the Mughal empire 1707-1761. The Maratha conquests, 1714-1761. Rise of the Sikhs. Panipat.

Modern India down to the death of Queen Victoria :—

1. Importance of sea power in Indian History. Early English attempts to reach India. Rivalry between the Dutch and the English till 1623. The French in India till 1741.

2. The Karnatic wars. Duplex and Clive. French supremacy in South India. The English in Bengal. The Black Hole tragedy. Plassey. Final French attempt. Coote and Lally (till 1761).

3. The administration of Bengal, 1758-1771.

4. Rise of Haider Ali. The First Mysore war. The revival of the Maratha Confederacy. Madhava Rao Peshawa (till 1772).

5. Warren Hastings—English politics and Indian affairs (1748-72). The Regulating Act. Rohillas. Benares. The first Maratha and second Mysore wars. Effects of the American war. Suffren on the Indian seas. The First Armed Neutrality. Successful end of Hastings' administration. His work. Pitt's India Bill.

6. Cornwallis and Sir John Shore.—The Mysore war, Economic and administrative reforms. The policy of non-intervention.

7. Wellesley.—England and revolutionary France. War with Tippu. The second Armed Neutrality. The battle of Aboukir Bay. The Subsidiary System. Second and third Maharatha wars, Minor reforms. Wellesley's work.

8. Cornwallis and Minto. Administrative reforms. Conference of Tilsit. Capture of Java.

9. Marquess of Hastings and Lord Amherst. Ghurka war. The Pindari war. Last Maratha war. Extinction of the Peshwaship. First Burmese war. The Bhartpur affair. Internal affairs.

10. Bentick—His reforms.

11. Auckland and Ellenborough.—Rise and history of Ranjit Singh. Afghanistan and Punjab. The first Afghan war and the 'avenging expedition.' Conquest of Sindh Gwalior affairs.

12. Hardinge and Dalhousie.—The first and second Sikh wars. Annexation of the Punjab. The second Burmese war. The doctrine of lapse. Dalhousie's annexations. Railways and Telegraphs.

13. Canning.—The Mutiny. Canning's clemency. The Queen's proclamation. India under Crown. Financial and military reforms.

14. India under the Crown to the death of Queen Empress Victoria.

5. Geography

1. *South Continents.*

Australia.

1. Relief and Rivers of Australia.
2. Climate of Australia. The Seasonal distribution of temperature and rain fall.
3. Vegetation and animals; relation between rainfall and natural vegetation; regions of Australia; peculiarity of its animal life.
4. Life and work of the people with special reference to (a) East Coast Region. (b) Murray-Darling Basin. (c) Mediterranean regions of West Australia and Victoria.
5. Favourable position for trading with lands around the Pacific and Indian Ocean.

Africa.

6. Structure—effect upon the coastline, rivers and lakes of Africa, relief and drainage.
7. Climate and vegetation of Africa; apparent seasonal migration of the sun and the duplication of climatic and vegetation belts North and South of the Equator.
8. Chief Natural Regions of Africa.

9. Peoples of Africa.

10. Trade routes of the Indian Ocean.

South America

11. Structure and relief; rivers.

12. Climate and vegetation of South America; the effect of a mountain barrier, of a cold current and of altitude upon rainfall and temperature; Andean Zones.

13. People and states of South America; the importance of minerals in the past and present development of the continent.

14. Temperate countries of South America—Argentina, Uruguay and Chile.

15. Tropical countries of South America—Brazil—the world's chief store house of tropical products.

16. Revision of the three southern continents.

II. North America.

1. Structure and relief; the work of rivers as illustrated on a large scale by the Colorado and Mississippi and as seen by actual observation of local streams.

2. Climate and vegetation: factors that modify climate as evidenced in North America; natural regions of North America.

3. Population and political divisions, immigration.

4. United States—

(a) North-eastern industrial and commercial region.

(b) South-eastern plantation region.

(c) Central farming region.

(d) The basins and mining regions of the Rockies.

(e) Pacific shorelands—fruit, grain, timber and minerals.

5. Dominion of Canada and Newfoundland.

(a) Eastern Canada—agriculture, dairying, timber, fisheries, mining and manufacture.

(b) Prairie provinces.

(c) British Columbia.

6. Mexico, Central America and West Indies.

7. Transport and communications of North America and important links in round-the-world routes.

III. Eurasia and India

1. Surface, relief and rivers of Eurasia.
2. Climate of Eurasia : the major climatic regions, comparison of temperature ; conditions on east and west margins ; effect of latitude and distance from the sea on range of temperature, causes of monsoons and their effect on climate of South-east Eurasia.
3. British Isles : relief ; influence of the sea and the climate upon the life and activities of the people ; fisheries and farming ; the chief industrial regions and their outlets.
4. Western Mainland of Europe.—France—agriculture and industry ; position of Paris and Marseilles. Belgium—plain of Flanders and the Sambre-Meuse, Valley. Holland—a delta land reclaimed from the sea ; its colonies and sea trade. Denmark—co-operative dairy farming. Germany—plain and plateau, forestry and development of social industries ; industries of the Ruhr and Saxon coalfields.
5. Baltic Region—the new border states ; Scandinavian peninsula—forestry and woodwork of Sweden.
6. Central Highlands of Europe ; Czecho-Slovakia its minerals and industries ; agriculture of the Mid-Danubian plain. Alpine region—development of hydro-electric power and effect on industrial development.
7. Mediterranean region—influence of climate on plant adaptation and fruit culture. Spain—its mineral wealth but lack of coal. Italy—alluvial plain of Lombardy and its industrial development—peninsular Italy.
8. South-western lands of Asia—region of plateau and deserts with one important alluvial plain ; its historical importance as a highway.
9. Central and Northern Eurasia—rich wheat and pasture lands of Rumanian and Russian plains—desert conditions of the Aral Sea Basin ; tundra, taiga and steppes of Siberian plain ; contrast development of this region with similar region in North America.
10. China—her dependencies. Effect of climate and relief upon occupations and industries.
11. Japan.—A mountainous country, yet productive ; agricultural, mineral and industrial development—importance of Korea.
12. South-east Asia and the East Indies.
13. Position, relief, soils and minerals of India and Burma.
14. Climate of India ; her chief climatic regions ; means of irrigation.
15. Vegetation and animal life of India.
16. Peoples of the Indian Empire.

17. Survey of the Provinces and States—

- (a) Mountain States.
- (b) Great Plain.
- (c) Plateau states and provinces.
- (d) Madras.
- (e) Bombay.

18. Occupations and industries of India.

19. Trade, transport and seaports.

20. Ceylon.

IV. The World.

1. Studies in climate—size and shape of the earth—movements of the earth, day and night, the seasons, annual and seasonal distribution of temperature, pressure winds and rainfall, ocean currents, natural vegetation.

2. Regions of the world—

- (1) Tundra and Ice-cap.
- (2) The Cold Forests.
- (3) Broad-leaved Forests.
- (4) Temperate grasslands.
- (5) Mediterranean Lands.
- (6) Desert Lands.
- (7) Equatorial forests and tropical grasslands.
- (8) Monsoon Lands.
- (9) Islands of the Pacific.
- (10) High mountain and plateau.
- (11) Industrial Regions of Europe.
- (12) Industrial Regions of North America.
- (13) Regions of the Empire.

*Books recommended :**Text-books—*

- (1) The New Regional Geographies—Book IV, The World:
Leonard Brooks, London University Press.
- (2) Any one of the following:—
 - (a) India, World and Empire: Herbert Pickles, Oxford University Press.

(b) Our World: Morrison. Macmillan.

(c) Our World: Morrison and Subrahmanyam. Macmillan.

(d) The World: Dudley Stamp. Longmans, Green & Co.

Reference books for teachers—

(1) Physiography: Herbertson, Oxford University Press.

(2) Every one's Book of the Weather: Franco Williams; Sheldon Press.

(3) Out-door Geography: Hasted. Blackie.

(4) Surface of the Earth: Pickles. Cambridge University Press.

(5) Human Geography for Secondary Schools: Fairgrieve and Young, G. Philip and Son.

(6) A Graded Course of Geography: E. S. Price. G. Philip & Son.

(7) The Rambler Travel Books. Blackie.

(8) The World: Howarth & Bridewell, Oxford University Press.

CHAPTER XXXVIII.

INTERMEDIATE EXAMINATION IN ARTS & SCIENCE

(Regulations.)

1. Matriculates proceeding to a University course of Study shall, for two years each consisting of three terms ordinarily consecutive, undergo in an affiliated college courses of study in the following three parts :—

Courses of
Study.

Part I—English.

Part II—Second Language.

One of the following languages at the option of the candidate—

(a) Classical—Sanskrit, Latin, Arabic, Persian, Pali.

(b) Modern European—French, German.

(c) Modern Indian—Telugu, Kannada, Tamil, Oriya, Hindi, Urdu.

Part III—Any three of the following subjects provided however no candidate shall be permitted to offer any combination of subjects not approved in the foot-note to this section :

* The following combinations are approved :—

1. Mathematics, Physics, Chemistry,
2. Mathematics, Physics, Logic.
3. Mathematics, Physics, Geography.
4. Mathematics, Physics, Accountancy and General Commercial knowledge.
5. Mathematics, Physics, British History.
6. Mathematics, Indian History, Logic.
7. Physics, Chemistry, Zoology.
8. Physics, Chemistry, Botany.
9. Physics, Chemistry, Geography.
10. Physics, Chemistry, Agriculture.
11. Physics, Chemistry, Logic.
12. Chemistry, Zoology, Botany.
13. Chemistry, Zoology, Agriculture.
14. Chemistry, Botany, Agriculture.
15. Indian History, British History, Ancient and Mediaeval History.
16. Indian History, British History, Logic.
- * 17. Indian History, British History, Economics and Banking.
18. Indian History, British History, Economic Geography and Economic History.
19. Indian History, British History, Agriculture.

(Continued at the bottom of the next page).

- (1) Mathematics
- (2) Physics
- (3) Chemistry
- (4) Botany
- (5) Zoology including Human Physiology
- (6) Geography
- (7) Logic
- (8) Indian History
- (9) Ancient and Mediaeval History
- (10) British History
- (11) A Classical language different from the classical language if any taken under Part II.
- (12) Economic Geography and Economic History.
- (13) Economics and Banking
- (14) Accountancy and General Commercial knowledge.
- (15) Agriculture
- (16) Electrical Engineering
- (17) Mechanical Engineering
- (18) Surveying
- (19) Drawing
- (20) Music

Transitory Regulations

(i) For the benefit of candidates who failed in September 1935 or earlier in languages, each forming as one of the optional subjects under Part III of the Intermediate Examination, the examination

(Continued from the bottom of the previous page)

20. Indian History, Ancient and Mediaeval History, Logic.
21. Indian History, Logic, a Classical Language.
22. Indian History, Ancient and Mediaeval History, a Classical Language.
23. Indian History ; British History, a Classical Language.
24. Accountancy and general Commercial knowledge, Economics and Banking
Economic Geography and Economic History.
25. Accountancy and general Commercial knowledge, Economics and Banking,
Mathematics.
26. Accountancy and general Commercial knowledge, Economic Geography and
Economic History, Logic.
27. Accountancy, and general Commercial knowledge, Economic Geography
and Economic History, Indian History.

(Continued at the bottom of the next page)

in those languages (with the same syllabuses and text-books in force up to the examination of 1935) will be held under Part III of Intermediate Examination in March-April and September 1936. Thereafter no examination in those languages will be held and the candidates who fail in them in 1936 examination shall be permitted to offer any other subject approved by the Syndicate provided the new combination is one of those approved by the Academic Council.

(ii) For the benefit of candidates who failed in Ancient History as one of the optionals under Part III of the Intermediate Examination in 1935 or earlier, an examination in that subject shall be held in March and September 1936.

2. (i) The course of study in English under Part I shall English. consist in—

- (a) the detailed study of certain of the set books.
- (b) the perusal as distinct from detailed study of the other set books.

For this course books in English Prose and Poetry shall be prescribed. The books prescribed under (a) above in any year shall not be more than one play of Shakespeare ; about 900 lines of Modern Poetry and two prose books while those prescribed under (b) above shall not exceed two books.

(ii) The course of study in a second language under Part II Second language. shall consist in the detailed study in all the languages of the prescribed text-books and in the case of Modern Indian Languages the perusal also as distinct from detailed study of the prescribed books.

(iii) The course of study in the subjects under Part III shall Optional subjects. be as prescribed in the syllabuses appended to this chapter.

(Continued from the bottom of the previous page)

- 28. Accountancy and general Commercial knowledge, Economic Geography and Economic History, British History.
- 29. Indian History, Ancient and Mediæval History and Music.
- 30. Indian History, Modern History and Music.
- 31. Indian History, Logic and Music."

Note :—Candidates shall be permitted to offer a classical language under Part III, if it is not studied under part II.

As for the languages the course shall be as indicated or regulated by the text-books which will be prescribed from time to time.

First appearance.

3. A candidate applying for the examination on the first occasion shall appear for all the three parts of the examination and thereafter may appear for any part or parts of the examination

Subjects or
examination
and duration
of papers.

4. A candidate shall be examined in—

Part I—*English*. There shall be three papers in English each of three hours' duration.

The first paper shall be on the books of poetry set for detailed study. The second paper shall be on the books of prose set for detailed study. The third paper shall be on composition and shall contain exercises designed to test the candidate's power to apply the principles studied in the course; in particular, it shall contain (a) exercises in epitomising and paraphrasing passages of prose and poetry which shall not be taken from any of the books prescribed for detailed study or for perusal and (b) subjects for two short essays drawn from the subject matter of the books prescribed for perusal as distinct from detailed study and from topics of general interest. The papers in the examination shall be so set that candidates shall be able to get full marks in the examination without answering questions on matters relating to purely literary criticism or scholarship.

Part II—*A second language*. There shall be two papers, each of three hours' duration, the first on prescribed text-books on prose and poetry and applied grammar, and the other on (1) translation from and into English of seen and unseen passages in the case of classical languages, or (2) Composition, subjects for which will be selected from the set books prescribed for non-detailed study and translation from and into English of passages unseen by the student in the case of Modern European and Indian languages.

The following will come into effect as from the examination of 1940 :—

Add the following at the end of the matter under Part II :

Note.—In the case of Telugu, not more than one question carrying 20 % of the total marks for the whole paper shall be set on Grammar (as per syllabus prescribed) in paper on prescribed text-books.

Part III—*Special subjects.* There shall be six papers, two in each of the three subjects selected, all of $2\frac{1}{2}$ hours each.

Botany First Paper will contain questions on Part I of the syllabuses and Botany Second Paper will contain questions on Part II of the syllabuses.

Third language.—In the case of classical languages there shall be two papers, the first paper being set on prescribed text-books of easy prose and poetry, and the second on translation from and into English of seen and unseen passages.

The text-books for each of the languages shall be prescribed from time to time on the recommendations of the Boards of Studies concerned.

5. A candidate shall be declared to have passed the Intermediate Examination if he obtains (1) not less than 35 per cent of the marks in English under Part I, (2) not less than 35 per cent of the marks in a Second Language under Part II and (3) not less than 35 per cent of the mark in each of the three special subjects selected under Part III. Marks qualifying for a pass.

All other candidates shall be deemed to have failed in the examination.

Out of candidates who pass in all the three Parts at one and the same examination, those who obtain fifty per cent and more of the total number of marks shall be placed in the first class and ranked in the order of proficiency as determined by the total marks obtained by each, and those who obtain less than fifty per cent of the total number of marks shall be placed in the second class. Classification of successful candidates.

Candidates who pass in all the Parts at the same examination and obtain not less than sixty per cent in Part I or Part II or in any subject of an optional group under Part III shall be declared as having gained distinction in that subject.

Candidates who obtain the prescribed minimum number of marks in each part in separate examinations and are declared to have passed the whole examination shall be placed in a separate list in the second class.

(Transitory Regulations).

6. No examination under the old Regulations (i.e. in force prior to the academic year 1928-29) shall be held as from the Intermediate Examination of March 1931.*

7. Candidates for the Intermediate Examination who commenced their courses of study for that examination under the Regulations in force prior to the academic year 1928-29 shall be permitted to complete the Intermediate Examination under the new Regulations subject to the following provisions :—

- (a) A candidate who has passed Part I of the examination under the old Regulations shall be deemed to have passed in Parts I and II under the new Regulations.
- (b) A candidate who has passed Part II of the examination under the old Regulations shall be deemed to have passed in Part II under the new Regulations.
- (c) A candidate who has failed in both parts of the examination under the old Regulations shall be required to pass in all the three parts of the examination under the new Regulations provided that he shall take for Part II of the examination under the new Regulations the same language in which he appeared for Part I-B of the examination under the old Regulations and for Part III of the examination under the new Regulations the same subject in which he appeared for Part II of the examination under the old Regulations, it being at the option of candidates who took Group (ii) (Natural Science, Physics and Chemistry) under the old Regulations to offer any three of the following subjects :—Botany, Zoology, Physics and Chemistry—for the examination under the new Regulations. It shall be permissible in the case of candidates coming under this Regulation to take two languages under Part III of the New Regulations and the Examination in those languages shall in each be as for an advanced course in a second language.

*For the old Regulations *vide* Appendix to the A. U. Code for 1929-30.

On and after the 1st June 1929 candidates for the Intermediate examination who had completed the first year's course of study prescribed for the examination under the Regulations in force immediately prior to the academic year 1928-29 and had earned the attendance and progress certificates prescribed for that year and were unable to complete the course under those Regulations, will be permitted to complete the second year course of study by attending classes under the new Regulations and to appear for the examination under the new Regulations. They shall be exempted from the production of attendance certificates required for the first year of the course.

SYLLABUSES

Part II. Telugu.

Applied Grammar

I.

1. ఆంధ్రవర్ణ సమాహ్వా యము:—అచ్చులు, హల్లులు, ఉభయములు, హ్రస్వములు, దీర్ఘములు, పరుషములు, సరళములు, స్థిరములు.
2. కళాదృతప్రకృతికములు.
3. సంధులు.
 - (i) ఆకారసంధి, ఇకారసంధి, ఉకారసంధి, ఆమ్రేడితసంధి, ప్రకృతిప్రత్యయసంధి, సంహితలో యడాగమము.
 - (ii) దృతముపైని అచ్చు నిలచునప్పటి కార్యములు :—అవసానదృత కార్యములు, సరళస్థిరపరకదృతసంధి, సరళాదేశసంధి.
 - (iii) సమాస సంధి.
 - (iv) సామాన్యములగు సంస్కృత సంధికార్యములు:—సవర్ణదీర్ఘ సంధి, గుణసంధి, పృథ్వీసంధి, యణాదేశసంధి.

II.

4. ఛందఃప్రకరణము.
 - (i) గురు లఘు సామాన్యలక్షణము.
 - (ii) మాతృగణములు, ఇంద్ర నూర్వగణములు

(iii) యతిపాసముల స్వరూపము. (దిక్షాత్రము.)

(iv) కందము, తేటగీతి, ఆటవెలది, సీసము, ద్విపద, ఉత్పలమాల, చంపకమాల, శార్దూలము, మత్తేభము—వీని లక్షణములు.

5. అలంకారప్రకరణము :—ఉపము, రూపకము, ఉత్పేక్ష, అతిశయోక్తి, స్వభావోక్తి, అర్థాంతరన్యాసము.

Part III—(1) Mathematics.

In addition to the portions prescribed for the Matriculation the course shall comprise Algebra, Plane Trigonometry and Geometry. A Candidate shall be required to be acquainted with the use of logarithmic tables and to be able to solve questions by graphic methods.

(a) *Algebra*.—Algebraical laws and principles and their applications. Ratio and proportion. Theory of indices.

Elementary Theory of Logarithms. Variation. Simple surds. Solution of equation of the second degree in one or two variables and of equations of higher degree whose solution depends on them. Theory of the equations and expression of the second degree in one variable. The three progressions and other series whose summation depends on arithmetical and geometrical series. "Permutations and combinations where the things are all unlike." The Binomial theorem for the positive integral exponent and direct applications of the theorem for any exponent.

(b) *Plane Trigonometry*.—Measurement of Angles. Trigonometrical functions and their relations to one another. Solution of simple trigonometrical equations. Addition, multiplication and division formulae. Properties of triangles, and of the circles connected with them. Solution of triangles, Application of logarithms to trigonometrical computations, measurements and distances.

(c) *Geometry* (1) *Pure Geometry (plane)*.—Similar figures, Concurrence and collinearity. Properties of triangles. Properties of circles. Harmonic Sections.

N.B.—The order in which the theorems are stated in the Syllabus is not imposed as the sequence of their treatment and practical questions may be asked in the examination bearing directly on the theory.

Similar Figures.—If two triangles are equiangular their corresponding sides are proportional and the converse.

If two triangles have one angle of the one equal to one angle of the other and the sides about these equal angles proportional, the triangles are similar.

Two triangles are similar, if the sides of the one are respectively parallel or perpendicular to the sides of the other.

If two triangles have two sides of the one proportional to two sides of the other, and an angle in each opposite one corresponding pair of these sides equal, the angles opposite the pair are either equal or supplementary.

If from the right angle A of a right-angled triangle ABC, AD is drawn perpendicular to BC, then (1) AD is the mean proportional between BD and DC, (2) BA is the mean proportional between BD and BC and (3) CA is the mean proportional between CD and BC.

If two triangles are similar, their corresponding lines such as medians, altitudes, inradii, etc. are to one another in the ratio of their corresponding sides.

Similar triangles are to one another as the squares on their corresponding sides.

Two similar polygons can be divided into the same number of triangles similar to each other and similarly placed; and the converse.

The perimeters of two similar polygons are to each other as any corresponding sides.

Concurrence and Collinearity—The use of signs as applied to lines, angles and areas. If two parallel lines are cut by three or more concurrent transversals, the corresponding segments are proportional and the converse.

If X, Y, Z are points in the sides BC, CA, AB of a triangle ABC, such that the perpendiculars to these sides at these points are concurrent, then

$$(BX^2 - XC^2) + (CY^2 - YA^2) + (AZ^2 - ZB^2) = 0;$$

Or $BX^2 + CY^2 + AZ^2 = CX^2 + AY^2 + BZ^2$
and the converse.

If any transversal meets the sides BC, CA, AB of a triangle in D, E, F, then

$$AF \cdot BD \cdot CE = AE \cdot CD \cdot BE.$$

and conversely, if the three points D, E, F, taken on the sides BC, CA, AB of a triangle, satisfy the relation $AF \cdot BD \cdot CE = AE \cdot CD \cdot BF$, then, D, E, F, are collinear.

If the lines joining any point to the vertices A, B, C of a triangle meet the opposite sides in D, E, F, then

$$AF \cdot BD \cdot CE = FB \cdot DC \cdot EA.$$

and conversely, if three points D, E, F, taken on the sides BC, CA, AB of a triangle, satisfy the relation $AF \cdot BD \cdot CE = FB \cdot DC \cdot EA$, then AD, BE, CF are concurrent.

If two unequal similar figures are similarly placed, the lines joining the vertices of one to the corresponding vertices of the other are concurrent.

Properties of Triangles.—The three medians of a triangle meet in a point, and this point is a point of trisection of each median, and also of the line joining the circumcentre to the orthocentre.

If D is a point in the side BC of a triangle ABC such that BD equals $1/n$ BC, then

$$(n-1) AB^2 + AC^2 = n \cdot AD^2 + (1-1/n) BC^2$$

The perpendiculars from the vertices of a triangle on the opposite sides meet in a point, and the distance of each vertex from the orthocentre is twice the perpendicular distance of the circumcentre from the side opposite to that vertex.

The circle through the middle points of the sides of a triangle passes also through the feet of the perpendiculars of the triangle and through the middle points of the three lines joining the orthocentre to the vertices of the triangle.

If a perpendicular drawn from the vertex to the base of a triangle is produced to meet the circumcircle, then the distance of this point of intersection from the base is equal to the distance of the orthocentre of the triangle from the base.

The feet of the perpendiculars drawn on the sides of a triangle from any point P on the circumcircle of that triangle are collinear.

The pedal line of P bisects the line joining P to the orthocentre of the triangle.

If the vertical angle of a triangle is bisected by a straight line which cuts the base, the rectangle contained by the side of the triangle is equal to the rectangle contained by the segments of the base together with the square on the straight line which bisects the angle.

If from the vertical angle of a triangle a straight line is drawn perpendicular to the base, the rectangle contained by the sides of the triangle is equal to the rectangle contained by the perpendicular and the diameter of the circle described about the triangle.

Properties of Circles.—The locus of the points of intersection of tangents drawn at the extremities of chords of a circle which pass through a fixed point, is a straight line.

If the polar of A passes through B, then the polar of B passes through A.

If P and Q are any two points in the plane of a circle whose centre is O, then OP bears to OQ the same ratio as the perpendicular from P on the polar of Q bears to the perpendicular from Q on the polar of P.

The locus of points from which the tangents to two given co-planar circles are equal is a line perpendicular to the line of centres.

In two circles, if any two parallel radii are drawn (one in each circle), the straight line joining their extremities cuts the line of centres in one or other of two fixed points (called centres of similitude).

If through a centre of similitude S of two circles, a line is drawn cutting the circles, the radii to a pair of corresponding points are parallel.

If through a centre of similitude S of two circles, a line is drawn cutting the circles, then the rectangle under the distances of one pair of non-corresponding points from S is equal to the rectangle under the distances of the other pair of non-corresponding points from S ; and each of these rectangles is a constant.

(1) *Harmonic Section* :—

If AB is divided harmonically at P and Q then (i) PQ is divided harmonically at A and B ; (ii) AB is a harmonic mean between AP and AQ .

If AB is divided harmonically at P and Q , and if O be the middle point of AB , then $OP \cdot OQ = OA^2$ and the converse.

Any chord of a circle through a fixed point P is *divided harmonically* by P and the polar of P .

(2) *Plane Analytical Geometry*:—

The straight line and circle referred to rectangle axes.

Co-ordinates of a point: Distance between two points: Co-ordinates of a point dividing a segment of a line in a given ratio. Area of a triangle whose vertices are given.

Equations of a straight line (i) in terms of its gradient and the interception of the y -axis; (ii) in terms of the length of the perpendicular from the origin and its inclination to the axis; (iii) passing through a point and having a given gradient.

(3) *Passing through two given points*:—

Co-ordinates of the point of intersection of two straight lines, and the angle between them; conditions of perpendicularity and parallelism of two straight lines; Distance of a point from a straight line: Equations of a circle in the forms.

$$x^2 + y^2 = a^2 \text{ and } x^2 + y^2 + 2gx + 2fy + c = 0$$

Condition that a given straight line may touch a circle (by using the property that the distance from the centre is equal to the radius).

In the Intermediate Examination, there shall be two written papers of two hours and a half each, and each shall carry 50 marks. The first paper shall deal with Algebra, Trigonometry and the second paper shall deal with Geometry, pure and analytical.

Part III—(2) Physics

No question shall be asked which cannot be answered by simple mathematical methods.

The course shall include a more detailed study of the matter included in the Matriculation syllabus and in addition the following:—

Dynamics.—The units of length and time. Displacement, speed, velocity and acceleration of a particle moving in a straight line, Newton's laws of motion; the units of mass and force. Motion of a particle in a straight line under the action of a force in that line and in a verticle plane under the action of gravity. Energy, work, power and their units. Simple illustrations of the conservation of energy.

*Conditions of equilibrium of a body under three concurrent forces (the parallelogram law), and under parallel forces, Centre of gravity. Simple machines.

*The motion of simple pendulum, determination of g.

Hydrostatics.—Pressure at a point in a fluid; definition and illustrations; transmissibility of pressure. Evaluation of pressure at a point in a heavy fluid at rest; its uniformity in all directions. Resultant thrust in simple cases. The principle of Archimedes, floating bodies, hydrometers. Applications to practical determination of density and specific gravity: The pressure of a gas and its determination; the barometer. Boyle's Law; air pumps and water pumps.

Heat.—Temperature and its measurement; the construction and graduation of thermometers. The thermal expansion of solids, liquids and gases and their accurate determination; the air thermometer. Heat as a quantity; the unit of heat, specific heat and the more direct methods of calorimetry, Laws of fusion, evaporation and ebullition; latent heat; vapour pressure and how it is measured. Conduction and convection of heat; thermal conductivity. Radiation; absorption and reflection; law of cooling. The dynamical equivalent of heat; the conservation of energy.

Light.—The experimental facts and laws of transmission, reflection and refraction of light; simple geometrical deductions from these, applicable to .

*Only experimental proofs are required in these cases.

small direct pencils incident on plane and spherical surfaces. Applications to the lens, telescope, microscope. The dispersion of light; the spectroscope. Radiation and absorption spectra. Total reflection. Determination of refractive indices.

Magnetism:—properties of magnets; poles; Laws of magnetic force; unit poles. Lines of force; uniform magnetic fields and experimental methods of comparing them.

The earth magnetic field; the compass. Magnetic Induction; the magnetic properties of iron and steel.

Electricity.—The more common forms of voltaic cells and the actions that go on in the cell while producing a current. The action of currents on magnets; galvanometers depending on such action including suspended coil type. Metallic conductors and electrolytes; laws of electrolysis. Electromotive Force; Ohm's Law; resistance and the simple methods of determining it. Dissipation of energy in circuit by current and heating effects. Electromagnet. Potentiometer and measurement of E. M. F.

Sound.—The production and propagation of sound; the velocity of sound in air and its determination. Nature of wave motion and sound waves; Frequency of vibration; pitch, Amplitude of vibration; loudness. Laws of vibration of strings and air columns. The deflection of sounds: echoes.

PRACTICAL PHYSICS.

The following scheme is not exhaustive, but is intended to indicate the general nature and extent of the course of Instruction in Practical Physics for the Intermediate Examination in Arts and Science.

Length measurements by millimeter scale, vernier, micrometer gauge, and spherometer.

Determination of areas and volumes by Measurement of linear dimensions.

Verification of conditions of equilibrium of a body under co-planar forces.

Determination of the centre of gravity of a plate.

Verification of the law of simple pendulum: determination of g.

The inclined plane: systems of pulleys.

Use of balance sensitive to .01 gram.

Determination of volumes by weighing in water; determination of capacities of vessels.

- Reading Fortin's barometer and correcting for temperature.
- Specific gravities of solids and liquids ; use of hydrometer.
- Verification of Boyle's law.
- Determination of fixed points of a Thermometer.
- Determination of co-efficient of expansion of a rod.
- Determination of co-efficient of apparent expansion of a liquid.
- Expansion of air at constant pressure.
- The constant volume gas thermometer.
- Curves of cooling : melting points.
- Determination of specific heats of solids and liquids.
- Latent heat of water and steam.
- Determination of vapour pressures : boiling points.
- Use of Regnault's (or Dines') wet and dry bulb hydrometers.
- Comparison of thermal conductivities.
- Radiation of heat from different surfaces.
- Verification of Laws of Reflection.
- Tracing the path of ray of light through a block of glass and deduction of refractive index.
- Focal lengths of concave mirrors and convex lenses.
- Arrangement of two lenses for telescope' microscope and lantern.
- Measurement by spectrometer of the angle of a prism, and the refractive index for sodium light.
- Use of simple photometers.
- Tracing the lines of force in a magnetic field.
- Comparison of magnetic moments.
- Comparison of strength of magnetic field vibration.
- Study of the simple cell, the Daniel and Leclanche cells.
- Absolute measure of current (i) by tangent galvanometer, (ii) by electrolysis.
- Measurement of heat development by current.
- Measurement of resistance of wires.

Comparison of electromotive forces, the potentiometer.

Verification of laws of transverse vibration of strings.

Determination of velocity of sound by resonance.

Part III - (3) Chemistry.

The course shall include a more detailed study of the matter included in the Matriculation syllabus and, in addition, the following:—

The laws of chemical combination by weight and by volume. Atomic theory; symbols and their use. Equivalents. Atomic weights. Molecular weights. Avogadro's hypothesis and the relation of gas density to molecular weight. Chemical equations and calculations; nomenclature.

A general knowledge of the properties of the elements and of the chief types of their compounds with a view to their classification. Elementary ideas of the periodic law and mass action.

The ordinary methods of preparation and the chief properties of the following elements and their principal compounds; hydrogen, oxygen, halogens, sulphur, nitrogen, phosphorus, arsenic, boron, carbon and silicon.

Chief sources, preparation and properties of the common metals. viz., sodium, potassium (ammonium), silver, mercury, lead, copper, zinc, magnesium, calcium, barium, aluminium, iron, manganese, chromium, tin, and the preparation and properties of their oxides, hydroxides and their salts with the more common negative radicals.

COURSES OF INSTRUCTION IN PRACTICAL CHEMISTRY.

The practical instruction in Chemistry in the Intermediate Course shall be on modern lines, such as are indicated in Dr. Alex. Smith's Experimental Inorganic Chemistry.

Tables, such as Clarke's Mathematical and Physical Tables (published by Oliver and Boyd, Edinburgh), are recommended for use by students undergoing the Intermediate Course of Study in Physical Science.

Part III - (4) Botany.

First Part:—

1. Living and non-living things and their main features; protoplasm; cell; cell structure; cell division; changes seen in the cell contents and the nature of the cell wall; meristem; increase in the plant body and division of labour; tissues.

Organic and inorganic substances and their main properties; plants and animals—differences and resemblances; similarity of vital functions such as feeding, respiration, movement, response to stimuli and reproduction.

2. Green leaf; its external and internal structure; photo-synthesis—parasitic flowering plants, insectivorous plants; transpiration; adaptations to facilitate and check transpiration; leaf form and internal structure as well suited to carry on the above two functions.

Leaf adjustments to light; phototropism; arrangement of leaf on the plant; struggle for light among plants; climbing plants and epiphytes.

General leaf forms; stipules and their work; modifications of leaves and stipules.

3. Root—its external form and internal structure; apex of root; work of roots; absorption and fixation; root cap; root hairs; region of root hairs; osmosis, root pressure.

Study of the soil; structure and nature of the soil in relation to water contents.

Branching of roots; elongation and growth of roots in thickness; different kinds of roots; modifications of roots; response of roots to gravity: light and water.

4. Stem:—work of the stem; support; and conduction; its internal structure; apex of the stem; path of the sap current; intercellular spaces: lenticel; increase of the stem in thickness; cork formation; hard wood and sap wood; modifications of the stem; response of the stem to gravity and light; stems of water plants.

Second Part:

5. Flower—parts of flower; functions of different parts; pollen grains; pollen tube; ovule; egg cell; fertilisation; seed formation; parts of a seed; germination. Arrangement of the parts of a flower; insect visitors cross and self pollination, wind pollination and inconspicuous flowers; inflorescences;

Fruits; kinds of fruits; seed and fruit dispersal and its advantages; vegetative reproduction.

A study of the following families: Anonaceae; Malvaceae; Capparideae; Leguminosae; Cucurbitaceae; Rubiaceae; Compositae; Convolvulaceae; Solanaceae; Asclepiadaceae; Acanthaceae; Labiateae; Euphorbiaceae; Hydrocharideae; Liliaceae; Musaceae; Palmaeae.

6. Euglena—structure and locomotion; all the life functions carried out by the single cell.

A brief account of *Chlamydomonas*, *Pandorina*, *Volvox* origin of Soma.

Life histories of *Ulothrix*; origin of sex; *Spirogyra*; *Oscillacia*; *Sargassum* (only external characters); Moss; Fern.

External Characters of *Gymnosperms* (*Cycas*) and *Angiosperma*.

7. Bacteria—their structure and life history: Fermentation; Enzymes; Symbiosis, Pathogenic bacteria: Fungi; Parasites; Saprophytes; Yeast plant; Mucor; Mushroom.

Struggle for existence; survival of the fittest; variety; species; heredity and evolution.

8. Plant products—starch; oils, sugars; alkaloids; gums; resins; caoutchouc; fibres; the plants and the parts of the plants producing them;

Practical Work :—Students are expected to examine with hand lens the external features of all the plants and to be able to refer the plants to their families. They should be able to prepare free hand sections of the various parts of the plant body for microscopical examination and identify the prepared slides of the forms mentioned in paras 6, 7 and 8. Special attention must be given to experimental demonstrations of the various physiological functions of the plant organs.

In the Intermediate Examination there shall be two written papers in Botany, viz., Botany I, and Botany II. Each paper is for two hours and a half and each shall carry 50 marks.

Part III—(5) Zoology including Human Physiology.

Zoology.

The chief characters of living organisms. Protoplasm, Cell. Plants and animals; how they agree and how they differ. Meaning of the terms Biology, Morphology, and Physiology. The theory of evolution treated in an elementary manner. Fossils; their bearing on evolution.

The structure of the following animals treated in elementary manner with special reference to their physiology. Amoeba, Paramoecium. Hydra, Obelia, Tapeworm, Round-worm. Earth-worm, Fresh water mussel, Crab and Scorpion. Outline of their reproduction.

A more detailed study of the external character and of the general arrangement and relation of the chief internal organs as revealed by dissection in the Cockroach, Fish (Teleost), Frog, Bird and Rabbit. General outline of their life history. Life history of the butterfly and mosquito.

All the types above mentioned to be studied with special reference to their environment.

Candidates will be expected to be able to make simple diagrams to show the arrangement and general features of the chief organs and structures in the animals enumerated in the above syllabus.

Human Physiology.

The human skeleton and its parts. The action of muscles. The arrangement of the chief viscera in man. The leading facts of human physiology. The nature of food and the manner in which it is digested and absorbed. Glands. The liver, its structure and functions. The nature and functions of blood. The heart and the circulation. Respiration. Waste products and their removal. The temperature of the body and how it is maintained. The chief functions of the central nervous system, nerves and sensory organs.

In the Intermediate Examination there shall be two written papers of two hours and a half each, and each shall carry 50 marks. The first paper will include Zoology and second paper Human Physiology.

Part III—(6) Geography.

I. THE PHYSICAL BASIS OF GEOGRAPHY:—

(a) *The Atmosphere.*—The local and world distribution of temperature, humidity (including precipitation) and pressure; the circulation of the atmosphere—permanent, seasonal and local winds. The collection of climatic data, and the preparation of weather charts and climatic maps. Types of climate.

(b) *The Hydrosphere.*—The form, extent and distribution of the oceans; depth, configuration and composition of the ocean floors, continental shelf; composition of sea-water; distribution of salinity and temperature, movement of sea-water—waves, tides and currents; coral reefs and islands.

(c) *The Lithosphere.*—Land-forms; materials of the earth's crust and the forces that shape it; soils; changes in the earth's crust; elevation and subsidence; the agencies and processes of denudation rivers and the development of river-systems, under-ground water; snow and ice; lakes. Wind as an agent of transport and deposition, Volcanoes and earth-quakes; shore-lines; rising and sinking coasts; deltas and estuaries.

II. GENERAL REGIONAL GEOGRAPHY ON WORLD BASIS:—

Structure and relief—climate—vegetation—a study of the major natural regions with reference to prevailing economic conditions—distribution of population—chief world commodities, vegetable, animal and mineral—localisation of industry—transport—routes and trade centres.

III. DETAILED STUDY OF EURASIA AND INDIA:—

Eurasia:—Coast-line—structure and relief—climate—vegetation—communications and population of Eurasia as a whole. The study of the characteristic geographical features of the following natural regions:—tundra, forest-lands and steppe lands of Eurasia; the British Isles, the Central Plains of Europe; the Central Highlands of Europe;—the Mediterranean Region—the South-western Lands of Asia—Mid-Asian deserts—the Monsoon Regions.

Detailed study of India, Burma and Ceylon.

IV. PRACTICAL WORK:—

(a) Shape of the earth—determination of position—angular measurement and latitude—parallels and meridians—Greenwich time and Indian standard time—a study of the simple types of map projection.

(b) Study and interpretation of Indian Ordinance Survey maps—methods of showing relief.

(c) Principles of field mapping by plane-table, prismatic compass, clinometer, the use of a levelling staff, and aneroid barometer in determining height.

(d) Collection and tabulation of data—diagrammatic and catographic methods of expression.

Part III—(7) Logic.

Elementary principles of Logic as indicated in Creighton's Logic—Parts I and II.

Part III—(8) Indian History.

The 1st paper shall deal with Ancient and Mediaeval Indian History down to 1526 A. D. and the second paper shall deal with Indian History from 1526 A. D. to the present day. A knowledge of Geography shall be required from candidates.

Part III—(9) Ancient and Mediaeval History.

The scope of the subject is indicated by the text-book prescribed, namely, Grant's History of Europe.

Part III—(10) British History.

The History of Great Britain and Ireland, political and economic.

The first paper shall deal with History down to 1603 A. D. and the second paper shall deal with, History from 1603 A. D. to the present day.

A knowledge of Geography shall be required from the candidates.

ECONOMIC HISTORY OF ENGLAND.

1. *Economic life in England before the Norman Conquest :*

Roman Contribution : General stimulus and Roads.

Saxon Contribution : The Saxon Village, Markets.

Danish Contribution : Freemen, trade with continent and internal trade, towns, The influence of the church.

2. *Mediaeval conditions in village and in town :*

A. Rural life and agriculture. The manor ; a description. The landless freemen and labourers. Beginnings of commutation. General characteristics.

B. Urban life and trade. Why the volume of trade was small ; Absence of money ; economy and dangers of land and sea trade.

Origin and growth of town. "Freedom" of town. Rise of merchant guilds. Their functions. Fairs and markets and their regulation.

Mediaeval trade in Europe. Italian towns and the Hanseatic league. Why England was backward in trade and in industry then. The help of aliens in the development of English crafts and their encouragement by Kings.

3. *Disintegration of Mediaeval conditions :—*

A. Rural life. The Black Death and the disintegration of the Mediaeval village. Statutes of labourers and stock and land lease system. Movement towards enclosures.

B. Town life. Rise of craft guilds. Their functions and decay. The rise of the clothier and of small factories.

4. *National Problems and National Policies :—*

Favourable conditions :—The influence of the political conditions of England and of the Tudor Monarchy. Geographical discoveries and improvements in the art of Navigation and commercial organisation. Banking, Bills of Exchange and Precious Metals.

The Mercantile system and its uses.

Natural solution of social problems. Enclosures, coinage, pauperism and craft regulation. Elizabethan Legislation.

5. Large Scale Production :

Favourable conditions. Large scale demand due to consolidation of the nation and colonial expansion. Old colonial policy and its failure. Large Scale trade. Merchant Adventurers—Chartered companies—causes of their rise and growth. Joint stock system. Increase in Free Capital: Rise and growth of banking; notes, the Bank Charter Act cheques.

Inventions and discoveries. The Industrial Revolution. The Factory System and its characteristics.

The Agrarian Revolution:

6. Results of the Revolution.

A. Social evils of the Factory system.

Remedies: Factory Legislation; Free Trade Movements; Trade Unions; Collectivism Co-operation and Socialism.

B. Decay of English agriculture, Small Holding Acts. The new Poor Law, Old age Pensions, National Insurance.

7. Further Developments.

Combinations of Employers, Trusts.

Communications: Roads, Canals, Railways, Steamships, Tramways, Motor-cars, Aviation.

Imperialism and Commercial Revolution.

8. Summary.

England's present position in the world of commerce. Alleged defect and remedies.

Part III—(11) A Classical Language

different from the language, if any, taken under Part II.

* * * * *

Part III—(12) Economic Geography and Economic History.**SECTION—I. (ECONOMIC GEOGRAPHY)**

1. General Geography: Detailed study of India under the following heads:—

Structure and relief; climate and rainfall; irrigation, vegetation, population, occupations and industries, communications and trade centre, including ports, survey of the chief Provinces and States,

2. Climate, temperature, pressure of air, the wind system, rainfall and distribution, ocean currents, weather reports.
3. Climatic and vegetation regions of the world ; influence of climate and physical features on the economic activities and organisation of simple human societies and advanced peoples.
4. Forest resources of the world and of India. Forest industries.
5. Agriculture: The staple crops of the world and of India in particular. Conditions of consumption, production and trade of rice, wheat, millets, and oilseeds, sugar, tea, coffee, rubber, cotton, jute and silk.
6. Live stock ; particularly sheep and cattle—wool and dairy produce Other animal products.
7. Geographical aspects of manufacture. Localisation of industries—British and Indian examples. The supply of raw materials ; mineral resources of the world and of India. Power resources of the world and of India coal, oil and hydro—electricity.
8. Study of the following industries with special reference to India : Iron and Steel industry, textiles, paper, leather, glass, sugar, oils.
9. Transport and communications—land routes ; roads and railways. Waterways ; river and canal transport, ocean transport ; Steamship routes. Air Transport and air routes.
10. Development of trade centres and ports—relation to interland and to world markets.

SECTION—II. (ECONOMIC HISTORY)

Recent Economic History From the Industrial Revolution to 1914.

Economic History of Great Britain.—The state of industries on the eve of Industrial Revolution ; the meaning of the term 'Industrial Revolution ;' favouring conditions: features ; inventions ; economic and social effects of the Revolution. The industrial and economic policy during the 19th century ; the Agrarian Revolution ; the development of mechanical transport ; its effects on trade and agriculture ; the Corn Laws and their repeal ; administration of Poor Law ; Factory Legislation ; Co-operative movement ; the origin and history of trade unions ; finance and banking ; free trade and protectionist reaction ; individualistic movements and collectivism ; their economic achievements ; Constructive Imperialism.

Economic Development of India:—Growth of the empire; system of farming revenues; its evil effects; land revenue settlements; Zamindari Settlement in Bengal and in other tracts administered by the Company; Ryotwari Settlements in Madras and Bombay; Mahalwari Settlement in Northern India; Land Settlements in the Punjab and in the Central Provinces. Tenancy Legislation under the Crown in the various provinces. Permanent *versus* temporary settlement.

Decline of handicrafts; rise of Plantations and Factories; Indian duties; tariffs and their history from 1858; famines and remedial measures adopted; railways and irrigation; finance and economic drain; the Indian Debt; Local Cesses; industrial transition and transition in agriculture; labour and trade unions; factory legislation; imperial preference; protection to industries; Growth of towns; rural reconstruction; Co-operative movements.

Part III—(13) Economics and Banking.

(1) *Economics.*

Scope of Economics—Relation of Economics to other sciences.

Fundamental concepts—Wants—economic goods, utility, demand and supply.

Consumption—Necessaries, comforts and luxuries. Law of diminishing utility, consumer's surplus.

Agents of production—Land—Law of diminishing returns.

Labour—Law of population. Efficiency of labour.

Capital—Its growth and forms.

Organisation—Its place in Indian Economy, the entrepreneur.

Division of labour—Localisation of industries. Large and small scale production. Industrial combination. Trade Unions. Constant, diminishing and increasing returns.

Market—World market—influence of time on value—monopoly value. Rent: interest, wages and profits.

Money—Barter economy—value of money. Forms of money. Functions of banks. The London money market, the bill of exchange, gold points.

Foreign trade—the law of comparative costs, Gains from foreign trade—Free trade and protection.

Public Finance—Principles of taxation, direct and indirect taxes, incidence of taxation, public debts. Government and industry.

(2) *Banking*

General Principles.—Definition of Banking. The functions and Economic significance of banks. Growth of the cheque system and the Deposit banks. The sources of a banker's profit. Banking Investments. Regulation of Note issue. Reserves and Discount Rates. Crises and seasonal Trade Depressions.

The structure of the English Banking System.—The Bank of England and its relation to Government, the banking world and the General Public. The Bank Act of 1844. The clearing House. Recent developments.

History and Organisation of Banking in India.—The Imperial Bank of India; its constitutions and its relation to the Government and the other banks. Indian Joint Stock Banks, Exchange Banks, and Indigenous Banks, and the part played by them in the Indian Money Market. The clearing system. The Reserve Bank.

Currency.—Functions of good money. Various forms of money. Metallic currencies and coinage. Methods of economising Metallic currency and the service of Banks in this respect. The Gold standard, the Gold Exchange standard and the Gold Bullion standard. Token money, Legal Tender, Currency Deterioration—its causes, measures and remedies. Gresham's Law. Purchasing Power of money and variations therein. Paper Money. The proportion between the Note circulation and reserve in England and India. The Gold standard Reserve and the Paper Currency Reserve in India.

Outlines of Foreign Exchange.—General Principles. Indian Exchanges, Functions of Council Bills and Reserve Councils.

Part III—(14) **Accountancy and General Commercial Knowledge.**

SECTION—I. *Accountancy.*

(1) Book-keeping; its principles and practices by means of double entry. The uses of subsidiary books. Accounts of trading and non-trading concerns. Preparation of Final Accounts (viz., Trading and Profit and Loss accounts) and the compilation of Balance Sheet of sole traders, Partnerships and Joint Stock Companies.

(2) Depreciation. Reserves, Reserve Fund. Sinking Funds,

- (3) Capital and Revenue, Receipts and Payments and Income and Expenditure accounts.
- (4) Accounts Current and Average Due Date.
- (5) Treatment of Accounts in respect of Bills of Exchange, Consignments and Joint Adventures.
- (6) Single Entry. Book-keeping, its defects and conversion to Double Entry.
- (7) Partnership Accounts including questions of goodwill and dissolution.
- (8) Joint stock company accounts. Share capital and Share records. Issue of shares, Allotments. Calls. Statutory Books and Returns. Debentures. Premium and Discount on Shares and Debentures. Purchase of business, Conversion of Partnership into a Limited Company—Goodwill. Reduction of Capital. Elements of Reconstitution, amalgamation and absorption.

SECTION—II. *General Commercial Knowledge*

- (1) Elements of Commercial Arithmetic involving easy methods of calculation.
- (2) *Industry and Trade*.—Divisions of Industry into Extracting, Manufacturing, etc. Home Trade—wholesale and retail, Departmental and Multiple shop, Mail order business and co-operative stores. Foreign Trade—Importing and Exporting, Customs and Excise, Insurance, Documents used and methods of payment for goods. Advertising.
- (3) Outlines of Money, Exchange and Banking. (Fundamental notions only.)
- (4) *Carriage and Affreightment*.—Common carriers, Railway Companies and Shipping Companies. Warehousing.
- (5) *Organized Markets*.—Business intermediaries. Produce Markets. Spot Transactions and Futures. Hedging operations, Stock Exchange, its organization and influence,

Part III—(15) Agriculture.

Theoretical : (2 hours a week for 2 years, each year consisting of 32 working weeks—total 128 hours).

Weather : Climate, seasons, monsoons and rainfall, as affecting the growth of crop.

Soils: Origin, Formation, Soils of the Madras Presidency. The proximate constituents, sand, clay, lime and humus. Fertility of soil as modified by its physical, chemical and biological properties. Water capacity and movement of water in soils. Drainage. Dormant and available plant food. Retentive power of soils for manurial constituents.

Land Measurement: Measurement of land. Laying out of fields. Calculation of areas.

Tillage and Tillage Implements: Necessity for and effects of tillage. Tillage operations in wet and dry lands. Ploughs and ploughing. Wooden and iron ploughs. The parts of a plough and general adjustments. Harrows, Gun-takas, Cultivators, Rollers. Tools employed in tillage operations.

Seeds and Sowing: Preparation of land for sowing. Deep and shallow sowing. Broadcasting and drilling. Implements used. preparation of seed for sowing. Quantity and quality of seed. Selection of seed and seed strains. Germination of seed. Seed beds. Nurseries. Transplanting.

Plant Life: Plant nutrition as illustrated by the growth of farm crops. Functions of roots, stems, leaves, flowers and seeds. Reproduction from seed and by vegetative growth. Weeds and their distribution in land. Eradication of weeds. Interculturing. Implements and tools used.

Irrigation: Necessity for water. Sources of water-supply. Laying out irrigation channels in the field. Methods of lifting water and duty of water generally.

Manures and Manuring: Necessity for Manures. General principles governing the application of manures. Classification of manures. Farm manures, their collection and preservation. Synthetic Farm Yard Manure. Green manuring, oil-cakes, bone-meal, fish-manure. Ammonium Sulphate, Sodium Nitrate, Ammophos and superphosphate. Unit values of manures.

Harvesting: Harvesting, threshing, cleaning and measuring or weighing of produce. Storage of produce.

Crops and Cropping: Crops and Cropping. Rotations and mixed cropping. Fodder and Green manure crops. The Chief Cereal pulse and industrial crops of the Circars. *Paddy, Ragi, Cumbu, Cholam, Groundnut, Green and Black Gram, Gingelly, Tobacco, and Sugar cane.

*Deccan: cholam, korra, cumbu, ragi, paddy, cotton, groundnut, bengal gram, red gram.

Carnatic: paddy, cumbu, cholam, ragi, tenai, groundnut, green gram, red gram and gingelly.

Central: paddy, cholam, ragi, groundnut, red gram, sugar cane and gingelly.

South: Paddy, ragi, groundnut, red gram, cotton, sugar cane, tobacco, and gingelly.

West Coast: Paddy, cocoanuts, pepper, plantains, arecanuts, ragi, gingelly and groundnut.

actical working, knowledge of the local crops is required, deduced, possible, from the students having taken part in all field operations including the preparation of the land, sowing and planting, manurigation, weeding, harvesting, threshing and preparation for the

age caused by the following crop pests—Control measures:—

t Pests: Paddy caterpillar (*Spodoptera mauritia*); Rice hispa (*enescens*); Paddy stem-borer (*Schoenobius incertellus*), Grass Hieroglyphus (*banian* and *oryziverous*); the Pink Boll worm (*agossypiella*); the Spotted Boll worm (*earias insulana* E—*Fabia*); ppper (*Idiocerus*); Rhinoceros beetle (*Oryctes*); Mealy-wing bugs (*s*).

oid Pests: Paddy 'Blast' (*Piricular oryzae*, Paddy (Helmin thos-yp.) Ground-nut 'Wilt' (*rhizoctonia bataticola*). Cholera 'Smut' (*ie 'Red rot' (Collectotrichum falcatum).*

t Animals and Feeding: Care and management of cattle. Breeds . Breeding. Points of good animal. Common ailments and First-ament. Cattle foods, roughages and concentrates. Rations for animal, working cattle and milching cow-. Milk and its general s.

tical: (1½ hours in morning twice a week for 2 years, each year g of 32 working weeks—total 64 classes):

a student should take part in all operations going on in the farm ly seeing work done by coolies—maintain a field-book of observations and testified by the class teacher and the Principal as student's own Field-books should be produced at the time of the Practical Examination—ot less than 75 per cent of practical classes should have been attended tudent.

ination: The examination will be both written and practical. c to be of 2½ hours' duration and to carry 50 marks.

practical to be of 8 hours' duration, to consist of ploughing and ld operations as well as an oral examination and to carry 50

Notes of Instructions.

he subject should be treated from a practical point of view. sciences will be taught to a minimum extent: just enough to the general principles of agricultural practice.

ime recommended for study is 5 hours a week of which 3 hours y devoted to practical work. The practical work should be done

in two periods of $1\frac{1}{2}$ hours each. The time-table should be arranged for practical work in the mornings.

3. Local crops should be grown on the farm in preference to others supplemented when possible by those specified in the syllabus which are not cultivated in the immediate vicinity.

4. Sufficient area of land should be attached to a College for ploughing and other field operations by students, and this farm should be well-equipped with the necessary implements, tools and other accessories and cattle.

5. Students should be taken on short excursions to typical tracts with a view to enable them to have a wider outlook than they learn in a small farm.

Part III—(16) Electrical Engineering.

Section 1.—Mechanical Engineering.

1. *Geometry* (Under *Mathematics, Experimental Geometry*). Add tangents, inscribe and describe figures. Areas of plane figures, plane curves such as parabola, ellipse and hyperbola, methods of drawing and chief properties, cycloidal, spiral and other common curves and loci.

2. *Solid Geometry*.—Lines, points and planes. Projection of simple solids, Regular solids. Sections of solids. Isometric projection.

3. *Graphics*.—Problems relating to the reduction of a system of forces in two dimensions. Arithmetic. Plotting of the curves from given data.

4. *Machine Drawing*.—Ability to copy accurately to scale and supply additional views. The preparation of drawings of simple machines from dimensioned sketches, models or actual parts of machines.

5. *Strength of Materials*.—Mechanical properties of Engineering materials. Stress and strain. Modulus of elasticity. Elastic limit. Ultimate strength. Factor of safety and working strength. Statics and application to structures. Co-planar forces. Application by graphical methods to simple frames within joint such as cranes, etc. Elementary study of beams. Bending moment and shearing force. Sections in iron, steel and wood. Struts and columns. Formula of Gordon and Euler. Simple shear and torsion. Strength of shafts. Principle of work. Potential and Kinetic energy. Centrifugal force.

6. *Materials*.—Characteristics of cast iron, wrought iron and steel. Ordinary forms of wrought iron and steel. Working strength of these

materials in compression, tension and shear. Characteristics of copper, brass, gun metal and aluminium.

7. *Shafting and Bearings*.—Forms of shaft and shaft couplings, friction and dog clutches, universal joints, arrangements of simple pedestals and footstep bearings. Materials for belts. Forms of ordinary spur and bevel wheels and their velocity ratios.

Section II.—Electrical Engineering.

8. *General Principles*.—Electric-magnetic C. G. S. system of units; Principles of Electro-magnetic induction; practical system of electric units; Electro magnets; Magnetic force and magnetic induction; Hysteresis loop; Eddy currents; Production of alternating currents. Commutation. Alternating E. M. F. and current R. M. S. values; Frequency; Power; Factor; Polyphase currents; Capacity, Inductance and Impedance. Star and mesh connections.

9. *Measurements*.—Ammeter, Voltmeter, Megger, Watt-meter, Watt-hour meter, Power factor meter, Frequency meter.

10. *Generators*.—Continuous current generator (Shunt series, Compound), Alternators: their characteristics and methods of testing their efficiency and voltage regulation. Transformers and their uses.

11. *Motors*.—Continuous current motors, shunt series and compound, their characteristics and uses. Alternating current motors, induction motors, synchronous motors; methods of starting and their application.

12. *Batteries*.—Construction and management of secondary batteries, their practical applications.

13. *Transmission*.—Methods of transmitting electrical energy, calculation of conductor, size and transmission losses.

14. *Distribution*.—Methods of distributing electric power in streets, overhead and underground mains.

15. *Illumination*.—Candle power, Photometers, use of shades.

Part III—(17) Mechanical Engineering

Geometry (Under Mathematics—Experimental Geometry).—Add tangents, inscribe and describe figures, areas, figures, plane curves such as parabola, ellipse and hyperbola methods of drawing and chief properties; cycloidal spiral and other common curves and loci.

Solid Geometry.—Lines, points and planes. Projection of simple solids. Regular solids. Sections of solids. Isometric projection.

Graphics.—Problems relating to the reduction of a system of forces in two dimensions. Arithmetic. Plotting of the curves from given data.

Machine Drawing.—Ability to copy accurately to scale and supply additional views. The preparation of drawings of simple machines from dimensioned sketches, models or actual parts of machines.

Strength of materials.—Mechanical properties of Engineering materials. Stress and strain. Modulus of elasticity. Elastic limits. Ultimate strength. Factor of safety and working strength. Statics and application to structures. Co-planar forces. Application by graphical methods to simple frames with pin joint such as curves, etc. Elementary study of beam. Bending moment and shearing force. Sections in iron, steel and wood. Struts and columns. Formula of Gordon and Euler. Simple shear and torsion. Strength of shafts. Principle of work. Potential and Kinetic energy. Centrifugal force.

Heat Engines.—Properties of steam, sensible and latent heats. Dry saturated and superheated steam. Boiling point of liquids. Relation between temperature and pressure of steam. Laws of perfect gases. Curves of volumes and pressures. Theoretical diagram of work and estimates of mean pressure. Work done in the conversion of water into steam. Work done in cylinder. Efficiency.

Steam Engines.—History and early types. Modern type of land, marine and locomotive engines. High speed engines. Uniflow engines and steam turbines, description and working, essential differences and scope of usefulness. General design as affected by conditions of working.

Internal Combustion Engines.—Early history and development. Later types. Modern, high duty, high efficiency engines. Carnot's cycle. Otto engine cycle. Modern engine cycles and their applications. Types of engines as affected by requirements of power and the nature of available fuel as petrol, kerosene oil, crude oil and gas (suction and pressure).

General construction of the above types of engines.—Characteristic properties of coal, lignite, peat, crude oil, light oils, petrol, benzole and tar oils, alcohol and vegetable refuse (Bogassee and Paddy husk), Producer gas Suction gas plants.

Boilers.—Description and working of Cornish, vertical Lancashire Locomotive. Water tube and Marine Boilers. Feed heaters, economisers, superheaters and other accessories and mountings.

Machine construction and design.—The production of sketches, working drawings, tracings and finished drawing of more complex parts of machines, the dimensions being taken from actual machines or models. The details will be chosen from the following:—Engines, gearing, valves, hand and machine tools, workshop fittings and appliances, boilers and rivetted joints, screws, belts and nuts, flanges, cottered joints, plumber blocks and brasses and stuffing boxes.

Materials.—Characteristics of cast iron, wrought iron and steel. Ordinary forms of wrought iron and steel. Working strength of these materials in compression, tension and shear. Characteristics of copper, brass, gun metal and aluminium.

Connections.—Forms and properties of rivets and arrangements of rivets in lap and butt joints, single and double rivetted. Pitch of rivets. Treatment of three or four overlapping plates. Junctions of plates by angle and T-irons. Forms and proportions of bolts and nuts. Flange joints: different forms of screw threads; lock nuts; key and cotter fastenings.

Shafting and bearings.—Forms of shafts and shaft couplings, friction and dog clutches, universal joints, arrangement of simple pedestals and footstep bearings; methods of lubricating bearings.

Belt and toothed gearing.—Forms of belt pulleys. Velocity ratio of a pair of pulleys. Stepped speed cones. Tension of belts, joint of belting. Materials for belts. Forms of ordinary spur and bevel wheels and their velocity ratios.

Engine details.—Usual forms of cranks and levers. Methods of fixing crank pins. Forms of eccentrics. Ordinary arrangements of connecting rods, cross heads and coupling rods. Forms of cylinders, flangers and covers, simple forms of pistons and methods of packing, attachment of piston rods. Simple forms of stuffing box and gland. Construction of simple slide valve.

Mechanical Engineering and Electrical Engineering. The instruction in these subjects should include considerable practical work in workshop and laboratories supplemented by visits to various Engineering works. The range covered by each of these subjects is necessarily very wide and the knowledge expected in many portions of the syllabus can only be general and descriptive. It may be necessary to allot extra hours for practical work as for example—Saturday mornings. For satisfactory instruction, equipment by way of workshop and laboratories are required.

Part III—(18) Surveying.

Chain.—Prismatic Compass and Plane Table :—Running a chain line; measuring offsets; use of the cross staff; optical square, survey of areas with chain only; well conditioned triangles, check or tie lines; testing the chain; modes of passing obstacles; chaining across a river or other obstacle survey of areas with prismatic compass; keeping the field book; plotting surveys made with chain and compass; survey of areas with plane tables; inaccessible points; filling in a survey; finding one's place in a survey.

Setting out.—Ranging straight lines by eye. Laying out curves by chords and offsets.

Level:—Permanent and temporary adjustments; levelling field book; two methods of reducing the field book; levelling; contouring; cross sections; correction for curvature of the earth and refraction; check levels; bench marks; use of Abneys level; clinometer and Ghaut tracer; setting out gradien; for railways, canals and sewers.

Theodolite:—Use and adjustments of theodolite; traversing; Gale's system setting out straight line and curves.

Drawing and mensuration:—Use of Drawing instruments, construction of scales; conventional signs; estimation of acres; use of planimeter and pentagraph; plotting lines of levels and taking out quantities of earth-work; copying plans to different scales by squares; representation of ground by contours section on contoured plans; location of roads and railways on contoured plans showing cuttings and embankments; estimation of areas and volumes; reduction and plotting of a theodolite traverse.

Part III—(19) Drawing.

Syllabus not yet framed.

Part III—* (20) Music.

There shall be two papers of three hours' duration each on the following course and there shall be a practical test on Sections 2 and 5. In the latter, the candidates will be expected to sing or to play on one of the following instruments; Veena, Violin and Flute.

1. *Theory of Music.*

(a) Musical sounds and intervals, including laws of vibration of strings and air columns. Harmonies and upper partial tones. Pitch, intensity-Timber and Voice-Registers (Sthayi). Srutis, Swaras 7, 12 and 16; their names in Carnatic and Hindustani Music. Consonant and Dissonant Notes—Vadi, Samvadi and Anuvadi.

(b) Raga and Tala. Meanings of the term Raga. Raga classifications in Carnatic and Hindustani Music. Meaning of the term Tala. The Tala system of Carnatic Music; the Dasa Pranas and the Pancha Talas. Simple Talas in Hindustani Music.

2. *Musical Composition.*

Knowledge of the different types of musical composition, both voice production exercises and classical pieces, including Gitas, Varnas, Ragamalikas, Kirthanas and Padas. Principles of Carnatic Notation and of Western Staff Notation.

* This syllabus is under revision.

3. *History of Music.*

A knowledge of the history of Music, from Bharata to the present day, with special reference to the following scholars, musicians and composers :

- | | |
|--------------------------|------------------------------|
| (1) Bharata | (12) Tyagaraja |
| (2) Sarangadeva | (13) Syama Sastri |
| (3) Ahobila | (14) Patnam Subramania Aiyar |
| (4) Rama Amatya | (15) Subramanya Kavi |
| (5) Venkatamakhi | (16) Mysore Sadasiva Rao |
| (6) Somanatha | (17) Arunachala Kavirayar |
| (7) Tulajaji | (18) Gopalakrishna Bharati |
| (8) Jayadeva | (19) Ananta Bharati |
| (9) Tirtha Narayanaswami | (20) Vedanayakam Pillai |
| (10) Purandara Vittala | (21) Kavi Kanjara Bharati |
| (11) Dikshita family | (22) Kulasekhara Maharaja |
| | and (28) Kshetrappa. |

4. *Musical Instruments.*—

A knowledge of the structure and use of the chief instruments of South India.

5. *Ragas**

A knowledge and fair practice of the following 20 ragas, with the ability to render at least one classical composition in each:— Dhanyasi, Saveri, Bhupalam, Bhairavi, Mukhari, Vasanta, Madhyamavati, Sriraga, Mohana, Kamboji, Surati, Sahana, Anandabhairavi, Suddha Saveri, Bilhari, Arabhi, Begada, Kalyani, Todi, Sankarabharana.

Candidates will be expected to give accurate definitions of the above ragas with illustrations, which in the oral examination, will be sung or played and, in the written examination will be set down in musical notation.

*The choice of Ragas may be changed after some years.

CHAPTER XXXIX.

B. A. (PASS) DEGREE EXAMINATION*(Regulations).*

Conditions of
Admission.

1. Candidates for the Degree of Bachelor of Arts (B. A.) shall be required—

(i) to have passed the Intermediate Examination in Arts and Science of this University or the Intermediate Examination of any other Statutory Indian University accepted by the Syndicate as equivalent thereto;†

(ii) to have undergone subsequently a further course of study in an affiliated college as prescribed hereunder, extending over a period of two years, each consisting of three terms consecutive; and

(iii) to have passed the Examination for the Degree herein-after prescribed,

Courses of
Study

2. The course for the B. A. Degree shall comprise the following subjects of study :

Part I—English Language and Literature.

Part II—A second language. One of the following languages at the option of the candidate :

(a) Classical—Sanskrit, Latin, Arabic, Persian, Pali.

† *Note.*—The following examinations have been recognised by the Academic Council, in accordance with Section 83 (1) of the Act as equivalent to the Intermediate Examination of the Andhra University:—

- (1) Intermediate Examination of all other Statutory Indian Universities.
- (2) Intermediate Examination of Board of High School and Intermediate Education, Rajaputana, Central India and Gwalior, Ajmere.
- (3) Intermediate Examination in Commerce of Board of High School and Inter. Education, Rajaputana, Central India and Gwalior, Ajmere. (Subject to the conditions imposed on candidates taking commercial subjects in Inter. Exams. of the Andhra University).
- (4) Intermediate Examination conducted by the Board of High School and Intermediate Education (United Provinces)—Allahabad.

(b) Modern European—French, German.

(c) Modern Indian—Telugu, Kannada, Tamil, Oriya, Hindi, Urdu.

Part III—One of the following groups :—

(i) Mathematics.

(ii-A) Physics Main with Chemistry or Mathematics as subsidiary.

(ii-B) Chemistry Main with Physics as subsidiary.

(iii-A) Philosophy.

(iii-B) Philosophy.

(iv) History and Economics (History main).

(v) History and Economics (Economics main).

(vi) One of the languages included in Parts I and II above,

3. No candidate shall be eligible for the Degree of Bachelor of Arts until he has passed an examination in English language and Literature, and in a second language, and in one of the optional groups prescribed.

Eligibility for the Degrees.

4. A candidate for the B. A. Degree Examination may at his option present himself for the whole or for a Part at any one time.

Option to appear at whole examination or parts.

5. Candidates shall be examined in—

Part I—*English Language and Literature.*

There shall be four papers in English, three of three hours, duration and the fourth of two hours and a half duration.

Subjects for composition and duration of papers.

The course shall be (a) Composition on matter supplied by books set for perusal, (b) the study in detail of certain prescribed books and of the History of English Literature so far as it is represented by these books.

The books set under (a) shall consist of two books and may include works of fiction, literary criticism, biography, history, science, philosophy or sociology.

Books set under (b) shall be arranged in the following classes :—

- (1) Two plays of Shakespeare.
- (2) Modern Poetry : about 2,000 lines.
- (3) Modern Prose : Four set books.

The paper on the books under (a) which shall be of three hours' duration shall consist exclusively of subjects for short essays, and of these the paper shall contain a larger number than the candidate is required to attempt.

Under (b) the papers on Shakespeare and Prose shall each be of three hours' duration, and the paper on Modern Poetry of two hours and a half duration. No question shall be set on the General History of the Drama or on General English Literature in the papers on Shakespeare, Modern Poetry and Prose.

Part II—*A second language.*

There shall be two papers of three hours' duration each.

- (i) Classical—Sanskrit, Latin, Arabic, Persian and Pali.

The course shall comprise (a) a detailed study of prescribed text-books on prose, poetry and drama and applied grammar and poetics ; and (b) translation of seen and unseen passages from and into English.

The first paper shall be upon (a) and the second upon (b).

- (ii) Modern Indian—Telugu, Kannada, Tamil, Oriya, Hindi and Urdu.

The main object of the course shall be the training of the student to employ the language as a vehicle of expression of modern thought.

The course shall comprise (a) a detailed study of prescribed text-books on prose, poetry and drama and applied grammar and poetics ; and (b) original composition, composition on text-books in prose set for non-detailed study and translation from English only.

The first paper shall be upon (a) and the second upon (b).

Part III—*One of the groups* mentioned under Part III in section 2 above at the option of the candidate.

Group (1) Mathematics

There shall be six papers set in this group—four of which viz., on (1) Algebra and Trigonometry, (2) Astronomy, (3) Pure and Analytical Geometry, (4) Calculus, shall be each of three hours' duration, and two of which viz., (1) Dynamics and (2) Hydrostatics and Properties of Matter shall be each of two hours' duration.

There shall be no practical examination in Hydrostatics and Properties of Matter for Group (i) candidates.

Group (ii-A)—Physics (Main)

The course shall comprise the study of—

(1) Dynamics and Hydrostatics, (2) Properties of Matter and Heat, (3) Light and Sound and (4) Electricity and Magnetism. There shall be four papers in theory, each of two hours' duration on, each of the above four subjects.

There shall also be a practical examination of three hours duration.

Chemistry (Subsidiary).

There shall be one paper in theory and one paper in practical each of three hour's duration. The course and examination shall be the same as that for B.Sc. Chemistry subsidiary.

Mathematics (Subsidiary).

There shall be two papers, each of three hours' duration, one on Algebra, Trigonometry and Analytical Geometry and the other on Calculus and Differential Equations. The syllabus and examination shall be the same as that for B.Sc. Mathematics subsidiary.

Group (ii-B)—Chemistry (Main).

The course shall comprise the study of—

(1) Inorganic Chemistry, (2) Physical Chemistry and (3) Organic Chemistry. There shall be three papers in theory, each of three hours' duration, one on each of the three subjects.

There shall also be a practical examination of six hours' duration.

Physics (Subsidiary).

There shall be one paper in theory and one paper in practical, each of three hours' duration. The course and examination shall be the same as that for the B.Sc. Physics Subsidiary.

Group (iii-A)—Philosophy.

(1) Psychology, (2) Ethics, (3) Logic and Theory of Knowledge, (4) A philosophical work bearing upon a school or period of Indian Philosophy, and (5) A philosophical work bearing upon a school or period of European Philosophy.

Text-books or syllabuses will be recommended from time to time as indicating the scope and standard of the examination in subjects (1), (2) and (3) above.

There shall be one paper of three hours each in Logic and Ethics, two papers of two hours each in Psychology and one paper of two and a half hours each, in European Philosophy and Indian Philosophy.

Group (iii-B)—Philosophy.

(1) Psychology, (2) Ethics (3) Any one of the following subjects at the option of the candidate :—

(a) Indian Philosophy, (b) European Philosophy, (c) Experimental Psychology and (d) Educational Psychology.

(4) & (5) Any two of the following subjects :—

(a) Economics, (b) Politics, (c) Sociology.

Syllabuses and text-books shall be the same as those prescribed in the corresponding subjects under Groups (iii-A), (iv) and (v). The scope and standard of examination in Experimental and Educational Psychology shall be indicated by the text-books recommended from year to year.

There shall be two papers, each of two hours' duration on (1) General Psychology, one paper of three hours' duration on (2) Ethics, one paper of two hours and a half duration on the optional subject under (3) above, one paper of three hours' duration on (4) Economics and a two hours and a half paper on (5) Political Science or Sociology.

Group (iv)—History and Economics, (History Main).

(1) One of the following special periods of Indian History :—

- (a) Early India to the death of Harsha.
- (b) Mediaeval India from the death of Harsha to 1556.
- (c) Moghul and Maharatta India from 1556 to 1761.
- (d) India under the East India Company to 1858.
- (e) Modern India from 1858 to the present day.

Note.—The students shall have an acquaintance with the Constitutional History of the prescribed special period, but shall not be required to make a detailed study of the subject.

(2) Constitutional History of India during the British period.

- (3) Modern History according to a syllabus.
- (4) Economics—General.
- (5) Politics.

There shall be set one paper of three hours' duration on each of the subjects mentioned above.

Group (v)—History and Economics (Economics Main).

- (1) Economics—General.
- (2) Economics—Special I.
- (3) Economics—Special II.
- (4) Modern History according to a syllabus.
- (5) Sociology or Politics.

There shall be set one paper [of three hours' duration on each of the subjects mentioned above.

Group (vi)—One of the Languages included in Parts I and II above.

One of the following languages, which shall be taken in conjunction with the related subject or related language, if any, specified for each language in the following lists:—

<i>Selected Language.</i>	<i>Related Subject.</i>
Sanskrit.	Early Indian History.
Pali.	Early History of India.
Persian or Arabic.	Early Muslim History.
Urdu.	Indian History—Prescribed Period.
Telugu, Tamil, or Kannada.	Early South Indian History.
Oriya.	Early History of Orissa.
Hindi.	Mediaeval History of Northern India.
<i>Selected Language (Main).</i>	<i>Related Language (Subsidiary)</i>
Sanskrit, Arabic, Persian.	None.
Telugu, Tamil, or Kannada.	Sanskrit.
Oriya.	Sanskrit.
Hindi or Pali.	Sanskrit.
Urdu.	Arabic or Persian.
English.	None.

The courses of study in the several languages shall be as follows:—

(1) Sanskrit.

(A) Sanskrit (Main).

Sanskrit Language and Literature. The Course shall be:—

(a) Selections from the early period, including Vedic Mantras, Brahmanas, Aranyakas, Upanishads and the Sutra Literature.

(b) Selections in prose and verse from the Later Period including the Dharmasastras and the Ithihasas, Kavya and Nataka literature.

A knowledge of Alamkarasastra will be required sufficient for the correct understanding of learned and recognised commentators.

(c) Sanskrit Grammar treated historically and comparatively in accordance with a syllabus,

(d) Translation from and into Sanskrit.

(e) General History of Sanskrit Literature.

(f) Early Indian History.

In the examination there shall be two papers, each of three hours' duration in subject (b) and one paper of three hours' duration in each of the other subjects except Translation which will form part of the papers set on (a) and (b) above.

(B) *Sanskrit (Subsidiary).*

The course shall consist of the study of one drama of the classical period and portion of one Kavya. In the examination there shall be one paper of three hours' duration which shall include pieces for translation from Sanskrit into the main language.

(2) **Pali.**

The course shall consist of—

(1) The study of certain prescribed text-books in poetry and prose.

(2) Pali grammar treated comparatively in relation to Sanskrit and the middle and modern Indian languages.

(3) History of the literature of the language.

(4) Translation from English into the selected language and *vice versa*.

(5) Early History of India or Sanskrit.

There shall be two papers on the prescribed text-books under 1 and one paper in each of the other subjects, all of three hours' duration.

(3) (a) Arabic or Persian (Main.)

The course shall consist of—

- (a) Prose books selected from different periods.
- (b) Poetry books selected from different periods.
- (c) Translation from prose books other than set books ; translation from the set poetry books and from English into Arabic or Persian Prose.
- (d) Grammar including Rhetoric and Prosody.
- (e) History of Language and Literature with special reference to the set books.
- (f) A selected period of early Muslim History.

The periods of History for Persian or Arabic may be one or other of the following :—

- (1) The four first Khalifas and Umayyad Khalifate excluding Africa and Spain.
- (2) The Abbasid Khalifate, excluding Africa and Spain and the Wars of Crusades.
- (3) The Muslim Conquest of Egypt and Northern Africa until the fall of the Abbasid Khalifate and excluding the wars of the Crusades
- (4) The Arab conquest of and rule in Spain.
- (5) The Wars of the Crusades.

There shall be one paper of three hours' duration in each of the subjects mentioned above.

(b) Arabic or Persian (Subsidiary).

The course shall consist of the study of selected pieces from one poet of the classical period and selected portions from the works of

one standard prose writer. There shall be one paper in the examination of three hours' duration which shall include pieces for translation from Arabic or Persian into the main language.

(4) Urdu.

The course shall consist of—

(a) Prose books from different periods including at least one modern work.

(b) Poetry books from different periods, including at least one modern work.

(c) Translation from prose and poetry books other than the set books : translation from English into Urdu to be made in an approved modern style.

(d) Grammar including Rhetoric and Prosody.

(e) History of Language and History of Literature.

(f) Indian History—(1) Any one of the following periods to be prescribed from year to year :—

(i) 1347-1707—Deccan Kingdoms

(ii) 1708-1857—From Aurangazeb to the Indian Mutiny.

(iii) 1858-1920

or (2) Arabic

or (3) Persian.

There shall be one paper of three hours' duration in each of the subjects mentioned above.

(5) Telugu, Tamil or Kannada.

The course shall consist of—

(a) The study of selections representative of the several periods of the literature of the selected language including one or more inscriptions.

In the case of Telugu the extent of the prescribed books shall be as follows :—

- (1) Poetry : About 1000 stanzas—400 from the Puranic Period, 400 from the Prabandhas and 200 from Modern poetry.
- (2) Prose : General Prose works including works bearing on literary criticism and the history of language and literature.
- (3) Drama : Two dramas one of which should be a translation from Sanskrit.
- (4) Ancient Inscriptions.
- (b) The history of the literature with special reference to the set books.
- (c) Grammar, prosody and poetics according to prescribed syllabus and the history of the language as illustrated by set books.
- (d) The elements of the Comparative Grammar of the Dravidian Languages.
- (e) Composition.
- (f) Early South Indian History or Sanskrit.

The examination will comprise one paper of three hours' duration in each of the above subjects.

The following will come into effect as from the examination of 1940 :—

In Chapter XXXIX (B. A. Pass degree examination) of the University Code, page 268—

- (i) Read “ (b) Outlines of the History of Language and Literature according to prescribed syllabus ” for “ (b) The History of Literature with special reference to the set books ” occurring in lines 12 and 13 above and ;
- (ii) insert a full-stop after “ syllabus ” in line 15 and delete the remaining words in the line ;
- (iii) Substitute the following for lines 20 and 21 :—

There shall be six papers, the first paper shall be on the set books (Poetry and Drama) and Prosody and Poetics, the second on the set books (Prose and Inscriptions) and grammar, the third on the outlines of History of Language and Literature and the remaining three papers, one on each of the subjects (d), (e) and (f) supra.

(6) Oriya.

The course shall be the same as for the Dravidian languages with the substitution of Gaudian Grammar for Dravidian Grammar, and of the Early History of Orissa for Early South Indian History.

(7) Hindi.

The course shall consist of—

(1) The study of certain prescribed text-books in poetry and prose.

(2) Elements of the comparative grammar of the Gaudian languages.

(3) History of literature with special reference to the set books.

(4) Composition.

(5) Mediaeval History of Northern India or Sanskrit.

There shall be two papers on the prescribed text-books under (1) and one paper in each of the other subjects, all of three hours' duration.

(8) English.

There shall be six papers each of three hours' duration:—

(1) Drama: Two English plays and one classical or Indian translated into English.

(2) English Poetry: 16th Century onwards. Set-books, C.2,000 lines.

(3) English Prose: 16th Century onwards. Set-books: four books.

(4) History of English Literature from Chaucer, and analysis of literary forms.

(5) History of the English Language, and *either* (a) Select passages from Sweet's Primer of Anglo-Saxon or (b) A set book from Chaucer.

Note:—More than a third of the paper shall be on the History of the Language.

(6) General Essay.

Notes:—(i) The questions on subjects 1—4 will be on the contents and criticism of only the books prescribed.

(ii) Set Books shall be current for three years approximately one-third to be fresh each year.

6. A candidate shall be declared to have passed the examination Marks qualifying for a pass in English if he obtains not less than thirty-five per cent of the total number of marks. A candidate shall be declared to have passed the examination in a second language if he obtains not less than 35 per cent of the total number of marks. A candidate shall be declared to have passed in an optional subject if he obtains not less than thirty-five per cent of the total marks and not less than 30 per cent in each division of the examination as prescribed hereunder.

Provided that a candidate offering Economics and Political Science or Sociology under Group (iii-B), shall obtain a special minimum of 30 per cent of the total marks of the two papers on the two subjects taken together. The division shall be as follows:—

Divisions.

- | | | | |
|-------|--------------|---|--|
| Group | (i) | (a) Pure Mathematics, | (b) Applied mathematics. |
| Group | (ii-A) } | (a) Written examination of the Main subject, | |
| | and (ii-B) } | (b) Practical examination of the Main subject, and (c) Subsidiary subject (written and practical taken together). | |
| Group | (iii-A) | All subjects to be treated as one division. | |
| Group | (iii-B) | All subjects to be treated as one division subject to the proviso under the para 1 above. | |
| Group | (iv) | (a) Indian, Constitutional and Modern Histories, | (b) Economics and Politics. |
| Group | (v) | (a) Economics, | (b) History and Sociology or Politics. |
| Group | (vi)—(i) | Languages other than English. | |
| | | (a) Selected Language ; | |
| | | (b) Related Subject or Language. | |
| Group | (vi)—(ii) | English. | |

(a) Drama, Poetry and Prose, (b) History of English Literature and Analysis of Literary Forms, History of English Language and Essay.

All other candidates shall be deemed to have failed in the examination.

There shall be separate pass and failure lists for the English language part, for the second language part, and for each of the optional groups. Successful candidates obtaining not less than sixty per cent of the total marks in English or in a second language or in the optional group shall be placed in the first class and ranked in the order of proficiency as determined by the total marks obtained by each in the part concerned. Successful candidates obtaining less than sixty per cent and not less than fifty per cent shall be placed in the second class and ranked in the order of proficiency as determined by the total marks obtained by each. Successful candidates obtaining less than fifty per cent shall be placed in the third class.

Classification
of successful
candidates.

Transitory Regulations.

I. For the benefit of candidates who have failed in the B.A. Degree examination of 1931 or earlier, the B.A. Degree examination under the Old Regulations (i.e., in force up to and inclusive of the examination of 1931) will be held in the months of April and September 1932 under Old time-tables. Candidates for the B.A. Degree examination who completed their courses of study and earned the prescribed certificates of attendance and progress for two years under the Old Regulations shall be permitted to appear for the B.A. Degree examination of 1932 under the same Regulations. Candidates who have been exempted from the production of attendance certificates may, at their option, appear for the examination of 1932 under the Old Regulations. The text-books and syllabuses will be the same as those prescribed for the examination of 1931.

II. No examination for the B.A. Degree under the Old Regulations (i.e., in force up to and inclusive of the B.A. Degree examination of 1932) shall be held as from the B.A. Degree examination of 1933.

Candidates for the B.A. Degree examination who completed their courses of study for that examination under the Old Regulations shall be permitted to complete the B.A. Degree examination under the New Regulations subject to the following conditions:—

- (1) A candidate who has passed Part I of the examination under the Old Regulations shall be deemed to have passed in Parts I and II under the New Regulations.
- (2) A candidate who has passed Part II under the Old Regulations shall be deemed to have passed in Part III of the examination under the New Regulations.
- (3) A candidate who has failed to pass in Part I of the examination under the Old Regulations shall be exempted from the examination in a language under Part II of the examination under the New Regulations, but shall be required to take five papers in English, comprising the four papers under the New Regulations and one additional paper in the 17th and 18th Century Prose to be set on the text-books prescribed for the examination of 1931. This Regulation shall be in force till the September examination of 1935. There after candidates will have to appear for the examination under the Regulations then in force.
- (4) A candidate who fails to pass in Part II of the examination under the Old Regulations in a Group other than Group ii—Physical Science or Group iii—Natural Science, shall be required to take the papers set for the corresponding group under the New Regulations.

On or after 1st June 1931, candidates for the B.A. Degree examination, who had completed the first year's course of study in a non-science or Mathematics group prescribed for the examination under the Regulations in force prior to the academic year 1930—31 and had earned the certificates of attendance and progress prescribed for that year but are unable to complete the course under those regulations, will be permitted to complete the second year course of study by attending classes under the New Regulations and to appear for the examinations under the New Regulations. They shall be exempted from the production of the attendance certificates required for the first year of the course.

SYLLABUSES.

Group (i)—Mathematics.

In addition to the subjects prescribed under (a) Mathematics and (b) Physics for the Intermediate Examination, the course will comprise Algebra, Plane Trigonometry, Elements of the Calculus, Dynamics, Hydrostatics, Astronomy and Properties of Matter.

PURE MATHEMATICS.

Algebra.—Inequalities, Limits, Elementary theorems in convergence and divergence of series. The binomial theorem for a rational index. Exponential and Logarithmic series. Partial fractions, elementary methods for the summation of series. The elementary properties of continued fractions, Intermediate equations of the first degree.

Elementary properties of Determinants. Typical graphs.

$$y = ax^n, y = a|x, y = ax + b + c|x, y = ax + b + c|x^2$$

Graphical solution of cubic and biquadratic equations.

General properties of the equation of the n th degree and its roots and co-efficients. The derived functions. Simple transformations of equations. Reciprocal equations. Approximate solution of numerical equations.

Trigonometry.—Fuller treatment of the Intermediate course. Quadrilaterals inscribed in and circumscribed about circles. Regular polygons.—Limits of $\sin x$ and $\tan x$ as x tends to zero.—Inverse Trigonometrical Functions. Complex numbers and their geometrical representation. DeMoivre's theorem. Series of $\cos x$, $\sin x$, $\tan x$ in terms of x (without proof). Hyperbolic Functions. Summation of elementary trigonometrical series.

Pure Geometry.—Inversion. Orthogonal Projection. Solid Geometry.

Questions in geometry may be allowed to be answered by methods either of pure geometry or analytical geometry.

Syllabus in Geometrical Conics.

Such leading properties of conic sections as are specially suitable for treatment by elementary geometry.

Detailed Syllabus.

Focus: Directrix, definition of the conic, shape, axes of symmetry, centre, foci, the ellipse as orthogonal projection of a circle.

Geometrical treatment of the following propositions and their immediate application:

- (i) If a chord PQ of a conic, whose focus is S, meets the corresponding directrix in R, SR is a bisector of PSQ.
- (ii) The tangents from any point to a conic subtend equal or supplementary angles at a focus.
- (iii) The semi-latus rectum is a harmonic mean between the segments of a focal chord.
- (iv) The locus of midpoints of parallel chords of a conic is a diameter.
- (v) The sub-tangent of a parabola is bisected at the vertex and the subnormal is constant.
- (vi) The foot of the perpendicular from the focus on any tangent of a parabola lies on the tangent at the vertex.
- (vii) The focal-chord of a parabola parallel to the tangent at P is $\frac{1}{4}$ SP.
- (viii) $PV^2 = 4 SK \cdot KV$ where PV is an ordinate to the diameter of a parabola through K.
- (ix) The sum or difference of the focus distances of any point on a central conic is constant.
- (x) The tangent and the normal at P, bisectors of SPP. 1 in the case of a central conic and of SP and the parallel to the axis through P in the case of a parabola.
- (xi) The feet of the perpendiculars from the foci on any tangent lie on the auxiliary circle and the rectangle under these perpendiculars is constant.
- (xii) The sum of the squares of conjugate diameters of an ellipse is constant.
- (xiii) The locus of meets of perpendicular tangents to conic is a circle which reduces to a straight line when the conic is a parabola.
- (xiv) Every plane section of a right circular cone or cylinder is a conic.

Analytical Geometry.—Fuller treatment of the straight line and circle referred to rectangular axes. The parabola, ellipse and hyperbola referred to their principal axes, and the rectangular hyperbola referred to its asymptotes. Tracing of conics from the general equation of the second degree. The polar equations of the straight line, circle and the conic. Simple problems on the above.

Calculus.—Standard forms and fundamental processes of differentiation and integration. Simple applications of the derivative to geometry, algebra, mechanics and physics. Maxima and minima values of a function of one variable. Theorem of mean value (graphical proof). Taylor's and Maclaurin's Theorems (without proof). Approximations and small errors. Curve tracing. Curvature. Cartesian formula for the radius of curvature, Integration by substitution. Integration by parts. Integration regarded as summation, with simple applications to areas, volumes and surfaces and to mechanics. Differential equations of the first order and first degree. Linear differential equations of the second order with constant co-efficients.

APPLIED MATHEMATICS.

Dynamics.—Resolution and composition of displacements, velocities and accelerations. Curves of speed and velocity diagrams. Motion of a particle in one plane under constant accelerations. Simple harmonic motion; composition of simple harmonic motions. Angular velocity and angular acceleration; moment of velocity.

Absolute units of force. Resolution and composition of forces. Angular momentum; moments of inertia in simple cases; the pendulum; determination of g . Work, energy, conservation of diagrams. Impact; the ballistic pendulum. Dimensions of dynamical units. Conditions of equilibrium of a body acted on by forces in one plane. Moments and couples. Centre of mass. The theory of simple machines. Laws of friction. Graphical methods of simple applications.

Hydrostatics.—Thrust of fluid on plane and curved surfaces. Centre of pressure in simple cases. Floating bodies and conditions of stability. Properties of gases; determination of heights by barometer. Pumps; pressure gauges and hydrostatic machines. Capillary phenomena and their explanation by surface tension; general theory of surface tension.

Astronomy.—The apparent motion of the heavens. Circumpolar stars. The principal constellations and the most conspicuous stars.

The celestial sphere—Points and lines on it:—Horizon, zenith, pole meridian etc., equinoctial points etc.

Celestial co-ordinates; right ascension; declination etc., latitude and Longitude.

The transit circle, the equatorial, the clock. The transit theodolite. The sextant and chronometer.

Phenomena depending on change of latitude and longitude of the observer; Magnitude of the earth.

The apparent annual motion of the Sun. The constellations of the zodiac. The ecliptic and its obliquity. The equinoxes and the solstices. The earth's motion round the Sun. The seasons.

Sidereal time, apparent solar time, mean solar time. Equation of time. Standard time (India). Civil and astronomical reckoning. Conversion of time.

Explanations of astronomical refraction and parallax. Twilight.

Determination by observation of clock: error and rate of Right ascension and declination of a heavenly body and of the latitude and longitude of a station.

The solar system and the motion of the planets. Kepler's law. Comets and meteors.

The motion of the moon and her phases. The Plane of her orbit. The nodes and their motion. The moon's sidereal and synodic periods. Her diameter and distance.

Distances and magnitudes of the sun, moon and planets.

Causes of the eclipses of the sun and the moon. Ecliptic limits. Number of Eclipses in a year. The Calendar. The use of the Nautical Almanac.

Formulae for the solution of right angled spherical triangles. Elementary problems on diurnal motion involving the use of right-angled spherical triangles. Determination of the first point of Aries and the obliquity of the ecliptic. Precession, Nutation, Aberration.

Properties of matter.—Elasticity. Hook's Law. Compressibility of gases (at high and low pressure) and liquids. Compressibility and rigidity of solids; the elastic limits. Strains due to simple longitudinal pull; Young's modulus and its expression in terms of k and n . Bending in one plane of bars of simple cross sectional area; flexural rigidity: application to girders. Simple twisting of wires of circular cross sectional area by couple in plane at right angles to length; torsional rigidity; applications to torsion balance and shafts.

Diffusion of liquids and gases; analogy with conduction of heat, Osmosis, viscosity. Pressure of a gas and its explanation on the kinetic theory; Avogadro's hypothesis; Vander Waal's equation.

PRACTICAL PHYSICS FOR GROUP (I).

There shall be no Practical Examination in Physics for Group (i) Mathematics.

The following scheme is intended to indicate the nature and extent of the course of instruction in Practical Physics for candidates in Group (i) B.A. Degree:—

- (1) Application of the method of least squares to the treatment of a series of observations: probable error.
- (2) Observation of damped oscillations: logarithmic decrement.
- (3) Composition of simple harmonic motions of different phases, amplitudes or periods, in the same or different directions.
- (4) Calibration of a glass tube.
- (5) Comparison of aneroid and standard barometers under different conditions of temperature and pressure.
- (6) Surface tension.
- (7) Viscosity of a liquid by flow in a narrow tube.
- (8) Stress-strain curves: Young's modulus: elastic limit.
- (9) Determination of moments of inertia.
- (10) Determination of g : compound pendulum.
- (11) The balance: Zero of unloaded balance: curves of sensitiveness: ratio of arms: calibration of a set of weights.

Group (II-A)—Physics (Main).

- (1) (a) *Dynamics as in group (i) Mathematics.*
 (b) *Hydrostatics as in group (i) Mathematics.*
- (2) (a) *Properties of Matter*: Circular motion, the compound pendulum, determination of 'g' and its variation. Time, mean, solar and sidereal. Elasticity. Hook's law, compressibility and rigidity of solids. The elastic limits. Simple, longitudinal, pull and bending. Young's modulus, and its expression in terms of k and n . Twisting of wires and torsional rigidity, torsion balance. Gravitation—determination of constant. Boyle's law, variations, Vander Waals' equation, elementary kinetic theory, pressure, viscosity, effusion, transpiration and diffusion. Atmospheric pressure, variation with altitude. Production and measurement of high and low pressures, vacuum pumps and gauges.

- (h) *Heat*: Thermometry, expansion of solids, applications to temperature compensation. Expansion of liquids, apparent and absolute. Expansion of gases and gas thermometry. Calorimetry. Specific heats of solids, liquids and gases, determination of (γ). Isothermals and adiabatics. Change of state, refrigeration. Continuity of state, critical constants and liquefaction of gases. Vapour pressure.

The two laws of Thermo-dynamics. Variation of boiling and freezing points with pressure. Thermodynamic scale of temperature. Conduction, convection, and radiation. Laws of cooling, theory of exchanges. Searle's and Forbes' method of determining K. Solar constant, effective temperature of the Sun.

- (3) (a) *Light*:—Velocity of light, illumination and photometry. Elements of geometrical optics, achromatism, dispersion. Combination of two main lenses and revolving table. Eyepieces, optical instruments.

The wave theory, Huygen's theory. Reflection and refraction at plane and curved surfaces. Simple interference and diffraction phenomena. Plane-grating (normal incidence), determination of spectrum analysis, Doppler's principle, double refraction and polarization of light, polarimetry.

- (b) *Sound*: as in Physics main, B.Sc. pass degree examination with the following omissions,—'Nature of musical sounds, Loud speaker and gramophone, Musical Instruments.
- (4) (a) *Magnetism*: as in Physics main, B.Sc. pass degree examination.
- (b) *Electricity*: as in Physics main, B.Sc. pass degree examination up to the end of 'D.C. dynamos and Motors' except the following: 'The dielectric and displacement currents.'

In the place of the last paragraph substitute the following.—Applications of electricity to lighting, power transmission, telegraphy and telephony, Electric waves and simple wireless Telegraphy. Elementary X-rays, and Radio-active phenomena.

Note:—Candidates must submit to the examiners before the hour of the practical examination their laboratory note-books, duly certified by their Professors as a *bona-fide* record of work done. The laboratory note-books shall be allotted 20% of the total marks under practical, the remaining 80% being allotted to the practical examination (Main subject).

Group (ii-B)—Chemistry (Main).

Physical Chemistry: Same as that of B. Sc. (pass) Chemistry (Main).

Inorganic Chemistry: Same as that of B. Sc. (pass) Chemistry (Main) with the omission of the 1st paragraph beginning with the words "Historical development" and ending in words "quantitative period."

Organic Chemistry: Same as that of B. Sc. (pass) Chemistry (Main).

Practical examination in Chemistry shall include the following:—

(1) Qualitative analysis of Inorganic mixtures containing not more than four radicals (acids or bases).

(2) Volumetric analysis—Preparations of standard solutions, acidimetry, alkalimetry, oxidation and reduction methods involving the use of potassium permanganate, potassium dichromate, Iodometry, precipitation methods.

(3) Gravimetric analysis of Hydrochloric, Sulphuric and Phosphoric acids, copper, iron, calcium.

(4) Identification by physical and chemical tests of the following organic compounds given singly:

Methyl alcohol, Ethyl alcohol, acetone, chloroform. Formic, acetic, oxalic, tartaric, citric acids, glycerine, urea, glucose, cane-sugar, starch, benzene, aniline, phenol, resorcinol, benzaldehyde, benzoic and salicylic acids.

Note:—Candidates must submit to the examiners before the hour of the practical examination, their laboratory note-books, duly certified by their Professors as a bona-fide record of work done. The laboratory note-books shall be allotted 20% of the total marks under practical, the remaining 80% being allotted to the practical examination (Main subject).

Groups (iii-A) and (iii-B) Philosophy.

No detailed syllabus is prescribed.

Group (iv) History & Economics (History Main.)

**1. CONSTITUTIONAL HISTORY OF INDIA DURING THE
BRITISH PERIOD.**

SECTION I. INDIA UNDER THE COMPANY (1600-1858).

1. *The Company as a Trading body.*—The incorporation of the Company, under the Charter of Queen Elizabeth. Its growth and acquisition of 'Sovereign' powers under royal charters after the Restora-

tion. The struggle between rival companies after 1688 and their union under Godolphin's award. The Government of 'Factories, in general and their relation to the Indian rulers of the day.

3. *The Government of India*.—The Governor-General in Council, King-maker. Power without responsibility and its evils. The Diwani and its importance. The Regulating Act, its nature and defects. Fox's India Bill and Pitt's India Act of 1784. The ascendancy of the Board of Control. The Charter Acts of 1793, 1813, 1833 and 1853. The Mutiny and the transfer of the Indian territories to the Crown by the Act of 1858.

SECTION II. INDIA UNDER THE CROWN. (1858—1918).

1. *Home Government*.—The theoretical sovereignty of Parliament and its actual control over Indian affairs. The Secretary of State in Council and his powers. The powers of the Council. Relations of the Secretary of State with his Council and with the Government of India.

2. *The Government of India* —The Governor-General in Council, changes in the respective positions of the Governor-General and his Council since the time of the Regulating Act.

3. *The Provincial Governments*.—The growth of the Provincial system under Governors, Lieutenant-Governors and Chief Commissioners. The history of their relations with the Government of India. The policy of Centralization culminating in the Charter Act of 1833 and the process of decentralization since 1861 and 1870. The position on the eve of the Reforms of 1919.

4. *The growth of Legislative Councils*.—Executive in the role of the Legislature. The gradual process of differentiation between the two from 1833. The Indian Councils Act of 1861 and its importance. The Indian National Congress and the Indian Councils Act of 1892. Political discontent in the country and the Minto-Morley Reforms, the principles underlying them and their working.

SECTION III. TOWARDS RESPONSIBLE GOVERNMENT (1918-1935).

Events leading to the Reforms of 1919. The Great War and its effects. The Congress-League Scheme. Agitation for Home Rule.

Montagu's announcement in the House of Commons in 1917. The Joint Report and the four cardinal principles underlying the Reform Scheme.

The Division of Powers between the Centre and the Provinces, and the sub-division of the Provincial Powers between the Governor-in-Council and the Governor acting with Ministers. Dyarchy and its peculiar features. The composition and powers of the Provincial legislature. The Governor's extraordinary powers in relation to the legislature and the executive. Defects in the nature and working of dyarchy.

The Central Legislature—its composition and powers. The extra-ordinary powers of the Governor-General in Legislation.

The relaxation of control by the Secretary of State in Council over the Governments in India. The extent of Devolution and Decentralization of Power. The Government of India in its relations to the Provincial Governments.

SECTION IV. INDIA AS A FEDERATION.

1. *The forces leading to the Federation.*

2. *The division of Powers between the Central and Provincial Governments.*—The three lists. The division of powers between the Federal Government and the Indian States.

3. *The National Government.*—The Governor-General's Reserved Departments and special responsibilities. The Federal cabinet and its nature. The composition and powers of the Federal Legislature.

4. *Provincial Autonomy.*—The Governor and his Ministry. Composition and powers of the Provincial Legislature.

SECTION V. GENERAL.

1. *The judiciary.*—Its early history under royal charters. Reforms of Warren Hastings. The establishment of a Supreme Court in Calcutta in 1773 and later in Madras and Bombay. The Amending Act of 1781. The History of the Company's courts. Their amalgamation with the Supreme Courts under the Indian High Courts Act of 1861. Subsequent changes under the Acts of 1911, 1919 and 1935. The

establishment of a Federal Court. The organization of subordinate courts. Appeals to the Privy Council.

2. *Local Self-Government*.—Municipal Government in the Presidency Towns. The Acts of 1842 and 1850. Need felt for local taxation after 1858. Lord Mayo's decentralization scheme. The Resolution of Lord Ripon and its importance. The extent of advance before the Reforms. The first principle in the Joint Report and the Local Self-Government Resolution of 1918. Progress since 1920.

3. *The Public Services*.—The early history of the services and their reform under Lord Cornwallis. The Competitive system since 1854. The problem of Indianisation. The Acts of 1861 and 1870. The Statutory Civil Service. The Aichison Commission and their recommendations. The system of listed posts. The recommendations of the Joint Report. The Services in relation to the Ministers. Their privileges. The Lee Commission and its recommendation. The Present position.

4. *The Indian States*.—The Company's relations with them. The change of policy after the Mutiny, Guarantee of their permanence in the Indian political system followed by increasing control of the Paramount power over their affairs. A new policy since 1906. The establishment of Chamber of Princes. The rights and obligations of the States. Nature of Paramountcy. How far Paramountcy is affected by their entry into the Federation.

2. POLITICS.

SECTION I. The nature of Political Science—Definition of Political Science—Its scope—The methods of Political Science—Its relation to other sciences like Economic, Ethics. Sociology and Psychology.

SECTION II. The nature of the State—Definition of the State—The State as distinguished from other Associations—The constituent Elements and Attributes of the State—Population, territory, Government, Sovereignty, State in relation to Nation and Nationality—Development of the principle of Nationalism.

Historical origin of the State—Influence of kinship, religion, industry, and war—The evolution of the State—The Tribal State—The City State—The Oriental Empire—The Roman Empire—The Feudal State—The National State—The Modern Imperial State—Theories of the nature of the State—

The Divine Right theory—The Social Contract theory—Organic theory—The Idealistic theory.

Sovereignty—Its characteristics—Legal, political and popular sovereignty—Location of Sovereignty—Limitations on Sovereignty—Modern attacks on the theory of Sovereignty.

Liberty—Its relation to Sovereignty—Different kinds of liberty—Their mutual relations.

Equality—Different kinds of equality—Their mutual relations—Relation between Liberty and Equality.

Rights—Natural rights—Fundamental rights—Guarantee of rights—Rights of the Individual and of the Group.

Law—Development of Law—Enactment and creation of Law.

Forms of State and of Government—Monarchy—Its strength and weakness—Aristocracy, its strength and weakness—Democracy, its strength and weakness—Cabinet Government—Presidential Government—Unitary and Federal Governments.

SECTION III. The organisation of the State—Constitutions—Written and unwritten constitutions—Rigid and flexible constitutions—Amendment and growth of constitutions—Conventions—Judicial interpretations.

Separation of powers—Theory of the separation of powers—Criticism.

The Electorate—Nature of the electoral function—Arguments for and against universal suffrage—Minority representation—Proportional representation—Territorial versus functional representation—Compulsory voting.

The Legislature—Merits and defects of the Bicameral system—Structure, composition and powers of Upper Houses in the more prominent States—Structure, composition and powers of Lower Houses—Relation between the electorate and the representative—Organisation and procedure of the Legislatures—Defects of representative legislatures—Referendum, Initiative and Recall.

The Executive—Nominal and real executive—Parliamentary and Presidential executive—Their relative merits and defects—The working of the Parliamentary executive in England and France.

The Judiciary—Functions of the Judiciary—Organisation of the Judiciary—Selection and tenure of judges—Relation of the judiciary to the executive—Administrative Law and Administrative Justice—Relation of Judiciary to Legislature.

Political parties—Their functions—Two party system and Multiple-party system—Public opinion—its nature—Its formulation.

Federal Government—Sovereignty in the Federal State—Division of powers—Advantages and disadvantages of Federal Governments.

Local Government—Administrative areas for purposes of Local Government—Relations with Central Government.

Associations of States—Personal Unions—Real Unions—Confederations—The British Commonwealth of Nations—Conduct of international relations—Nature and aims of the League of Nations.

SECTION IV. The Functions of the State—The ends of the State—The nature of the functions of the modern State—Compulsory and optional functions.

Theories of State functions—Anarchism—Individualism—State regulation—Socialism—Syndicalism—Guild Socialism—Bolshevism—Fascism.

An outline knowledge of the working of the Governments of England, France, the United States and India is required.

Text-Books :—

1. Gettell—Political Science—Ginn & Co. (1933 edition).
2. Strong—Modern Constitutions.
3. Ilbert and Meston—The Indian Constitution.

Books for reference :—

1. Garner—Political Science and Government—American Book Company.
2. Laski—An Introduction to Politics—Allen and Unwin.
3. Petrie—A short History of Government—Methuen.

3. ECONOMICS.

[Students will be required to show a clear understanding of economic principles by intelligent application of economic theory to Indian facts and problems].

General.—The scope of Economics. Relation of Economics to their Sciences. Methods of Economic enquiry; deductive and inductive (e.g. family budgets, village and city surveys, statistics) History (in broad outline) of Economic thought.

Psychological Basis of Economics and Consumption.—Classification of Wants, Stability. Wants in relation to activities. Elastic and Inelastic Demand. Economic meaning and types of Consumption. Conception of 'Utility' and 'Value'. Economic motive; the 'Economic Man'. Influence of family system.

The Production of Wealth. Definition.—Production as (a) creation of use value, (b) creation of exchange value. Classification. Production for producer's use (a) Individual (b) Social. Production for the Market.

Factors and Production.—Natural forces and materials, soil, sun, rain, mineral, etc. The Principle of Conservation. Material capital (Classification of forms, social and individual capital). Human energies, (a) physical, (b) intellectual. Theory of population. Efficiency dependent on (a) individual physique, nutrition, knowledge, skill, moral quality, (b) social conditions e.g. social order, co-operation and division of labour. Methods of conserving past acquisitions of skill and knowledge (e.g. hereditary occupations, apprenticeship; industrial education). New acquisitions (e.g. research and invention).

Characteristics of Modern Production, Basis.—(a) Individual Property, (b) Contract. *Character* (a) Mercantile. (b) Capitalistic. *Forms.* (a) Individual (peasant and craftsman); (b) patronal (individual employer and joint stock company). (c) Co-operative. (d) Collectivist (State and Municipal). *Specialisation.* Concentration in agriculture, manufacture, transport, commerce. Horizontal and vertical combination. Competition and monopoly.

Extent to which Indian industry possesses these characteristics.

Stages of Production.—*Extractive Industries, Agriculture.*—Fishing, Forestry, Mining, etc. *Manufacture.* Laws of Diminishing Returns and Increasing Returns. *Transport and Commerce,* local, international. *Money, credit,* and *insurance* as auxiliaries to production.

Mechanism of Exchange.—Origin and functions of money. Metallic Coinage. Functions of Banks, Fiduciary money and money substitutes (Treasure notes, bank notes, cheques, bills of exchange). The rupee, India Exchange.

Exchange Value.—Theory of Value, equilibrium between Demand and Supply. Market value and normal value, Value of money: meanings of phrase. Variations in value of money.

Distribution of Wealth.—The Share of Land : Rent, Supply and Demand in relation to Land. The Ricardian Law of Rent. Economic Rent. Customary Rent. Rack-rent. The sharing of Economic rent in India.

The Share of Labour.—(i) Wages. Supply and Demand in relation to Labour. Theories of wages (a) Minimum subsistence; (b) Standard of life (c) Marginal productivity. Combinations of employers and employees in relation to wages.

(ii) *Salaries.*—Supply and Demand in relation to acquired knowledge and skill and exceptional ability.

The Share of Capital : Interest.—Supply and Demand in relation to Capital. The accumulation of capital. Conversion of capital from unspecialized forms. Interest on loanable capital, Interest on investments. Capitalization. Promotion.

The Share of Capital : Interest.—Supply and Demand in relation to Business Organization. Profits and the Entrepreneur.

The Share of the State : Taxation.—The community as worker and sharer in the product. Duties and Expenses of Government. Forms of Taxation, Protection and Free Trade.*

4. *Modern History (1500—1918).*

The syllabus shall be the same as that under Modern History under Group V—History and Economics (Economics Main).

Group (v) History and Economics (Economics Main).

1. ECONOMICS.

A. *Economics General* (A general survey of an elementary character), based on the Syllabus prescribed for Group (iv).

B. *Economics Special.*—Any two of the following subjects:—

1. *Banking and Currency* (includes money, credit, foreign exchanges and prices).

2. *Public Finance* (includes the economic functions of the State, the raising and spending of taxes and public loans and the regulations of tariffs.)

3. *Labour Problem* (includes trade unionism, socialism, labour legislation, welfare work).

4. *Indian Land Tenures* (includes the development and main features of the principal systems of land tenure in India).

5. *Rural Economics* (includes the organization and financing of agriculture with special reference to the co-operative movement in relation to agriculture).

2. MODERN HISTORY—(1500—1918.)

(1) *Introduction*—

Features of Mediaeval Europe:—Papacy—Empire—Feudalism—their decay. Decline of Byzantine Empire.

The New Age—Renaissance—Reformation—Maritime discoveries—Transfer of political power to Atlantic States—Spain—Portugal—France—Holland—England.

(2) *Sixteenth century—*

Supremacy of Spain under the Hapsburgs—

The development of the Hapsburg power and its extent under Charles V and Philip II. Its challenge to Europe :—

- (a) France, (b) Germany, (c) Netherlands, (d) England
(e) Turkey.

The relation of the Reformation and Counter Reformation to the struggle.

(3) *Seventeenth Century.—*

(A) Ascendency of France,

(i) Henry IV—Richelieu—Mazarin. Opportunity afforded by religious struggle in Germany.

(ii) France under Louis XIV—His system of Alliances: Sweden—Turkey—England. The challenge to Europe: (a) Holland (b) Spain, (c) The Empire, (d) England.

(B) Northern Europe.

Ascendency of Sweden under House of Vasa. Her challenge to North Europe: (a) Denmark, (b) The Empire, (c) Poland, (d) Russia.

(C) South-Eastern Europe.

Revival of Turkish Power—its relation to Western politics—its challenge to Austria and Poland. Position of Turkey at close of century.

(4) *Eighteenth Century.—*

The rise of England—Prussia—Russia.

(A) England—Her position in Europe and overseas after Treaty of Utrecht—Expansion and challenge to (a) France and Spain, (b) Holland.

(B) Prussia—Her position under Frederic II. His challenge to Austria and German Princes—Relation with France—Russia—England.

(C) Russia—Her position in Baltic after Treaty of Nystadt. Her challenge to (a) Germany, (b) Poland, (c) Turkey.

(5) *French Revolution.—*

(A) Its causes, characteristics and course.—Its challenge to Europe—(a) The Empire (Netherlands, Germany and Italy), (b) England.

(B) The Napoleonic Empire.

Its rise and development—its challenge to Europe:—(a) The Empire, (b) England, (c) Russia, (d) Spain, (e) Portugal, Its overthrow. Congress of Vienna.

(6) *Nineteenth Century and after.*

The challenge of Vienna to Liberalisms and Nationality. Influence of Metternich.

(A) *Liberal movements—*

- (i) 1815-1825: Germany—Spain-Italy Suppression by Quadruple Alliance.
- (ii) 1830. Revolution in France and its consequences in Austria—Hungary—Italy—Prussia—England—Collapse and reaction. Fall of Metternich—establishment of the Second Empire in France.

(B) *National movements.—*

- (i) Union of Italy.
- (ii) Unification of Germany and the establishment of the German Empire—the French Republic.

(C) *The Eastern Question.—*

Russia's challenge to Turkey—Anglo-French support to Turkey.

- (i) War of Greek Independence.
- (ii) Turko-Egyptian War.
- (iii) Crimean War.
- (iv) Balkan Risings and Russo-Turkish War. Congress of Berlin.

(D) *Growth of the Balkan State.* The Young Turk Revolution—The Balkan War—The Treaty of Bucharest.

(E) *German attempt at World Supremacy—*The Anglo-German rivalry—European Colonial ambitions—The Triple Alliance—The Triple Entente—The Great War—The Treaty of Versailles.

3. SOCIOLOGY.

1. *Introduction*: Nature and scope of the subject: its relation to Biology, psychology and other sciences. Methods of investigation; evolution in social phenomena; progress and determination, social life as influenced by physical, geographical, biological, psychological, ethical, religious and historic factors.

2. *The Family*: Its organisation and forms; maternal and paternal descent; kinship, relations and usages; relation of sexes; sexual division of labour, segregation, adoption, education, systems.

3. *Marriage*: Sexual communism, polygamy, polyandry, monogamy, exogamy and endogamy. Evolution of marriage.

4. *Forms of Social structure*: The clan, tribe, caste, race, nation; the city state, modern state, federations, empires, and other groupings. Social stratification, castes and classes and their developments.

5. *Origin and growth of moral and religious ideas*: Social value of religion; religions and their beliefs in their bearing on social relations; influence of Magic; animism; ancestorship, polytheism and world religions on social relations; religious institutions, rituals and priesthood.

6. *The Social Order*: Its development, bloodfeuds, retaliation, compensation. Primitive courts and processes; Oath and the Ordeal. Growth-

of public justice and rational procedure. Social evils and their remedies: Poverty, crime, disease, illiteracy, Depressed classes.

7. *Economic activities*; their effects on Society: Occupations and Social divisions. Property, Rank.

4. POLITICS.

N.B.—The syllabus for the above is the same as that in the case of History (Main) Group. . .

Group (vi)—One of the Languages included in Parts I and II.

1. SANSKRIT GRAMMAR.

[Knowledge, accurate, so far as it goes, but neither extensive nor minutely detailed is expected under each head. The following abbreviations are used hereunder: P.I.E.: Primitive Indo-European; Ind-Ir: Indo-Iranian, Skt: Sanskrit; Gk: Greek; Lat: Latin; Teut: Teutonic.]

A. GENERAL.

1. *Elementary Phonetics*.—(a) The organs of speech—production and classification of speech-sounds. Quantity, accent, sentence, word—and syllable-accent. Glides.

(b) Phonetic description of all speech-sounds treated in the course. Phonetic transcription.

(c) Sound-change; isolative, conditional, defective imitation and the result of analogy. Meaning of the term 'Law' in Linguistic Science. Dialect separation. Growth of Literary Languages. Families of languages. Cognate words and loan words.

2. *The Indo-European Family of Languages*.—The original speech and its earlier dialect divisions. Branches and sub-branches of the Indo-European Family. Some distinguishing characteristics of the Indo-Iranian, Hellenic, Italic and Teutonic branches.

3. *Indo-Iranian*.—The Indian Sub-Branched. Dialects of Vedic times. Epic dialects. Classical Sanskrit Middle Indian Speeches. New Indian Speeches.

B. PHONOLOGY.

4. *The P.I.E. Vowel System*.—The oldest conditions: primary vowels; changes resultant on accent; secondary vowels and syllabic liquids and nasals, Vowel-gradation quantitative and qualitative; its relation to accent and its bearing on morphology. The later P.I.E. vowel system prior to the period of language separation. General treatment of the P.I.E. vowel-system in the oldest Ind-Ir., Gk., Lat. and Teut.

5. *The vowel system of Sanskrit* in its relation to P. I. E. and to the vowel systems mentioned in 4. Vowel-gradation in Sanskrit.

6. *The P. I. E. Consonant System*—Classification of the P. I. E. consonants. Earliest dialectal variations; the 'centum' and 'satam' divisions. Treatment of the P. I. E. consonant generally in Ind-Ir., Greek and Teutonic.

7. *Representation of the P. I. E. consonant-system* in Sanskrit liquids and nasals. Plosive consonants. Cerebral consonants (Fortunatov's Law), Palatal and velar consonants, (the law of palatization). The law of aspirates (Grassman's Law) Spirants, Semi-vowels.

8. *Sandhi*, external and internal. Glides in Sanskrit Anaptyxis (Svara-bhakti). Haplology.

C. ACCIDENCE.

9. Word-formation, Base. Stem and suffix. Prefix-Infix.

10. *Sanskrit compounds, nominal and adverbial.*

11. *Sanskrit suffixes*, primary (krt) and secondary (taddhita).

12. *Nominal Declension*.—P. I. E.: conditions; Number, Grammatical Gender. Case and case-endings. P. I. E. case endings, Syncretism, Contamination. Classification of noun declensions according to suffix. Vowel and consonant-stems.

13. *The noun declensions in Sanskrit* treated historically and comparatively with reference to P. I. E. Greek, Latin and Teutonic. Philological explanation of all case-endings. Comparison of adjectives and formation of adverbs treated philologically.

14. *Numerals*.—Philological treatment of the Sanskrit numerals.

15. *Pronouns and Pronominal adjectives*.—The Sanskrit numerals.

Pronominal adjectives treated philologically with reference to P. I. E. Greek, Latin, Teutonic.

16. *The Verb*.—The P. I. E. verbal system generally treated: voice, mood, tense, augment, reduplication, personal endings. Thematic Athematic stems. Types of verbal action.

17. *The Sanskrit verb* in its relation to the P. I. E. verbal system, present, perfect, aorist and future system in Sanskrit. Transfer from the athematic to the thematic class. Periphrastic formations, Analogy in the Sanskrit verbal system. Derivative verbs—causative, denominative, desiderative, intensive.

18. *Voices, moods and tenses* in Sanskrit. Infinitive verbal formations.

2. TELUGU GRAMMAR, PROSODY AND POETICS

I భాషా ప్రకరణము.

- (1) భాషా ప్రయోజనము, దానిలక్షణము. నాగరక భాషల లేఖన పద్ధతి.
- (2) తెలుగు దెనుగు శబ్దముల వ్యుత్పత్తి. ఆంధ్రశబ్ద వ్యుత్పత్తి. తెలుగు వాడుక లోనున్న మండలములు.
- (3) తెలుగు భాషలో జేరిన భాషాంతర శబ్దములు. అందులకు గారణములు.
- (4) ఆంధ్రభాష యొక్క విధములు:—“సంస్కృత సమము, వైకృతము, ఆంధ్రదేశ్యము, అన్యదేశ్యము, అనింద్య గ్రామ్యము”—వాని స్వరూపముల ప్రదర్శనము.

II అక్షర ప్రకరణము.

- (1) ఇంటర్మీడియటు సిలబసులోని యక్షర ప్రకరణమునందలి విషయము అనువాదము.
 - (2) సంస్కృతాచ్చార్య వర్ణసమాహ్నయములు. పదాది ఋ, ఌ వర్ణములు ర, ల తుల్యములు.
 - (3) వర్ణోత్పత్తిస్థానముల దిజ్ఞాత్రి ప్రదర్శనము. వాడుకలోనికి వచ్చిన కొన్ని నూతనవర్ణములయు, కొన్ని సంయుక్తాక్షరములయు విలక్షణోచ్ఛారణము.
 - (4) ఇంటర్మీడియటు సిలబసులోని యక్షరప్రకరణమునందలి విషయము అనువాదము.
 - (5) అర్ధానుస్వారోత్పత్తి క్రమము. దిజ్ఞాత్రిము.
- సిద్ధసాధ్యనుస్వారములు. అరసున్నయుండుస్థలములను గనిపెట్టు నుపాయములు. అరసున్నలుండు ముఖ్యపదములపట్టిక. అర్ధానుస్వారి మంతరించు స్థలములు, అర్ధానుస్వారము నిత్యముగ పూర్ణమయ్యెడు స్థలములు.
- (6) అంతస్థముల లఘ్వలఘూచ్ఛారణములు. శిటరేఫముండు తావులను గుఱి టంచు నుపాయములు. శిటరేఫములుండు ముఖ్యపదములపట్టిక.
 - (7) పదాది నుండరాని వర్ణముల వివరణము. పదాది యకారవిషయమున లాక్షణికాభిప్రాయభేదములు.

చ, జ, ల దంత్యతాలవ్యభేద విషయమునందలి విశేషములు.

* పరా.—ఇందు ఇంటర్మీడియటు సిలబసు అనుమాటకు ఇంటరులో III పార్ట్ తెలుగు ఉన్నప్పటికి సిలబసు అని అర్థము.

III. పద ప్రకరణము.

(1) ప్రకృతి ప్రత్యయముల స్వరూపము. ఆగమాదేశానుబంధాను ప్రయోగాదుల లక్షణము. ప్రకృతుల చాతుర్విధ్యము. సంస్కృత సమప్రాతిపదికములు, ఆచ్ఛిక ప్రాతిపదికములు. సంస్కృత సమధాతువులు, ఆచ్ఛిక ధాతువులు. వీని దిజ్ఞాత్ర వివరములు.

(2) చతుర్విధ ప్రకృతుల వ్యుత్పన్నా వ్యుత్పన్నతాభేదముల వివరములు.

సాంస్కృతికాచ్ఛిక వ్యుత్పన్న ప్రాతిపదికములు - కృత్ప్రత్యయాంతములు - తద్ధిత ప్రత్యయాంతములు - సాంస్కృతికాచ్ఛిక ప్రకృతులందుఁ గల్గు వర్ణముల మార్పులు.

(3) (a) ఇంటరుమీడియటు సిలబసులోని పదప్రకరణమునందలి 1 విషయము అనువాదము.

(b) నామవాచకముల యవాంతరభేదములు:—సంజ్ఞానామవాచకములు, జాతీ నామవాచకములు, గుణనామవాచకములు, క్రియానామవాచకములు, నామము, నామవాచకము, వీనికిఁ గల భేదము - వాచ్యవాచకవిభేదము.

(4) (a) ఇంటరుమీడియటు సిలబసులోని పదప్రకరణమునందలి 2 విషయము అనువాదము.

(b) కొన్నియెడల మహత్వాదులు వైవక్షీకములు. స్త్రీపున్నపుంసకలింగములు, మిత్రాదుల రూపవైవిధ్యము. విశేషణవిశేష్యముల లింగసామ్యము. అందలి విశేషవిధులు.

(5) తెనుగున ద్వివచనములేదు. నిత్యైక వచనాంతములు. నిత్య బహువచనాంతములు; పూజ్యత, అజ్ఞాత, ప్రశ్నము మున్నగు స్థలములలోని బహువచన ప్రయోగము - వచనవిషయమున సంఖ్యావాచకము లందలి విశేషవిధులు, విశేషవిశేషణముల వచనసామ్యము - ఆవిషయమునందలి విశేషవిధులు.

(6) విభక్తిలక్షణము. కొన్నింటికి ప్రథమైకవచన లోపము. ఇంటరుమీడియటు సిలబసులోని పదప్రకరణమునందలి 3-వ విషయము అనువాదము-సామాన్యములగు నామవాచకములయొక్కయు, సర్వనామములయొక్కయు, ఔపవిభక్తికములయొక్కయు, విభక్త్యంతముల రూపసాధనప్రక్రియ - కొన్నియెడల ఔపవిభక్తిత్వము నియతముకాదు. విభక్తివ్యత్యాసమునందలి విశేషవిధులు - విశేషణ విశేష్య

ముల గిభక్తిసామ్యము. ఆవిషయమునందలి విశేషవిధులు. నాచువాచకములలోను సర్వ నామములలోను, ఔపవిభక్తికములలోను గల విశేషశబ్దముల విభక్త్యంత సిద్ధ రూపముల పట్టిక సర్వనామ మహాతీవాచకములు, సర్వనామముల విషయమున నితర విశేషవిధులు.

(7) విశేషణములు:— ఇంటరుమీడియటు సిలబసులోని పదప్రకరణమందలి 4 విషయము అనువాదము.

“విధేయ విశేషణములు, క్రియావిశేషణములు” అనువానివిషయమున విఫల మగు వివరణము. ఉదేశ్యవిధేయముల వివరణము. విశేష్యవిశేషణముల విపరీత వ్యవహారము. క్రియాజన్యవిశేషణములకు విశేష్యములతోఁ గల అన్వయాభాసములచ్చట్టాకార వకాగలోనాదులు విధేయ విశేషణముల కాలపురుష వచనానులందలి రూప భేదములు. క్రియావిశేషణము లవ్యయములనూట లెస్స. వీనికిని విధేయవిశేషణములకును సుజ్యంకాగుధాత్వనుప్రయోగము.

(8) క్రియలు:—

(a) ఇంటరుమీడియటు సిలబసులోని పదప్రకరణమందలి 5 విషయము అనువాదము. తదిన్దిపురీకరణము.

(b) స్వాస్థ్యేంచ గాగమము చేరునపుడు సంస్కృత సమాది ధాతువులందుఁ గల్గెడి కార్యవిశేషములు. కర్మార్థకధాతువుల స్వరూపము. ఆత్మసేవకార్థక ధాతువుల స్వరూపము. ప్రేరణార్థక ధాతువుల స్వరూపము. ప్రేరణార్థక ధాతువిశేషరూపములపట్టిక. శబ్దపల్లవధాతువుల స్వరూపము. చేయు, పోవు పాఠు మున్నగువానితో గూడిన సుజ్యంత ధాతువుల విశేషార్థములు.

(c) “సకర్మకములు, అకర్మకములు, స్వీకృతములు” అను మూడువిధములను గుఱించి విఫలముగ వివరించుట. సమాపకములు, అసమాపకములు, కర్తృబహుత్వమున నుత్తమాగ పురుషవిర్ణయములోని విశేషవిధులు.

కర్తృబహుత్వాది విషయములలో వచనవిషయమునందలి విశేషవిధులు.

వ్యతిరేక ప్రార్థనక్రియల స్వరూపము.

ఆశీర్వాస సంప్రార్థన విధ్యర్థక స్వరూప విశేషములు. సామర్థ్యార్థక క్రియల స్వరూపము. న్యూనక్రియల విశేషవిధులు. (వలయాద్విధులు) తద్ధర్మార్థకములు. ధాత్వోద్గమాత్ర బోధకములు. వ్యతిరేక క్రియలు గాలత్రయబోధకములు.

సామాన్యములగు ధాతువుల సమాపక క్రియారూపముల యొక్కయు అసమాపక క్రియారూపములయొక్కయు రూపసాధనప్రక్రియ.

విశేషధాతువుల సమాపక క్రియారూపముల యొక్కయు అసమాపక క్రియారూపములయొక్కయు పట్టిక.

క్రియల వివరమునందలి యితరవివరములు.

(9) అవ్యయములు:—

(a) ఇంటరుమీడియటు సిలబసులోని పదప్రకరణమునందలి 6 వివరము అనువాదము. తద్విపులీకరణము.

(b) లాక్షణిక ప్రతిపదోక్తావ్యయముల స్వభావములు. వాని విపులీకరణము. ముఖ్యములగు కొన్ని సాంస్కృత కావ్యయములు. ఆచ్చిక ప్రతిపదోక్తావ్యయముల పట్టిక.

అవ్యయములు, లింగ విభక్తి వచన శూన్యములను వివరముయొక్క విమర్శనము.

ఇంటరుమీడియటు సిలబసులోని పదప్రకరణమునందలి 7 వివరము అనువాదము. తద్విపులీకరణము.

IV. వాక్యప్రకరణము.

1. ఇంటరుమీడియటు సిలబసులోని వాక్యప్రకరణమునందలి 1-2 వివరముల అనువాదము.

2. (a) వాక్యలక్షణము “సోగ్యత, ఆకాంక్ష-ఆసత్తి” అను వీని వివరణము. వివిధ వాక్యవిశేషములు.

(b) “కారకమట్టుము, శేషవృత్తి, సంబోధనము” అను వీని వివరణము, ఆంధ్రవాఙ్మయమునకుల కారకవిశేషములు.

వలయాది క్రియలతోనుండు వాక్యములు విశేషములు, కర్తలలో ఆత్మార్థకమున్నప్పటి విశేషములు.

విజాతీయ కర్తృబహుత్వమున గల్గు వాక్యములందలి వచనాది విశేషములు. మహత్సూక్ష్మార్థక కర్తృక వాక్యములు.

వాక్యాంతర వ్యంజక వాక్యవిశేషములు, అధ్యాహార్యాదిపదములు.

వాక్యవివరము నందలి యితర వివరములు.

5. సంస్కృతసంధులు.

(a) సిద్ధమాస సంధి, నిత్యము.

(b) స్వరసంధులు. సవర్ణచ్చిస్థ సంధి, గుణసంధి, వృద్ధిసంధి, యణాదేశ సంధి, అయాద్యాదేశసంధి, ద్విత్వసంధి, యితర విశేషములు.

(c) హల్సంధులు, శ్చుత్వసంధి, వ్యుత్వసంధి, జశ్చుత్వసంధి చర్త్యుత్వసంధి, లకారపరక తకారసంధి మకార సకార సంధులు, పరసవర్ణాదేశసంధి, చకార ద్విత్వము, ఫ్రలోపాదిసంధి, యితర విశేషములు.

(d) విసర్గసంధులు. విసర్గమునకు శ, ష, స, రేఫలు వచ్చుట. శ, మ, స, రేఫలకు విసర్గమువచ్చుట. జిహ్వమూలీ యౌపధ్మాసీయములు, ఇతర విశేషములు.

(e) సిద్ధసమాసాశ్రయ విధులు.

(f) సిద్ధసమాసాంతవిధులు.

V. ఛందః ప్రకరణము.

ఇంటరు మీడియట్టు నిలబడులోని ఛందః ప్రకరణము అనువాదము.

(a) గురులఘు మాత్రాదిలక్షణముల విశేషములు.

(b) ఇనేంద్రచంద్రగణములను బ్రస్తావకమునఁజూపుట.

(c) యత్రిప్రాస స్వరూప స్వభావముల వైఫల్యము. స్వరయతి, ప్లుతయతి, వ్రాణయతి, వర్గయతి, బిందుయతి, సరసయతి, యెక్కటియతి, అఖండయతి, ముకారయతి, అభేదయతి, అను వీని స్వరూపములు.

(d) జాతులు; ద్విపద, ఆక్కర, ఉత్సాహము ఉపజాతులలోని నీన భేదాది విశేషములు.

(e) వృత్తములు:—పంచచామరము, స్రగ్ధర, మాలిని, తరలము, దండకము, పఠనీయగ్రంథస్థ పద్యలక్షణములు.

(f) కృత్యాది నియమములు.

VI. అలంకార శాస్త్ర ప్రకరణము

1. ఇంటరుమీడియట్టు నిలబడులోని అలంకార శాస్త్ర ప్రకరణము అనువాదము.

2. (a) కావ్యప్రయోజనములు. కావ్యలక్షణము. కావ్యభేదములు. దృశ్య కావ్యములు శ్రవ్య కావ్యములు. గుణపర్యవసాయ కావ్యములు. దుఃఖ పర్యవసాయ కావ్యములు. మహాకావ్యము ఖండకావ్యము తుద్రకావ్యము.

(b) నాయకలక్షణము. చతుర్విధనాయకులు. శృంగారనాయకులు. త్రివిధ నాయకులు. అష్టవిధ శృంగారనాయకులు. ప్రతి నాయకుడూ. ఊతమర్దనాయకుడూ. విదూషకాదులు.

(c) కావ్యగుణములు. శ్లేష, ప్రసాదము, మాధుర్యము, అర్థవ్యక్తి, సమాధి, కాంతి.

(d) కావ్యదోషములు. శబ్దదోషములు.—వ్యర్థము, పునరుక్తి, అపుష్టార్థము, వివిధగ్రామ్యములు, పరుషము, అర్థదోషములు. లక్షిలము, పునరుక్తి, వ్యర్థము విరుద్ధము, అనాచిత్యము.

(e) వాక్యదోషములు.

(f) అలంకారములు—

శబ్దాలంకారములు.—అనుప్రాస విశేషములు, యమకము, ముక్తపదప్రస్తము.

అర్థాలంకారములు—ఉపమాభేదములు, అన్వయము, రూపక భేదములు, ఉత్పేక్షాభేదములు, అతిశయోక్తిభేదములు, సంజేహము, భ్రాంతిమంతము, మిలితము, విరోధాభాసము, విభావన, విశేషోక్తి. విషయము, తుల్యయోగిత, దృష్టాంతము, వ్యతిరేకము, శ్లేష, పరికరము, వ్యాజస్తుతి, సమాసోక్తి, అప్రస్తుత ప్రశంస, కావ్య లింగము, అర్థాంతరన్యాసభేదములు. స్వభావోక్తి కలంకారత్వనిర్ణయము, అర్థాపత్తి, యథాసంఖ్యము, సారము, సంస్కృతి, సంకరము.

(g) రసస్వరూపము, రసదశకము, విభావానుభావసంచారిభావసాత్త్విక భావములు. స్థాయిభావదశకము.

(h) పాత్రాచిత్యము.

(i) కావ్యకథావస్తు సందర్భ కాళము.

8. THE COMPARATIVE GRAMMAR OF THE DRAVIDIAN LANGUAGES

I. *Introductory* :—The origin of language. Classification of languages. Dialectal separation and growth of literary standard languages. Dialects and Cognate languages.

II. *Introductory* (continued).—The Dravidian group of languages and their chief characteristics. Reasons for choosing the word Dravidian as name of this group. Enumeration of Dravidian languages. Meaning of the names 'Tamil', 'Telugu', 'Kanarese', and 'Malayalam'. Where they are spoken.

III. *Introductory* (continued).—Relation between Dravidian languages and Sanskrit, Dravidian element in North Indian vernaculars. Affiliation of Dravidian language to the Scythian Group. Tamil, the most primitive of Dravidian languages.

IV. *Phonetics*.—Production and classification of speech sounds. Sound changes and their causes. Sounds and symbols. Conditions of a good orthography.

V. *Dravidian alphabets*.—Their history. Differences among existing alphabets. Their adequacy and inadequacy. Comparison of Dravidian sounds with Sanskrit and English sounds.

VI. *Dravidian Phonology*.—The primitive Dravidian parent language.

(1) Vowel system—Changes. Accent. Harmonic sequence of vowels.

(2) System of consonants.—Origin of cerebrals. Dialectic interchange of consonants. Euphonic permutation of consonants. Sandhi. Nasalization. Anusvara and Ardhanusvara. Prevention of hiatus.

(3) Dravidian syllabation.

VII. *Roots*.—Dravidian roots arranged into two classes. Verbal root. Nouns. Lengthening of roots. Formative addition to roots.

VIII. *Accidence*:

(1) *The Nouns*.—

(a) Gender.—Dravidian nouns divided into two classes denoting rational beings and irrational things except in Telugu in which they are classified as Mahat and Amahat, the latter including words denoting women. Comparison between Dravidian languages on the one hand and Sanskrit and English on the other.

(b) Number.—Singular and plural. No dual. Singular Masculine, feminine and neuter. Plural—principles of pluralization.

(c) Case.—Principles of case-formation. Dravidian cases.

(2) *The adjectives*.—Their agreement with substantives like those in Sanskrit. Formation of adjectives from substantives, relative participles of verbs and past verbal participles. Comparison of adjectives.

(8) *The numerals*.—Different views about their origin. The cardinals and ordinals. The neuter noun of number and the numerical adjective.

(4) *The Pronouns*.—Light thrown by pronouns on relationship of languages. Persistence of personal pronouns. Pronouns of the first person singular. Comparison of dialects. Analogies. Pronouns of the second person singular. Comparison of dialects. The reflexive pronoun. Pluralization of the personal and reflexive pronoun. Demonstrative and interrogative pronouns. Demonstrative cases. Interrogative cases. Demonstrative and interrogative adjectives. Demonstrative and interrogative adverbs. Honorific demonstrative pronouns.

(5) *The verbs*.—Structure of the Dravidian verb. Roots used either as verbs or nouns. Formative particles often added to roots. Classification of verbs into transitive and intransitive. Ways in which intransitive verbs change into transitive. Sanskrit analogies.

(a) Causal verb.—Causals from transitives. Origin of Dravidian causal particle.

(b) Frequentative verbs.

(c) Conjugational system.—Formation of the tenses. Verbal participles. Their signification and forces. The present tense and its formation. The preterite tense and its formation. The future tense. The future formation in Dravidian languages. The relative participles

(d) Formation of Moods.—Method of forming the conditional, the imperative and the infinitive, origin of the infinitive suffix.

(e) The Voice.—Active and Passive—The negative voice. Combination of negative particles with verbal themes. The Dravidian negative particle.

(f) Formation of verbal nouns, derivative nouns and abstract nouns.

(6) *Adverbs*.

IX. *Vocabulary*.—(1) Borrowing and its causes. Social, commercial, political and religious. Borrowings from Sanskrit, borrowings from other languages.

(2) Structure and form.—The essentials for the individuality of a language. Vocabulary cannot change the character of a language. Hybrids Gain and loss from the mixed character of a language.

X. *Comparative Syntax*.—The Syntax of the several languages compared. Differences and similarities. The extent of Sanskrit influence over the syntax of the several languages.

THE HISTORY OF THE TELUGU LANGUAGE AND GRAMMAR

I. General.—The origin and meaning of the word 'Telugu'. The place of Telugu in the Dravidian family of languages. Its antiquity and its geographical distribution. Period of its early cultivation as inferred from the inscriptions. The extent of Sanskrit influence over Telugu Grammar.

II. Periods of Telugu Language.—The pre-Nannayya period, the Nannayya period, and the post-Nannayya period: Illustrative literature of each period. Grammar of each period. Difference between languages of different periods in point of vocabulary and grammar.

III. Language and Dialect.—The standard of literary language and spoken language. Their relation and mutual influence. Dialects. How-formed. Different localities and different classes of people in the same locality have different dialects. Are dialects discernible in ancient literary works?

IV. Telugu Alphabet—

(a) The Script.—Its gradual development. The Telugu-Kanarese form and its relation to Brahmi, Vengi and Chalukya script.

(b) The sound-values—How far the alphabet is phonetic. Its pronunciation. The spoken sounds and the written symbols.

V. Phonology.—Vowels and their relation to the primitive Dravidian vowel-system. Classification of vowels according to the place of production. Diphthongs. Accent and emphasis. Accent determining change. Mutation of vowels. Vowel harmony, vowel sandhi.

VI. Phonology (continued).—Consonants and their relation to the primitive Dravidian consonants. Classification of Telugu consonants according to the place of production. Consonantal diphthongs. Mutation of consonants. Assimilation of consonants and consonantal sandhi. Other changes in consonants. Palatalization, Dentalization, Voicing, Unvoicing, Compensatory length, etc. The theory of ardhanusvara and the cacuminal. Dialectic interchange of consonants. Telugu syllabation.

VII. Accidence.—Nouns. Gender. Nouns denoting *mahat* and *amahat* Number. No dual. Principles of pluralization. Different treatment of *tatsama* and *acchika* words with regard to the formation of number and gender. Case and case-endings. Principles of case-formation. Aupavibhaktikas.

VIII. Accidence (continued).—Adjectives. Classification of adjectives. Their agreement with substantives. Formation of adjectives from substantives. Comparison of adjectives.

IX. *Accidence* (continued).—Numerals. Ordinals and cardinals. Declension of numerals.

X. *Accidence* (continued).—Pronouns. Classification of pronouns. Declension of pronouns. History of the Telugu pronouns. Demonstrative and interrogative adjectives. Demonstrative and interrogative adverbs. Honorific demonstrative pronouns.

XI. *Accidence* (continued).—The verb. Structure of the verb. Causal verb. Atmanepada verbs. Voice: active and passive. Tense: present, past and future. Moods: conditional, imperative, infinitive and negative. Formation of verbal participles, verbal nouns, derivative nouns and abstract nouns.

XII. *Accidence* (continued).—Adverbs. No real adverbs in Telugu.

XIII. *Vocabulary*.—General character of the Telugu vocabulary. The native element. The so-called acha-Telugu. Borrowing and its causes. Formation of compounds. Coming doublets. Dravidian basic element. Tamil and Kanarese element. Causes of admixture. Various periods of entry of Tamil and Kanarese words into Telugu.

XIV. *Vocabulary* (continued).—*Tatsama* words. *Sanskritasama* and *Prakritasama*. Laws of formation. Period of extensive Prakrt borrowing. Tadbhava words. Sanskritabhava and Prakritabhava. Laws formation. Other borrowings. Hindustani, Marathi, Oriya, English, French etc.

XV. *Word-Building*.—(1) By composition. (2) By derivation. The various suffixes used to form nouns, verbs, adjectives and adverbs, etc. (3) Root-creation.

XVI. *Semantics*.—Changes in meaning and usage. Elevation and degradation. Specialization and generalization of native and foreign words. Obsolete words.

XVII. *Syntax*.—Order of words in a sentence. The difference between Prose and Poetry as regards syntax. Deviations from the normal order of words in a sentence and their causes. Sanskrit construction in Telugu.

4-A. OUTLINES OF THE HISTORY OF TELUGU LITERATURE—

(I) Pre-Nannaya Period—Beginnings of Telugu Poetry and the impetus given by the Chalukyan Kings.

(II) Age of Nannaya—1050-1250—

- (a) Nannaya's Bharatam—His style and method of translation and his personality.
- (b) Nannechoda's Kumarasambhavam.
- (c) Palkuriki Somanatha's poems—His Dwipada.
- (d) Ranganatha's Ramayanam and its authorship.

(III) Age of Tikkana—1250—1300—

(a) Tikkana's personality and genius—His style and method of translation.

(b) Ketana and Marana as his followers.

(IV) Age of Yerrana—1300—1350—

(a) Yerrana's contribution to Bharatam and his claim to be regarded as Prabandha Parameswara.

(b) His Harivamśam compared with that of Nachena Somana.

(c) Bhaskara Ramayanam and its authorship.

(V) Age of Sreenadha—1350—1500—

(a) Growth of Prabandha Literature and Sreenadha's contribution to it—His works and style and personality.

(b) Bhagavatam and its authorship and Potana's lyrical nature.

(c) Some important other poets of the age, such as Ananta Amatya and Jakkana, etc.

(VI) Age of Krishna Deva Raya—1500—1600—

Achievement of Prabandha Poetry and a general study of some of the best prabandhas of the age.

(VII) Nayaka Literature—1600—1775—

(a) Growth of various types of literature and their characteristics.

(b) Tanjore, Madura and Pudukotah Schools.

(VIII) Age of decadence—1775—1875—

Signs of decadence and its causes.

(IX) Modern age—1875—

Modern tendencies and the circumstances which influence them.

N.B.—In the case of all major poets, their personalities are to be understood in relation to their works and times.

5. THE HISTORY OF THE KANNADA LANGUAGE AND GRAMMAR

I. *General*.—The Origin and meaning of the word 'Kanarese.' The place of 'Kanarese' in the Dravidian family of languages. Its antiquity and its geographical distribution. Period of its early cultivation as inferred from the inscriptions. The extent of influence of Tamil, Telugu, Malayalam and Marathi, etc., if any, and of Sanskrit over Kanarese grammar.

II. *The Periods of Kanarese Language—*

(1) The period of the written ancient dialect.

(2) The period of the mediaeval dialect.

(3) The period of the modern dialect.

Illustrative literature of each period. Grammar of each period. Difference between the languages of different periods in point of vocabulary and grammar.

III. *Language and Dialect*.—The standard of literary language and the spoken language. Their relation and mutual influence. Dialects. How formed? Different localities and different dialects. Badaga, how an ancient Kanarese dialect. Are dialects discernible in ancient literary works?

IV. *Kanarese Alphabet*.—

(a) The Script.—The Kanarese alphabet a variety of the so-called Cave-character. Its gradual development. The Telugu-Kanarese form and its relation to Brahmi, Vengi and Chalukya scripts, and the script of the *sasanas of Cochin*.

(b) The sound-values.—Unlike the Tamil and Malayalam alphabet the alphabet is perfectly phonetic. The spoken sounds and the written symbols.

V. *Phonology*.—Vowel system.—Vowels in Achagannada and those borrowed from Sanskrit. Vowels and their relation to primitive Dravidian vowel system. Classification of vowels according to the place of production. Diphthongs, History of the vowel sounds. Accent and emphasis. Accent determining change. Mutation of vowels. Vowel harmony. Vowel-sandhi glides.

VI. *Phonology*. (continued)—Consonant system.—Consonants in Achagannada and those borrowed from Sanskrit. Consonants and their relation to the primitive Dravidian consonants.

Classification of consonants according to the place of production. Consonantal diphthongs. Mutation of consonants. Assimilation of Consonants. Assimilation of consonants and consonantal sandhi. History of consonantal sounds, doubling of consonants, palatalization, dentalization, voicing, unvoicing, compensatory lengthening, nasalization, dentalization, etc. Dialectic change of consonants. Theory of Kula and Kshala L's and the history of r and l. Kanarese syllabation.

VII. *Accidence*.—Nouns. (1) Gender. Are Dravidian nouns naturally neuter? Nine genders according to the grammarian Kesiraja, reducible however to three, masculine, feminine, and neuter. Gender prefixes and suffixes. Gender in metaphorical diction, etc.

(2) Number. Words plural in form, but with a dual signification. Principles of pluralization. The epicene plural, the neuter plural, double plurals. Gender and noun treatment, how they differ in old, mediaeval and modern Kanarese.

(3) Cases and case-endings in old, mediaeval and modern Kanarese. Principles of case-formation.

VIII. *Accidence* (continued).—Adjective or attribute nouns (gunavachakas). Classification of adjectives. Formation of adjectives. Their gender and agreement with substantives. Ordinary nouns and pronominal nouns used as adjectives. Adjectives used as adverbs. Comparison of adjectives.

IX. *Accidence* (continued).—Numerals. The cardinals and the ordinals, the multiplicatives, appellative nouns of number in Kanarese and the history and principles of their formation.

X. *Accidence* (continued).—Pronouns. Classification of pronouns. Their forms in the dialects of Kanarese, Declension of pronouns, History of pronouns, Reflexive pronouns, demonstrative and interrogative pronouns.

XI. *Accidence* (continued).—Verb. 1. Structure of the verb. The base, the tense suffixes. Classification of verbs into transitive and intransitive though felt but not mentioned by Kesiraja and Nagavarma, but introduced by Bhattakalanka about 400 years later. The modes of forming the causals and the transitive.

2. The passive voice. The different modes of expressing the passive significance.

3. The various modes of expressing the negative significance.

4. The imperative form of the verb, the infinitive.

5. No moods in Kanarese—the conditional or the subjunctive how expressed.

6. The primary tenses—the present, the preterite and the future, the history of their formation and their uses.

7. Other compound tenses, such as continuative perfect, imperfect future, perfective, etc., though not specified in ancient grammars, how expressed.

8. Formation of the verbal participles, verbal nouns, derivative nouns and abstract nouns.

9. The various modes of expressing the English auxiliaries in Kanarese.

10. The frequentative or iterative verbs in Kanarese, but a kind of such verbs formed by simple (fugalocharana) or triple repetition (triprayoga).

XII. *Accidence* (continued).—Adverbs, the different modes of their formation and their history.

Conjunctives and their history.

XIII. *Vocabulary*.—General character of the Kanarese vocabulary. The so called Achagannada. Borrowings and its causes. Periods of borrowing. Character and comparative extent of borrowing at each period. Hindustani, Marathi, English and Portuguese element. Loss of old words. Nature and extent.

XIV. *Vocabulary* (continued).—*Samasamskrita* words, *tatsama* words *tadbhavas*, or *apabhramsas*, laws of formation.

XV. *Word building*.—(1) By composition. (2) By derivation. The various suffixes used to form nouns, verbs, adjectives, and adverbs, etc. (3) *Root-creation*.

XVI. *Semantics*.—Changes in meaning and usage. Elevation, degradation, specialization and generalization to native and foreign words.

XVII. *Syntax*.—1. Order of words in a sentence. The difference between Prose and Poetry as regards Syntax. Deviation from the normal order of words in a sentence and their cases.

2. The different kinds of *karaka* or the relation of the noun to the verb.

3. The uses of the cases.

4. The uses of the singular for the plural and *vice versa* of nouns, pronouns and verbs in a sentence.

5. Use of the singular and plural of Sanskrit adjectives and their agreement with nouns.

6. Oriya.

N. B.—The History of Oriya Language and Literature is the same as that prescribed for *Bhasha Pravcena* Final Examination.

7. HISTORY OF KANNADA LITERATURE

Introductory: Definition of Literature—Influence of political, religious and social conditions on Literature—Classification of Kannada Literature—Variety and volume of the same—The Kannada people and their characteristic religious tolerance.

Pre-Nripatunga Period. Upto 814. A. D. Highly developed Kannada prose and poetry even as early as 5th century Northern and southern schools—*Bedanda* and *Chettana* as the two types of composition.

Durvineetha and others as prose writers, *Srivijaya* and others as versifiers—*Sri Yardhadeva* and his unique work containing 90,000 *granthas*.

Jaina Literature: The Jaina religion in the Kannada country.

Ancient Kannada Language—*Champu* form of composition.

(a) 814-1160. *Nripatunga* and his *Kavirajamarga*, the earliest extant Kannada work. Its informational importance. The three gems viz., *Pampa*, *Ponna* and *Ranna* and their works.

Other poets of the period. *Nagavarma I*, *Chavundaraya*, *Sridharacharya*, *Gunavarma*, *Nagachandra Kanti*, the earliest known Kannada poetess, *Nayasena*,

the protagonist of pure Kannada, Rajaditya, Keerthivarma, Nagavarma II, Durgasimha.

(b) 1160-1600. Nemichandra and his Leelavathi, the earliest known specimen of genuine fiction Janna, the third member of the trio (Ponna, Ranna and Janna) entitled as Poet-Emperor and his work. Andayya and his celebrated Acohagannada Kavya, viz. Kabbigarakava.

Other poets of the period, Mallikarjuna, Kesiraja, Rattakavi, Mangaraja I, Bacharasa, Mangaraja III, Abhinava Vadividyananda, Salva, Ratnakarayarni.

(c) 1600-1838. Bhattakalanka and his great Grammar, Sabdanusasana-Dharanipandita and his Bijjalacharite.

Other poets of the period. Madhava, Devachandra, Chandrasagaravarni.

Veerasaiva Literature: The rise of Lingayatism-Social and political conditions of the period-Transition from Ancient to Mediaeval Kannada-Numerous prose works.

(a) 1160-1430. Basava and his Vachanagalu.

Other poets of the period. Hareesvara, Raghavanka, Palkuriki Somanatha, Bheema Kavi.

(b) 1430-1600. Chamarasa and his Prabhulingaleela.

Other poets of the period. Singiraja, Nijagunasiva Yogi, Gubbi Mallanarya, Virupakshapandita, Shadaksharadeva.

(c) 1600-1868. Sarvajnamurti and his Padagalu.

Other poets of the period. Basavalinga, Kavi Madanna, Maruha sidda, Basavappa Sastri.

Vaishnava Literature: The rise of Vaishnavism-Ramanujacharya and his role as a religious reformer-Madhwacharya as Dwaitha Doctrinaire and inspirer of Kannada Dasakuta Literature. Transition from Mediaeval to Modern Kannada.

(a) 1160-1480: Rudrabhatta, the leading writer on Vaishnava theme-Narahari Theertha and his dwaitha lyrical songs-Kumara Vyasa and his Bharata.

(b) 1430-1750: Institution of Dasakuta-Development of Karnataka music with the composition of Dasakuta devotional songs.

Sripadaraya, Vyasaraya, Vadiraja, Purandara Dasa, Raghavendra Theertha, Varadendra Theertha, Vijaya Dasa, Gopala Dasa, Jagannatha Dasa, and their Padagalu and Suladigalu.

Other poets of the period. Kanaka Dasa, Thimmanna, Kumara Valmiki, Chatu Vittalanatha, Lakshmeesa and their works on vaishnava themes.

Sri Vaishnava poets of the period. Tirumalarya, Chikkupadhyaya, Singararya.

(c) 1750-1868. Mummadi Krishnadevaraya, Jayarayacharya, Krishna-charya and their works on Vaishnava themes.

Modern Period:—Karnata Sahitya Parishat formed—Publication of and criticism on ancient works—Translation of Sanskrit plays—Translation of novels from foreign languages—Increase of educational and informational literature—Impact of western thought and influence of English Literature on Kannadai. Adoption of dialectical language and blank verse for literary composition—Attempt at short stories, poems and plays.

Subjects for topical study:—

1. The Kannada country, its boundaries, political divisions, population and dialects.
2. Formal changes in ancient mediaeval and modern Kannada.
3. (a) Characteristics of Hindu Purana, Characteristics of Jaina Purana.
(b) Authors of Hindu Puranas, Authors of Jaina Puranas.
4. Jaina version of Ramayana, Bharatha and Bhagavatha themes.
5. Kannada writers on science and arts subjects.
6. Extent of royal patronage to Kannada literature.
7. Some great poetesses.
8. Eminent writers in both languages—Sanskrit and Kannada, Telugu and Kannada.
9. Development of Kannada prose.
10. Volume of Sataka literature.
11. Development of Kannada plays.
12. Dasakuta literature and its outstanding characteristics.
13. Some popular indigenous metres.
14. Influence of Sanskrit and English on terminology and technique of Kannada compositions.
15. Leading European scholars and their service to Kannada Language and Literature.

8. HISTORY OF THE TAMIL LANGUAGE

I. *General*.—The original and meaning of the word "Tamil". The place of Tamil in the Dravidian family of languages, its high antiquity, the geographical area where it was spoken in ancient times as referred to by old commentators, the twelve Sen-Tamil and the twelve Kodum-Tamil countries. Very early cultivation of Tamil as a literary language; the three Sangams how far historical; Agastyar; his contribution to Tamil. *Tolkappiyam*; its importance

for the study of the language. The extent of Sanskrit influence on Tamil Grammar.

II. *The periods of Tamil language.*—(1) The old or Sangam Tamil, (2) the mediaeval Tamil and (3) the modern Tamil. Illustrative literature of each period. Grammars of the different periods. Tolkappiyam Virasoliyam and Nannul. The difference between the language of the different periods in point of vocabulary and grammar.

III. *Language and Dialect.*—The standard or literary language and the spoken language. Their relation and mutual influence. The difference between the two. Sen Tamil. Kodum-Tamil. Iyal, Isai, Natakam Tamils Dialects: how formed. Different localities and different classes of people in the same locality have different dialects. Are dialects discernible in ancient literary works?

IV. *The Alphabet*—(a) *The Script.*—Its gradual development Vatteluttu, the grantha Tamil characters, their geographical distribution, origin and history. The relation of Vatteluttu and grantha Tamil characters to Brahmi. The form of Tamil characters how far determinable from Tolkappiyam and the other grammars and commentaries thereon. The dotted e and o. Gradual changes in Script. Changes credited to Boschi. (b) *The sound values.* How far the alphabet is phonetic. Its pronunciation, the spoken sounds, and the written symbols.

V. *Phonology.*—Vowels and their relation to the primitive Dravidian vowel-system. Classification of vowels according to the place of production. Diphthongs. Accent and emphasis, accent determining change, *eduttal* (rising accent.), *paduttal* (falling accent.) *nalutal* (level or vanishing accent.) The influence of accent on wordchange and in prosody: alapedai. Mutation of vowels. Vowel harmony. Vowel sandhi—glides.

VI. *Phonology (continued).*—Consonants and their relation to the primitive Dravidian consonants, classification of consonants according to the place of production. History of consonantal sounds palatalization, dentalisation, voicing, unvoicing, consonant length. Assimilation. Consonantal alapedai. Dialectal interchange of consonants. Consonantal sandhi. Laws of Tamil syllabation, the initial, the medial, the final letters in a word, the difference between Tolkappiyam and Nannul on this point. The light thrown by the rules of syllabation on the nature of loan words.

VII. *Accidence.*—(1) *Nouns.*—Gender and number; how mutually expressive and interdependent. Are Dravidian nouns naturally neuter? Gender prefixes and suffixes, the epicene plural as distinguished from the Neuter plural, the neuter plural suffixes, double plurals, gender and number treatment, how they differ in old and modern Tamil. (2) *Case.* the number of cases and Sanskrit influence, the formation of the oblique case, the inflexional base, the inflexional increments or arguments, their varied uses, the suffixes of the various

cases, their probable origin and history, the uses of the various cases. Old Tamil, modern Tamil, how they differ in the formation of cases.

VIII. *Accidence* (continued)—*The Pronoun*.—Their form in old and modern Tamil, the three persons and their plural forms, the oblique forms of the pronouns, the phonetic relationship between the oblique and the substantive forms of the pronoun. The reflexive pronouns, the demonstrative and the interrogative cases, old and modern forms. Honorific pronouns.

IX. *Accidence* (continued)—(1) *The Verbs*.—The structure of the verbs, the base, the tense infix and the pronominal suffix, classification of verbs into *tan-vinai* and *pira-vinai*. How far this classification is synonymous with 'transitive', and 'intransitive', the casuials the modes of forming the casuials and the transitives. The various casual suffixes, reduplication, Appellative verbs. (2) The passive voice, the history of *padu*, the different modes of expressing the passive significance and of negative particles in old and modern Tamil. (3) The imperative form of the verb, how the infinite is formed, the various suffixes in old and modern Tamil. The subjunctive how expressed in old and modern Tamil. (4) The Tenses;—the tense infixes (*idainilai*, the present, the preterite, and the future). Is there no reference to the present tense in the *Tolkappiyam*? The difference between the old and modern Tamil as regards the tense formation. *Kirukinru*, *t t*, *r*, and *in*; and *p*. and *v*. their history, phonetic relationship, etc., and the principles of their use (5) the relative and the verbal principle, the suffixes forming them.

X. *Accidence* (continued) *The Adjectives and the Adverbs (uricol)*.—The adjectival and the adverbial participles, their origin and history. *The numerals*, The cardinals and the ordinals and the multiplicatives, the numeral bases mainly adjectival in nature, formation of substantive numerals from the case, the principles of formation. The double forms such as *ir* and *ir*, *mu* and *mu*, etc., their uses and the laws governing them. The light thrown by the numerals on the antiquity of Tamil. *The particles (idaicol)*, their origin and significance (Interjections) and the conjunctive particles.

XI. *Vocabulary*.—The general character of the Tamil Vocabulary at different periods, the so-called pure Tamil, Borrowing, its causes. Periods of borrowing, character, comparative extent of borrowing at each period. Doublets, Telugu and Kanarese element, causes of admixture, various periods of entry of Telugu and Kanarese words into Tamil. Loss of old words. Nature and extent.

XII. *Vocabulary* (continued).—Sanskrit words; *Tatsamas*; *Sanskrit-asamas* and *Prakritasamas*. Laws of formation. *Tadbhavas Sanskritabhavas* and *Prakritabhavas*. Laws of formation. Period of extensive *Prakrita* borrowing. Other borrowings, Hindi, Portuguese, English, etc., *Mani-pravala* style. Hybrids, tests for distinguishing loan words.

XIII. *Word building in Tamil*—(1) by composition, compound words like *kadu vay*, etc. Several kinds of compounds or *tokai*:—*unmai uvamai*, etc, (2)

by derivation, the various suffixes used to form nouns, verbs, adjectives and adverbs, etc., (3) Root-creation, bank formation, double bases like, *nai, nan*, etc. Old and modern Tamil compared as regards the capacity to form new words and also the method of forming the words.

XIV. *Sementics*.—Changes in the meaning and usage. Elevation, degradation, specialisation and generalisation of native and foreign words.

XV. *Syntax*.—Order of words in a sentence. The difference between Poetry and Prose as regards syntax. Deviations from the normal order of words in a sentence and their causes. Sanskritic constructions in Tamil.

9. HISTORY OF TAMIL LITERATURE.

1. *Introductory*: Definition of Literature. Literature as reflection of a nation's life. Influence of political, religious and social conditions on literature—the Tamil people and their language.

The three divisions of ancient Tamil learning—Iyal, Isai and Natakam,

2. *Pre-historical literature*: The story of the submerged land and of the Mudal and Idai Sangams. Agastya, father of Tamil learning—historicity of his Personality—his disciples, and his works.

3. *The Sangam age*: General.

Different views regarding the date of the Sangam age. Sen-Tamil and Kodum-Tamil lands. The Cera, Sola and Pandyan kingdoms. Feudatory states—Political, social and religious conditions of the period—Aryan influences on the language and literature of the land.

Tolkappiam: Its sources—divisions—its place in the history of Tamil grammars—*Porulatikaram*—a mirror of the culture and civilisation of the times.

Sangam works: Their divisions—chronology of sangam works—selection of subject matter—Agam and Puram. Metres—absence of *painam* stories and tales in the works.

History of the Cola, Cera and Pandya kingdoms—the seven vallals.

4. *The Sangam works*—in their historical settings.

(a) *Pattupattu* or the Ten Idylls. Nakkirar, Mangudi Marudanars, Mutumakkaniyar, Rudran Kannanar, Nattattanar, Perunkousikanar, Kapilar, Napputanar.

(b) *Ettutogai* or the Eight Anthologies—their compilers and their patrons. Narrinai, Kuruntogai, Ainkurunuru, Patirrupattu, Paripadal, Kalitogai, Agananuru, Purananuru.

(c) *Patinon-kil-kanakku* or the Eighteen Minor works—Naladiyar, Nammanikkadigai, Karnarpattu, Kalavali-narpalu, Inia-narpal, Inna-narpadu, Ainthinai.

Thiru-kural, Tiru-Kadugam. Asara-kovai, Palamoli, Siru-panca-mulam, Mulu-moli kanci, Elathi, Innilai-narpalu.

(d) Some Sangam poets-Kapilar, Parananar, Auvai, Nakkirar and Thiruvalluvar.

(e) Women in the Sangam age-Royal poets-Wandering minstrels.

5. *The age of Buddhists and Jains* : Their entry into the Tamil land-literary and traditional evidences—their first homes—archaeological remains—Jains caves and Buddhist monasteries—their doctrines. South Indian school of Jainism and Buddhism.

Jain and Buddhistic works :

(a) Among the major kavyas, Silappatikaram, Manimekalai Jivaka-Cintamani.

(b) Among the minor kavyas, Nilakesi, Sutammani, Uthayanam katai.

(c) Perun-katai.

(d) Merumantira-Puranam.

(e) Lexicons-Divakaram and Pinkalantai.

(f) Vajranandi's Tamil Sangam—religious persecutions-contributions to Tamil language and literature-condition of the Tamil music and drama.

(g) Beginnings of Prose-Admixture of Sanskrit and Prakrit words-Mani-pravala style.

(h) Metrical changes-introduction of pa-meams.

6. *The age of religious revival* : 6th to 10th century A.D.

(a) Tirumandiram by Tirumular—other early and Nayanars and Alvars.

(b) The four Saiva-samaya-acharyas-their dates and their works-Tevaram, Tiruvacakam and Tirukovaiyar.

(c) The twelve Alvars-their dates and their works.

(d) Panniru-tirumurai and the four thousand divine psalms, their compilation and their contents.

(e) Pattinathar.

(f) Kalladanar.

(g) Perundevanar's Bharatam.

7. *Grammarians* : Iraiyanar Ahapporul and its annotations-their dates-Purapporul Ventramalai by Aiyandar-idanar-Ahapporul Vilakkam by Narkaviraja Nambi-Yapparum-kalam and Karikai by Gunasagarar-Nannul by Pavananthi-Virasoliyam by Buddha mitrinar-Nemi-natham by Gunavirapandithar.

8. *Later Chola period literature—10th to 12th centuries :*

Kamhan, his *Ramayana* and other works-his date-his contemporaries.

Ottakuthan-his date-his works.

Pukalenth-*Nalavenha*.

Jayan kondam-*Kalingattuparani*.

Dandiaseriyar-*Dandiyalankaram*.

Religious works and their authors : Nambiandar Nambi Sekkilar, Kachiappa Sivacaryar.

Prabhanda works-*Ulas*, *Paranis*, *Pallus*.

Music and drama of the age.

9. *Siddhanta works*, 13th and 14th centuries. *Santana kuravars* and their works-*Meikanda*, *Arulnandi*, *Umapathy* and *Marainanasambandar*.

10. *Commentators :* *Ilampurnar*-*Perairiyar*, *Senavarayar*, *Naccinarkiniyar*, *Adiyar kunallar*, *Parimelalagar*, *Sankaranamasivayar*,

11. *Mutts and their contributions* to the growth of Tamil-literature. *Tiruvavaduturai*, *Dharmapuram*, *Tirupanaaval*. Some authors-*Svaminatha desikar*, *Sivananamuniyar*, *Kumaraguruparar* and their works.

12. *15th and 16th Centuries A.D.*—*Kalameghar Irattayar*-*Niramha-Alagiya desikar*-*Ativira-rama-pandya*-*Varathunga Pandya* and their works.

Villiputturar-*Bharatam*.

Arunagiri and his works.

Paranjoti-*Thiruvilaiyadalpuranam*,

Poyyalamolipulavar, *Virakavirayar*, *Mandalapurisar*, *Thayulmanavar*.

13. *17th and 18th Centuries A.D.*—Age of *prabhandams* and *puranams*.

Pillaiperumal Aiyangar, *Padikkasupulavar*, *Nalla-pillai*.

Muhammadan and *European poets*.

14. *19th Century A.D.*—*Minakshisundaram Pillai*, *Ramalingaswamigal* and other poets.

15. *The modern age :* *Tendencies*-modern prose-political writings-drama and novels-influence of western literature on Tamil-research-work of modern Universities-Tamil journalism-some modern personages.

Books for consultation.

1. *Tamil Literature* by M.S. Purnalingam Pillai.

2. *Tamil Varalaru* by K. Srinivasa Pillai.

3. *Tamil Ilakkiya Varalaru* by K. Subrahmanya Pillai.

4. Tamil of the Saugam Age and Later Times—Mahamahopadhyaya Dr. V. Swaminatha Ayyar.
5. Tamil 1800 years ago—Kanagasabhai Pillai.
6. Pulavar charitram—Kumaraswami Pulavar.

10. EARLY SOUTH INDIAN HISTORY.

(As a related subject to Telugu, Tamil or Kannada)

1. *The limits of the Andhra Country.*—Early inhabitants and thier civilisation—The Aryan expansion Southwards. The Mauryan rule and its influence.

2. *The Andhras*; their original home; their early history; Andhras in the Puranas; the latter Andhras; the extent of the empire and its division; religion, literature, etc., under the Andhras; break up of the Andhra Empire. Contact with the outside world - commerce and colonisation.

3. *The Andhra country after the break up of the Andhra Satavahana Empire.*—The Pallavas—The Chutus—The Abhiras—The Vishnukundins.—The Salankayanas—The Vakatakas—Samudragupta's invasion—The Gangas of Kalinga.

4. *The Chalukyas.*—Their conquest of Vengi—The Eastern Chalukyan kingdom—Rajaraja—Relation with the Cholas. The Cholas in the Andhra country—Kulottunga and his successors—The Chola feudatories—The Velanate Chodas—The Telugu Chodas.

5. *The Kakatiyas.*—Foundation of the Kakatiya Power, Prola-Prataparuda, transfer of capital to Warangal—Mahadeva—Ganapati—Rudrama—Prataparudra II—Muhammadian invasion in his reign—Krishna, his son, the last ruler of the dynasty.

The Reddies of Kondavidu—The Reddies of Rajahmundry.

6. *The Muhammadan invasions and the foundation of Vijayanagar.*—

Muhammadian invasions of South India; their character, extent, and result; the empire of Muhammad Tughalak, Muhammadan possessions south of the Vindhya; Hindu struggle—Vijayanagar and the Bahamani kingdoms.

7. *Vijayanagar under the first dynasty.*—The first dynasty, Harihara and Bukka; the wars of the latter; Harihara II, assumption of imperial titles and

responsibility ; relations with the Bahamani kingdom under Harihara and his successors ; the Bahamani wars and their character ; Devaraya II, the greatest ruler of the first dynasty ; the city and the empire under him ; rise of Orissa ; alliance between Orissa and Bahamani kingdom ; Devaraya's successors ; condition of the empire.

8. *Vijayanagar under the Saluvas and the Tuluvas.*—The rise of the Saluvas ; their position in the empire ; the Bahamani and Orissa invasions ; Saluva Narasinga ; his services to the empire, Narasa, *de facto* ruler ; his son Narasimha II and general rebellion in the empire ; accession of Krishna Devaraya ; the condition of the Bahamani kingdom during this period ; wars against the Bahamani kingdom and the Raichur ; the condition of his later administration ; rise of Achyuta's brothers-in-law, the elder empire ; rebellions in the empire and last years of Krishna. Achyuta's restoration of order in the empire, character of his and the younger Tirumala ; Sadasiva ; the rule of the brothers Rama, Tirumala and Venkata.

9. *Vijayanagar under the de facto rule of the brothers.* Sadasiva, the nominal ruler ; relations with the Bahamani kingdom ; condition of the distant south ; " fishery coast " and Travancore ; foundations of the Nayakaship of Madura ; the Portuguese ; Talikota and its results ; condition of the empire.

10. *The later Empire at Penukonda.*—The new empire at Penukonda ; Tirumala ; the successors of Tirumala ; division of the empire ; Sriranga empire ; his struggle against the advance of Muhammadans ; the empire reunited under Venkata ; disaffection in the southern provinces ; wars against the Muhammadans ; end of the Viceroyalty of Seringapatam ; foundation of Mysore ; death of Venkata.

11. *The decline and fall of the Vijayanagar Empire.*—War of succession ; the weakened condition of Vijayanagar ; the province of the empire : Gingi Tanjore, Madura, Mysore, and Ikkeri, the advance of the Mughal in the Dakhan ; precarious condition of the Vijayanagar empire ; the last emperor, Sriranga ; his struggle for a united empire ; end of the empire.

10. EARLY INDIAN HISTORY ;

(As a related subject to Sanskrit or Pali).

1. Physical configuration of India. Natural divisions—Mountains—Rivers—The Sea—Deserts—Production—Position in relation to the rest of the world—Historical influence of these factors.

2. People of India—the aborigines—The civilization of the Indus Valley—The Dravidians—The Aryans—Persians—Greeks—Sakas—Yuechi—Huns—Muslim Invaders.

3. Age of the Rig Veda—geographical data and their significance—Tribes and Tribal warfare—Political organisation—Social customs and distinctions—occupations and groups—Vedic gods—Pantheism—Beginnings of Monotheism.

4. The Later Vedic Age—The later Vedas—The Brahmanas—The Aranyakas—The Upanishads—Extension of Aryan civilisation—changes in social conditions—The system of Caste Government and the administration—Industry, Arts and Science—Religion and Philosophy—Chronology of the Vedic Literature.

5. The Sutras—Epics—Puranas—Social and Political conditions as reflected in them—The rise of new religions—Jainism and Mahavira—Buddhism and Gautama Buddha.

6. Political conditions in the Buddhist age—The rise of Magadha—The Saisunagas. The Nandas—Invasion of Darius—Invasion of Alexander the Great—Effects of these invasions.

7. The Mauryan Empire—Sources—Chandragupta—Kautilya—Bindusara—Asoka—His service to Buddhism—The Mauryan system of administration—Downfall of the Mauryan Empire.

8. The Period of many Kingdoms—The Sangas—The Kanvas—The Andhras—Indo-Greek and Indo-Parthian Kingdoms—The Kushans and Kanishka—His empire—religion—Art. Alleged influence of Hellenism on Ancient Indian Culture.

9. The Gupta Empire—Samudragupta and his conquests—Chandragupta II. Vikramaditya—The Western Satraps—The later Guptas—The Huns—The decline of the Empire—The glories of the Gupta Age—Literature—Kalidasa—Art and science—Trade—The Beginnings of Modern Hinduism—The Travels of Fahien.

10. The Empire of Harsha—His conquests—His religious Policy—The travels of Hiuen Tsaing—Buddhism in its decline.

11. The History of the Deccan—The Andhras—The Chalukyas—Pulikesin II—The Rashtrakutas—The later Chalukyas—Jainism and Buddhism—Their decay—The Yadavas—The Kakatiyas—Hemadri.

12. The History of South India—Early Tamil Civilization—The Three kingdoms—the period of Pallava Supremacy—The Cholas and their Empire—The Pandyas—The Cheras—The Hoysalas—Intercourse with the West and the Far East.

13. Mediaeval Kingdoms of the North—The Rajaputs—their origin—Kashmir and its history—Rajatarangini—The Gurjara Pratihara Kingdom—Bhavabhuti and Rajasekhara—Delhi and Ajmere—Paramaras and Bhoja—The Palas and the Senas.

14. Religious and cultural movements—Decay of Buddhism—Bhagavatism—Puranic Hinduism—Siva and Vishnu Cults—Sankara and Ramanuja.

11. INDIAN HISTORY.

(As a related subject to Urdu).

N.B.—Each of the periods marks the stage in the growth and development of the Urdu language and literature.

First Period—1347—1707—Early Urdu.

1. *Preliminary.*—The early Muslim invasions from the North-West. The Sultanate of Delhi, particularly under Khilji and Tughlak dynasties. The early impact of Muslim civilization on India, and the evolution of the Urdu language in North India and in centres of Muslim Military camps in the Deccan. The fall of the Sultanate of Delhi before the Moguls. The Early Mogul Kings—Sher Shah and his reforms—Akbar and his Policy—Persian as the court language—Literary and religious movements and their effect. The later three Moguls—Their policy—Causes of the decline of the Mogul Empire.

2. *The Muslim Kingdoms of the Deccan.*—The rise of the Bahamani dynasty. The break-up of the Bahamani dominions into separate independent kingdoms—Imad Shahi dynasty of Berar; the Nizam Shahi of Ahmednagar; the Adil Shahi of Bijapur; the Barid Shahi of Bidar; and the Qutub Shahi of Golkonda. Their piecemeal annexation to the Mogul Empire. The fostering of the Urdu language at the courts of the Deccan and the patronage of the Early Urdu (Dekhani) literature in Bijapur, Ahmednagar and Golkonda.

Second period—1703-1857—Development of Urdu.

The break-up of the Mogul Empire. Provincial centres of Indian Muslim culture; Hyderabad—Deccan. Lucknow, Murshidabad (Bengal) and Arcot. The growing power of the Sikhs, the Marhattas and the East India Company. The Third Battle of Panipat and its effects on the Marhatta ascendancy. The battle of Buxar and the strengthening of the power of the East India Company. The annexation of the Carnatic. The fall of Tipu Sultan. The establishment of the British supremacy in 1818. The annexation of Oudh. The Mutiny, 1857. The death of the last Mogul emperor 1862.

Third period—1858-1920—Modern Urdu.

The Queen's Proclamation. The Viceroy (Canning to Chelmsford). The material and moral advancement of the country. The influx of western ideals and their reaction on the thought and life of the people and on their literature. The foundation of the Universities. The Printing press and the progress of Urdu literature. The use and development of journalism in India. Minto-Morely Reforms, 1900. Effects of the Great War on Indian thought and culture. Montford Reforms, 1919.

CHAPTER XL.

B.A. (HONS.) DEGREE EXAMINATION*(Regulations.)*

1. Candidates for the Degree of Bachelor of Arts (Honours) shall be required— Conditions of Admission.

- (i) to have passed the Intermediate Examination in Arts and Science of this University or the Intermediate Examination of any other Statutory Indian University accepted by the Syndicate as equivalent thereto ;
- (ii) to have undergone subsequently a further course of study in the University College as prescribed hereunder extending over a period of three years, each consisting of three consecutive terms ; and
- (iii) to have passed the Examination of the Degree hereinafter prescribed.

2. The course for the B.A. (Honours) Degree shall comprise Courses of Study.
instruction in—

- (i) English during the first year (Part I—Examination) ;
- (ii) a simple course in French or German, or Early South Indian History prescribed as a related subject for the B.A. (Pass) Degree Examination (under Part III—Group VI) in the case of candidates offering Telugu Language and Literature under Branch VI, during the first year (Part I—Examination) ;
- (iii) one of the following branches of knowledge during the three years :
 - I. Mathematics
 - II. Philosophy
 - III. History, Economics and Politics
 - IV. English Language and Literature
 - V. Sanskrit Language and Literature
 - VI. Telugu Language and Literature

* Vide foot note on the first page of a Chapter XXXII,

Eligibility for
the Degree.

3 (a) No candidate shall be eligible for the B. A. (Honours) Degree until he has passed an examination in one of the branches of knowledge contained in the courses of study.

(b) No candidate, other than those hereinafter exempted, shall be admitted to Part II examination in Honours unless he has passed in Part I.

The Examination in Part I shall be the examination in English of (1) a three hours' paper based on two prescribed text-books one for detailed study and the other for non-detailed study, the books to be prescribed being of modern publication (the paper shall be the same as for B.Sc. Degree Examination in Part I), and (2) a two hours' paper on Translation from French or German into English and *vice versa* in the case of candidates other than those offering Branch VI of the Honours Course. Three alternative passages shall be set in different Arts subjects and a three hours' paper on Early South Indian History in the case of those offering Branch VI. This last paper shall be the same as that under Part III Group (vi), B.A. (Pass) Degree Examination.

A candidate for the B.A. Honours examination may present himself for the Part I Examination (i.e. in English and Translation or Early South Indian History) at the end of the first year of the course and thereafter at his option present himself for English or Translation or Early South Indian History or English and Translation or Early South Indian History, provided that candidates who obtain qualifying marks for a pass in either English or Translation or Early South Indian History need appear again in that subject in which they failed.

A candidate shall be declared to have passed in Part I if he obtains not less than 40 per cent. in each of the papers on English, Translation and Early South Indian History. All other candidates shall be deemed to have failed in the examination. Successful candidates obtaining not less than 60 per cent. of marks in each subject (i.e., English, Translation in French or German and Early South Indian History) shall be declared to have passed with distinction in that subject.

(c) No candidate shall be admitted to the Examination in Part I unless he has passed the Intermediate Examination in Arts and Science in this University or an examination in some other University recognised by the Syndicate as equivalent thereto.

Candidates who have passed in French or German under Part II in the Intermediate Examination shall not be required to undergo the course in French or German prescribed for the Honours Degree Examination or to sit for the examination in either language.

4. Selected Pass Graduates of the University may be allowed to take the Honours Degree examination after a further period of study in the University extending over not less than two years, provided they have passed the B.A. Degree examination in the subjects for which they desire to appear. They shall be exempted from passing Part I provided they undergo one year's course in French or German or, in the case of those taking Branch VI—Telugu Language and Literature in Early South Indian History, Pass graduates of the University taking the Honours Degree Examination in Telugu Language and Literature shall be further exempted from undergoing the course in Early South Indian History if they had passed the corresponding examination in the B. A. Degree Examination.

Eligibility of Graduates for the degree.

5. A candidate for the B.A. (Honours) Degree shall appear for the Part II Examination in Honours (i) not later than the end of the fourth year after he has been admitted to the course or (ii) in the case of Bachelors of Arts proceeding to the Honours examination, not later than three years after commencing the Honours Course in the University College.

Period during which Degree should be obtained.

6. No candidate shall be permitted to undergo the examination in Part II in Honours more than once. A candidate for Part II examination shall be permitted to withdraw from the examination, provided he has not sat for the last paper in the examination and provided he has given notice of withdrawal to the Registrar within three clear days from the date of the last paper which he answered. He shall be permitted to appear again for the examination in Part II in the following year without producing any additional certificate of attendance.

For purposes of this regulation, the examination shall be in Part II the examination in one of the branches of study (including practical examination if any) in Section 2 (iii).

When B. A.
Degree is
awarded.

7. In the event of a candidate for the B.A. (Honours) Degree failing to satisfy the examiners he may be recommended by them for the B.A. Degree provided that he obtains not less than $33\frac{1}{3}$ per cent. of the total marks and not less than 25 per cent. in each division of the examination.

Failed candi-
dates permitted
to sit for B. A.
Pass Degree
Examination.

8. A candidate not already eligible for the B.A. Degree, who having failed completely in the B.A. (Honours) Degree examination, desires to appear for the B.A. Degree examination, shall be allowed to do so without the production of a further certificate of attendance in the University College.

Subjects for
Examination
and duration
of papers.

9. The course in each branch of knowledge shall be as follows ;—

BRANCH I—MATHEMATICS.

A candidate shall offer for the Honours examinations in Mathematics the following.—

A.—Pure Mathematics,

- (i) Pure Geometry including Projective Geometry.
- (ii) Co-ordinate Geometry of two and three dimensions.
- (iii) Algebra, Theory of Equations and Trigonometry.
- (iv) Differential and Integral Calculus, including Fourier's series.
- (v) Elementary Differential Equations.
- (vi) Theory of Functions.

B.—Applied Mathematics

- (i) Dynamics.
- (ii) Statics.
- (iii) Elements of Vector Analysis.

C.—Optional Group.

Any two of the following subjects:—

- (a) Gravitation and Electrostatics, (b) Statistics, (c) Astronomy, (d) Relativity, (e) Hydrostatics and Hydrodynamics, (f) Theory of vibrations and sound, (g) Thermodynamics, (h) Kinetic Theory of Gases and (i) Theory of Numbers.

There shall be eight papers for the Honours degree examination. All the papers except that on 'Theory of Numbers' shall be of three hours' duration and the paper on 'Theory of Numbers' shall be of four hours' duration. Each paper shall carry 150 marks. The first two papers shall be on (i) Pure Geometry, (ii) Co-ordinate Geometry, and (iii) Algebra, Theory of Equations and Trigonometry; the third and fourth papers on (iv) Differential and Integral Calculus, (v) Differential Equations, and (vi) Theory of Functions under A above; the fifth paper on (i) Dynamics; the sixth paper on (ii) Statics and (iii) Vector Analysis under B above; and the seventh and eighth selected from—C optional group above.

The scope of the subjects shall be indicated by the syllabuses prepared for the purpose.

BRANCH II—PHILOSOPHY.

A candidate shall offer for the Honours examination in Philosophy the following groups:

- I. General Group and
- II. Special Group.

I. The general group shall consist of the following subjects:—

- (i) Logic and Theory of Knowledge.
- (ii) Outlines of Indian Philosophy.
- (iii) History of European Philosophy with special reference to the systems of Plato, Aristotle, Descartes, Spinoza, Leibnitz, Locke, Berkeley, Hume, and Kant.

- (iv) General Psychology.
- (v) Contemporary Philosophy with special reference to a prescribed work.
- (vi) Essay.

II. The special group shall consist of any one of the following* sub-groups, A, B, or C :

A. Any two of the following :

- 1. Experimental Psychology and Mental Measurements.
- 2. Child and Educational Psychology.
- 3. Abnormal Psychology.

B. Either

- 1. Special texts on Advaita Vedanta.
- 2. Development of the Advaita doctrine studied from Gaudapada's Karika, Sankara's Brahmasutra-Bhashya and selections from Appayya Dikshita's Siddhantale-sasangraha (Chapter I-Sections I to 5, Chapter III-Sections 9 to 12 and Chapter IV—Section 5).

Or

- 1. Special texts on Visistadvaita.
- 2. Development of the Visistadvaita doctrine ”.

C. 1. Ethics.

- 2. Social Philosophy or Political Philosophy or Philosophy of Religion.

There shall be eight papers for the B. A. (Hons.) examination, each of three hours' duration. There shall be six papers one on each of the subjects including essay in the General Group and two papers one on each of the subjects in the special sub-groups A, B or C. The paper on Experimental Psychology and Mental Measurements in the special sub-group A shall be a practical test which shall comprise (i) practical examination and (ii) *viva voce* examination. At the practical examination candidates must submit to the

examiners their class records duly certified by their professors or lecturers as a *bona-fide* record of work done by the candidates. The marks for the practical test shall be distributed as follows :

Class records	40
Practical examination	40
Viva voce	20
	<hr/>
	100
	<hr/>

The scope of the subjects in the General and Special Sub-groups shall be indicated by the books recommended for study or by syllabuses where prescribed.

BRANCH III.—HISTORY, ECONOMICS AND POLITICS.

(1) A candidate shall offer for the Honours Examination in History, Economics and Politics the following Groups :—

- (i) A General Group, and
- (ii) A Special Group.

(i) The General group shall consist of the following subjects—

- (a) Indian History—any two consecutive periods from the following :—
 - (i) From the earliest times to 1200 A.D.
 - (ii) From 1200 A. D. to 1707 A. D.
 - (iii) From 1707 A. D. to the present day.
- (b) History of Europe from 1450 A. D.
- (c) Economics, and
- (d) Politics.

(ii) The Special group shall consist of the following sub-groups—

- (a) History sub-group.
- (b) Economics sub-group.
- (c) Politics sub-group.

The History sub-group shall consist of—

- (a) A special period or subject of Indian History.
- (b) A special period or subject of History of Europe.
- (c) A special period or subject of Oriental History other than Indian History (To be selected from time to time).

The Economics sub-group shall consist of—

- (a) Modern Economic History with special reference to England and India.
- (b) Two subjects relating to different branches of Economics to be selected from time to time.

The Politics sub-group shall consist of—

- (a) History of English Constitution from 1603 and the Constitution of British India.
- (b) Modern Political Thought (from the French Revolution).
- (c) A special subject to be selected from time to time.

(2) A candidate for the B. A. Honours Degree shall undergo a course and be examined in—

- (a) The subjects constituting the general group ; and
- (b) The subjects constituting any one of three special sub-groups.

(3) There shall be eight papers for the B. A. (Honours) Examination, one paper on each of the subjects comprised in the general and the special sub-groups and an 'Essay'. Each paper shall carry 100 marks.

The following change will come into effect as from the examination of 1940:—

Add the words 'from 1700 A. D.' after the words 'Modern Economic History.'

(4) The scope of the subjects in the general and special groups shall be indicated by the books recommended for study or by syllabuses prepared for the purpose.

Branch VI.—TELUGU LANGUAGE AND LITERATURE.

(1) A candidate shall offer for the Honours Examination in Telugu Language and Literature the following :—

- (a) A General part, and
- (b) A Special part.

(a) The general part shall consist of (i) prescribed text-books bearing on the different periods of Telugu literature ; (ii) the history of Telugu literature or the history of the Telugu language both of a less advanced character than those under the special part—candidates taking the literary course under the special part shall take the history of the Telugu language and those taking the linguistic course shall take the history of Telugu literature under this head ; (iii) Telugu grammar, prosody and poetics ; (iv) Elementary Sanskrit and Elementary Prakrit grammar ; and (v) Essay.

(b) The special part shall consist of either a distinctly literary course or a distinctly linguistic course.

The course under the literary group shall consist of the following subjects :—

- i. History of Telugu literature.
- ii. Principles of literary and textual criticism.
- iii. Intensive study of the literature of a prescribed period.

The course under the linguistic group shall consist of the following subjects :—

- i. History of Telugu language.
- ii. Dravidian grammar and principles of Comparative Philology.

iii. Phonetics and Dialectal study of a prescribed period or portion of the Telugu country.

(2) There shall be eight papers for the Honours Examination—five papers under the general part and three under the special part. Each paper shall be of three hours' duration and shall carry 100 marks each. The subjects for the several papers shall be arranged as follows:—

General Part.—

- i. Poetry and Drama.
- ii. Prose and History of Language or the History of Literature.
- iii. Telugu grammar; prosody and poetics.
- iv. Elementary Sanskrit and Elementary Prakrit grammar.
- v. Essay.

Special Part—*Literary group.*

- i. History of Telugu literature.
- ii. Principles of literary and textual criticism.
- iii. Special period of Telugu literature.

Special Part—*Linguistic group.*

- i. History of the Telugu language.
- ii. Dravidian grammar and Principles of Comparative Philology.
- iii. Phonetics and Dialectal study.

Marks qualifying for a pass.

10. A candidate shall be declared to have taken Honours in one of the Branches of Knowledge for the B.A. Honours Degree if he obtains not less than 40 per cent of the total marks and not less than 30 percent in each division of the examination, provided candidates taking Honours in Branch VI—Telugu Language and Literature shall obtain not less than 35 per cent in each division and also a special minimum of 30 per cent for the two papers on Telugu grammar. Prosody and Poetics and Elementary Sanskrit and Elementary Prakrit Grammar taken together under the General part. The divisions in the several branches shall be as follow:

BRANCH—I—MATHEMATICS.

- (i) Pure Mathematics ; and
- (ii) Applied Mathematics and the subjects under C—Optional group.

BRANCH II—PHILOSOPHY.

- (i) The general group of subjects ; and
- (ii) The special sub-group of subjects.

BRANCH III—HISTORY, ECONOMICS AND POLITICS.

- (i) The general group of subjects ;
- (ii) The special sub-group of subjects ; and
- (iii) Essay.

BRANCH VI TELUGU LANGUAGE AND LITERATURE.

- (i) The general part ; and
- (ii) The special part.

11. Candidates obtaining Honours shall be ranked in the order of proficiency as determined by the total marks obtained by each and shall be arranged in three classes :

Classification
of successful
candidates.

The *first*, consisting of those who obtain not less than 60 per cent ; the *second*, of those who obtain not less than 50 per cent ; and the *third*, of those who obtain not less than 40 per cent of the total marks.

SYLLABUSES.**PART I.****French.**

First Term : The Alphabet and sounds. Pronunciation. Elementary Grammar. The articles, simple verbs and the more usual nouns and adjectives with their genders. Easy sentence and phrase drill.

Second Term : Exercises in Translation. The auxiliaries and the more frequent regular and irregular verbs (pouvoir, falloir, vouloir etc.) The peculiarities of the four conjugations. The use of the Perfect, Imperfect and Preterite tenses. Idioms and *Groupes fixes* taken exclusively from the text-books prescribed for a particular examination. Written Translations and Explanations of texts.

Third Term : Training in rapid translation at sight ; graded exercises of unseen passages, preferably from works pertaining to their subject. Revision of

the important elements of Grammar syntax, Peculiarities of the Subjunctive and other moods which entail difficulty in translation.

German.

First Term : The Alphabet and sounds Elementary Grammar ; the articles, vocabulary of simple verbs, nouns and other words with due regard to their frequency ; easy sentence and phrase drill.

Second Term : Exercises in translation from text ; complex and compound sentences made up of gerundial and participle classes : familiarisation of more complicated forms of construction, regular, irregular, separable and inseparable verbs, idioms and set phrases taken exclusively from text-books prescribed for a particular examination, enlargement of vocabulary, use of dictionary.

Third Term : Training in visual mental translation, graded exercises of unseen passages ; grouping of students according to subject and making them translate extracts from publications pertaining to their special subjects ; revision of the most important elements.

PART II

Mathematics.

A—PURE MATHEMATICS.

1 and 2 Pure and Analytical Geometry.

(a) Plane Geometry.

The metrical properties of the point, the straight line, the circle, the parabola, the ellipse and hyperbola treated by pure geometric methods, by means of Cartesian co-ordinates, polar co-ordinates and trilinear and areal co-ordinates.

Cross ratios, Harmonic ranges and pencils, Involution ranges and pencils. Perspective. Principle of duality. Reciprocation with respect to conics. Line co-ordinates, application of tangential equations to conics. Projection. Imaginary points and lines. Circular points and lines. Projective properties of conics. Invariants of conics and the corresponding geometric relations.

*(b) Solid Geometry :

Fuller treatment of the Intermediate course.

The line, plane and the regular solids treated by pure geometric methods.

* The following changes will come into effect as from the examination of 1940 :—

(c) In Chapter XL (B.A. Hons. Degree Examination)—

(i) Page 886 *omit* line 81 reading " Fuller treatment of the Intermediate course."

(ii) Page 887 line 12 *omit* the words " Elementary differential Geometry " and *add* after " three dimensions " in line 5 the following :—

"Curvature and torsion of space curves, indicatrix of a surface principal sections and radii of curvature."

Analytic Geometry of three dimensions with cartesian co-ordinates:

The straight line, the plane, the sphere, the cone, the quadrics, their plane sections and generating lines. Confocal quadrics. The reduction of the general equation of the second degree. Elementary differential geometry (Standard as in Bell's Co-ordinate Geometry of three Dimensions.)

3. Algebra and Theory of Equations including Trigonometry:

Inequalities and limits. Convergence and divergence of series and of infinite products. Binomial and Exponential Theorems. Logarithmic series. Summation of series. Theory of numbers. Elementary propositions in Probability. (Standard as in O. Smith's Algebra.)

Theory of Equations: Relation between the roots and coefficients. Symmetric functions of the roots, transformation of equations, binomial and reciprocal equations, properties of derived function, Rolle's theorems. Location of the roots. Sturm's theorem. Solution of numerical equations by Horner's method. Graphical solution of equations. Determinants and Elimination (Standard as in Burnside and Panton's Theory of Equations).

Plane Trigonometry:—Fuller treatment of the B.A. (pass) course.

Properties of triangle and quadrilaterals. Complex numbers. De Moivre's Theorem and applications. Factorisation. Infinite series. Convergence of complex series. The power series. Trigonometrical expansions. Determination of " Summation of series. Elementary properties of hyperbolic functions. Convergence of infinite products. Expressions for the Sine and Cosine as infinite products (Standard as in Loney's Trigonometry and treatment as in Hobson's Trigonometry.)

4. Differential and integral Calculus and Infinite Series and Integrals.

Functions of one real variable. Derivatives, general theorems and rules for differentiation, repeated differentiation, Leibnitz's theorem. General theorems concerning derivatives. Rolle's theorem, mean value theorem. Geometrical applications of derivatives. Integration as the operation inverse to differentiation, standard forms and processes of integration. The general mean value theorem of the differential calculus, applications to maxima and minima, to evaluation of limits, and to contact of plane curves, Envelopes, Taylor's series, convergence of the standard Taylor series. Integration of bounded functions according to Riemann, integrability of continuous functions and monotonic functions, the fundamental theorem of the integral calculus. The first and second mean value theorems of the integral calculus. Functions defined by the definite integrals, their continuity, differentiation and integration. Applications of definite integrals.

Functions of several real variables, continuity. Implicit functions, idea of their existence (without proof), Partial derivatives, differentiation, implicit

functions and composite functions, Euler's theorem on homogeneous functions Taylor's theorem for functions of several variables, simple applications to maxima and minima, and to the finding of singular points and asymptotes of algebraic curves. Double integrals, line integrals, surface integrals, and triple integrals—evaluation in simple cases. Green's theorem. Geometric applications of multiple integrals.

Infinite Series and Infinite Integrals:

Series of positive terms.

Simpler tests of convergence. Series of positive and negative terms, Abel's and Dirichlet's tests. Absolute convergence, effect of change of order of terms on sum. Absolutely convergent double series. Multiplication of absolutely convergent series.

Series of variable terms: Uniform convergence. Weierstrass's M-test, chief properties of uniformly convergent series as regards continuity, differentiation and integration. Fundamental properties of power series, standard power series. Fourier series of bounded functions with a finite number of maxima and minima and a finite number of discontinuities. Infinite products, the standard infinite products.

Infinite integrals: Functions defined by infinite integrals. Uniformly convergent integrals, their continuity, sufficient conditions for differentiating and integrating under the sign of integration, simple applications to the evaluation of infinite integrals.

5. Differential Equations,

(a) Ordinary Differential Equations involving two variables:—

Formation of differential equations, character of solutions, geometrical meaning of differential equations.

Equations of first order.—Variables separable, linear equation, Bernoulli's equation, homogeneous equation, one variable absent, $Mdx + Ndy = 0$, integrating factors and their discovery in simple cases. Equations of n 'th degree that can be resolved into component equations of 1st degree equations solvable for x or for y , Clairaut's form. Singular solutions, the t —and C —discriminants, geometric interpretation.

Linear equations with constant coefficients; Euler's linear equations. Exact equations.

The equation $y^{(n)} = f(x), y^{(n)} = f(y), y^{(n)} = f\left\{ y^{(n-1)} \right\}.$
 $y^{(n)} = f\left\{ y^{(n-2)} \right\}.$ Depression of order when one variable is absent.

Equations of second order.—The complete solution in terms of known integral relation between integrals. Geometric applications, finding of curves with given properties, trajectories.

(b) *Ordinary Differential Equations involving more than two Variables.*—

Simultaneous linear differential equations, the equation $dx | P = dy | Q = dz | R$ and its geometrical interpretation. Total differential equations (with three variables), the condition of integrability, geometric interpretation of the equation and its solution.

(c) *Partial Differential Equations.*—

Their derivation, classification of integrals of partial differential equation $Pp + Qq = R$. Charpit's method. The standard forms.

$$\Psi(p, q) = 0, \Psi(z, p, q) = 0, \Phi(x, p) = \Psi(y, q) \text{ and } z = px + qy + \Phi(q, p).$$

6. *Theory of Functions.*

Preliminary.—Irrational numbers. Simple notions as to their genesis obtained from the intuitional properties of the straight line. The linear, continuum, infinite sequences, limiting points, upper and lower limits. General principle of convergence. General idea of a function of a real variable, the elementary functions and their graphical treatment. Limits of functions of a continuous variable, continuity of functions, properties of continuous functions. Inverse functions, proof of existence when original function is steadily increasing or decreasing.

Uniform Functions of a complex variable.—

Complex numbers, their geometric representation. De Moivre's Theorem, Definition of a function of a complex variable, uniformity and multiformity of functions. Analytic functions, the Cauchy-Riemann definition, the differential equations satisfied by the real and imaginary parts of an analytic function. Conformal representation of one plane on another, complete discussion of transformations.

$$= \frac{a z + b}{c z + d} \omega = z_n \quad (n \text{ a positive integer}).$$

$$\omega = e^z \text{ (with simple variations).}$$

Cauchy's Theorem for simple Contours and functions which are analytic inside and on the contour. The fundamental formula

$$f'(x) = \frac{1}{2\pi i} \oint \frac{f(z)}{z-x} dz. \quad \text{Taylor's series, Liouville's and Laurent's}$$

expansion. Point at infinity, development in its domain. Weierstrass's theorem on the asymptotic behaviour in the domain of an isolated essential singularity. Weierstrass's theorem on a series of analytic functions. Fundamental theorem on residues with simple applications, including evaluation of simple definite integrals.

Weierstrass's theorem on the infinite product expression for an integral function. Mittag Leffler's theorem on the expression of a function with isolated singularities as a series of rational functions.

Simple periodic functions, expansion of an integral simple periodic function. The impossibility of a uniform analytic function having three independent periods. Elliptic functions, their general properties about the sum of the residues, the number of zeroes and the number of poles, the difference between the sum of the zeroes and the sum of the poles in a parallelogram of periods, algebraic relation between elliptic functions of the same periods. The Weierstrassian function $P(\omega)$ and its fundamental properties.

The fundamental properties of power series of a complex variable, element of an analytic function, the process of analytic continuation. Weierstrass's conception of an analytic function. Singular points, their place in the Weierstrassian Theory. Functions with natural boundaries, simple examples.

B—APPLIED MATHEMATICS.

(i) Statics.

Forces at a point.—Parallelogram of forces. Parallelopiped of forces. Geometric and analytic reduction of forces acting at a point. Conditions of equilibrium of such forces. Friction. Equilibrium of a particle on smooth and rough curves and surfaces.

Forces in one plane.—Parallel forces. Theory of moments of forces and of couples, reduction of coplanar forces and conditions of equilibrium of such forces. Action at smooth and rough hinges and joints. Principle of virtual work as applied to coplanar forces. Astatic equilibrium.

Graphical Statics.—Centres of gravity of arc, plane area, surface and solid, Stable and unstable equilibrium. Machines with and without friction.

Forces in three dimensions acting on a rigid body.—Reduction of such forces to a force and a couple; general conditions of equilibrium, principle of work applied to any system of forces. Work or potential function. Stable and unstable equilibrium. Poinsot's central axis; wrench, screw, resultant wrench of two given wrenches. The cylindroid. Reciprocal screws. Reduction of any system to the forces. Conjugate lines. Null lines and null planes.

Equilibrium of strings.—General conditions of equilibrium of an inextensible string. The common catenary, the parabola of suspension bridge, the catenary of uniform strength, strings on smooth surfaces and curves, strings on rough curves, strings under central forces, extensible string.

(ii) *Dynamics.*

(A) *Dynamics of Particle.*

Preliminary.

Velocity and acceleration, relative motion, angular velocity, laws of motion, impulsive forces. Units.

Rectilinear motion.

Equations of motion, simple harmonic motion, constant disturbing forces, periodic disturbing forces, damped and forced oscillations, various laws of resistance.

Motion in two dimensions.

(1) *Cartesian Co-ordinates*.—Composition of simple harmonic motions, motion of a projectile in vacuum, in a resisting medium, different laws of resistance. Equation of energy. Rotation of axes.

(2) *Polar Co-ordinates*.—Velocity and acceleration in polar co-ordinates. Central forces, differential equation of orbit, orbit for various laws of force. Disturbed circular orbit; apses. Law of the inverse square; construction of orbit, hodograph, time of describing an arc; Kepler's law, correction to 3rd law; perturbations.

(3) *Constrained Motion*.—Tangential and normal accelerations. Motion on a fixed smooth or rough curve. Motion in a smooth or rough cycloid, motion in a circle, time of describing an arc, series for time of oscillation, small oscillations of simple pendulum under resistance proportional to square of velocity. Motion on a revolving curve; motion of a particle in a revolving tube.

(4) *Motion of two or more particles*.—Principles of conservation of energy and of angular momentum. Two particles connected by a string passing over a pulley. Impulses, motion of a chain, motion of varying mass.

(B) *Dynamics of a Rigid Body.*

Moments and products of inertia, momental ellipsoid, momental ellipsee, equimomental systems. Principal axes. D'Alembert's principle; general equations of motion. Independence of translation and rotation. Impulsive forces.

Motion about a fixed axis.—Fundamental theorem. The compound pendulum, centre of oscillation. Torsional oscillations, bifilar suspension. Pressures on the fixed axis, bodies symmetrical and not symmetrical. The ballistic pendulum. Impulsive forces, centre of percussion.

Motion in two dimensions.—Finite forces. General principles of conservation of energy and of linear and angular momentum. System with one degree of freedom, oscillations about equilibrium. Impulsive forces,

impact of a rotating sphere on the ground. Systems of two degrees of freedom double pendulum oscillations about equilibrium.

Generalised co-ordinates.—Lagrange's equations with applications, Hamilton's principle and the principle of least action. Hamiltonian equations. Contact transformations. Solution of the canonical equations by means of the Hamilton-Jacobi partial differential equation.

(iii) *Elementary Vector Analysis.*

Vectors, addition, scalar and vector multiplication. Laws of commutation and distribution. Expression of vectors as sums of three vectors and products of such expressions. Differentiation of vectors. Gradient of a scalar field. Transformation of vector components. Tensors of second order. Vector fields. Divergence and curl. Gauss' and Stokes' Theorems. Tensor fields and vector divergence. (Standard as in Haas' Introduction to theoretical Physics).

C.—OPTIONAL GROUP.

(a) *Gravitation and Electrostatics.*

Gravitation.—Law of inverse square. Attraction and potential of simple bodies—spheres, rods, discs, cylinders etc. Potential at a distant point.

Electrostatics.—Coulomb's law. Fundamental physical conceptions, conductors, insulators, induction. Intensity of electric force at a point, lines and tubes of force. Potential. Gauss' Theorem. Laplace's and Poisson's equations. Spherical harmonics. Equipotentials and lines of force—general properties. Fields of force due to special distributions of point-charges. Doublets Potential and capacity of simple conductors and condensers. Conductors in given fields. Electric screening. System of conductors—energy and mechanical force. Dielectrics and inductive capacity. Applications of the method of images and inversion. Conjugate functions.

(b) *Statistics,—(including Probabilities and Errors of observation).*

Probabilities a priori:—

Mathematical definition, elementary theorems and examples. Addition and multiplication of probabilities, with examples. Binomial distribution and the most probable event. Mathematical expectation.

Aposteriori or inverse.—Bayes's Rule and its criticisms.

Theory of variables.

(i) *Symmetrical Frequency distribution.*

Errors, different kinds, nature of accidental errors, Gauss's Law of Error, its proof based on the nature of accidental error. Error curve,

The law of least squares and deduction of the principles of arithmetical mean. The median and the law of error based on the median. Application to one unknown, measure of precision, mean square error, probable error. Observations of different weights. Adjustment of indirect observations involving one unknown and more than one unknown. Normal equations; their formation and solution. Probable error of an observation of unit weight. Probable errors of unknown and determination of their weight. Adjustment of conditioned observations. Rejection of observations.

(ii) *Asymmetrical Frequency—Distribution.*

The median, mode, standard deviation. Method of moments to derive a formula to fit a particular statistical experience. Curve fitting (Pearson's curves). Skewness. Theory of Dispersion.

(iii) *Frequency—Distribution of two variables.*

Correlation and contingency tables and their representation by surfaces. Correlation, regression, correlation coefficient and correlation ratio.

(iv) *Frequency distribution of several variables—Partial correlation.*

Theory of sampling.—Normal correlation.

Theory of attributes—Classification, consistency, association, partial association.

General statistical methods with illustrations.

The Principles of Index—Number making and using.

(c) *Astronomy—General and Elementary Spherical.*

The celestial sphere, astronomical co-ordinates. The diurnal motion of the heavenly bodies and its explanation by rotation of the Earth. Arguments and proofs for the earth's rotation. Change of phenomena due to a change of the observer's place on the Earth. Form and size of the Earth. Simple problems connected with the diurnal motion solved by using spherical trigonometry.

The apparent motion of the Sun among stars. Variation in the length of the day at various places, Twilight. Explanation of the phenomena on the supposition of the annual motion of the Earth round the Sun and proofs for this hypothesis. The determination of the first point of Aries and the obliquity of the Ecliptic. The signs of the Zodiac. Effects of Precession and Nutation.

The Earth's orbit round the Sun. Kepler's laws and Newton's deductions therefrom. True anomaly, mean anomaly and the lengths of the different seasons.

Finding by observation the latitude and longitude of a place and the error of the clock. Different units of time and the conversion of one another. Sun dial, Equation of time. Different kinds of years. The Calendar.

Corrections of observations for astronomical refraction, parallax and aberration and the fundamental formulae embodying these corrections. Determination of parallax of heavenly bodies and their distances.

The Moon—Its orbit round the Earth and the Sun. Its rotation and vibrations. Synodic and Sidereal months. Eclipses and their causes. Ecliptic limits. Number of Eclipses in a year. The Saros.

Members of the solar system. Elements of a planet's orbit. Direct and retrograde motions of the planets. Phases of the planets. Transits of planets across the Sun. Comets and Meteors.

Principal constellation and stars. Double and multiple stars. Binary Stars. Nebulae.

The observatory. The principal instruments. The astronomical clock. Transit instrument. The transit Theodolite. Equatorial. Sextant. The principal errors of the Transit Instrument and their corrections.

(a) *Hydrostatics and Hydrodynamics.*

Hydrostatics.—Definitions of 'perfect fluid' and 'pressure' at a point in all directions, general conditions of equilibrium of a fluid and of a liquid in particular. Fluid at rest under the action of (1) gravity (2) central forces. Rotating liquid. Resulting thrusts of fluid on plane areas. Centre of pressure. Thrusts of liquid on curved surfaces. General condition of equilibrium of a floating body. Surfaces of buoyancy and flotation. Positions of equilibrium. Potential energy stored up by the immersion of a solid.

Stable and unstable equilibrium of a floating body. Metacentre, expression for metacentric height. Experimental determination of metacentric height, stability of equilibrium (1) of a hollow vessel containing a liquid floating in another liquid (2) of bodies floating under constraint (3) of bodies floating in heterogeneous liquid (simple cases only). Theory of stability based on the principle of energy.

Hydrodynamics.

General theory and Equations of Motion.—Motion of a fluid element. Operator D and expansion ϕ -Eulerian equations of motion, equation of continuity. Boundary conditions. Equations of impulsive motion. Integration of the equations of motion. Steady motion, rotating liquid, irrotational motion, velocity potential, pressure-equation, efflux of liquids. Lagrangian form of the equations of motion.

Theory of irrotational motion of a liquid.—Flow and circulation. Stokes' theorem. Constancy of circulation in a moving circuit, permanence of irrotational motion. Velocity potential, physical meaning, and general properties, Green's theorem expression for the Kinetic energy, case of infinite boundary. Cyclic and acyclic motion.

Problems in irrotational motion of a liquid.—Sources and sinks. Stream function. Conjugate functions. Method of images. Moving spheres and cylinders in liquid. Rotating cylinders. Initial motion of liquid contained between concentric spheres or coaxial cylinders. Stokes' stream function.

Waves.—Wave motion, progressive and stationary waves. Simple cases of irrotational wave motion in liquid under gravity, long waves surface waves.

(2) *Theory of Numbers.*

Unique factorization theorem; arithmetical functions; linear and quadratic congruencies; Pell's equation.

Elementary inequalities of the prime number theory; Dirichlet's theorem on the primes in an arithmetical progression (theory of characters and L-series).

Representation of a number as a sum of 2, 3 and 4 squares (Farey's series, Lagrange's theorem, Jacobi's theorem, on the number of representations of an integer as a sum of four squares).

The class-number of binary quadratic forms (finiteness of the class-number, calculation of the class-number).

The orders of the arithmetical functions $d(n)$, $\phi(n)$, $\omega(n)$.

Text-books:—

Landau, Vorlesungen über Zahlentheorie, Band I, Parts 1—4; Landau, Primzahlen (selected topics); Mathews, Theory of Numbers, Chapters 1—8; Dickson, Introduction to the Theory of Numbers.

TELUGU

OUTLINES OF THE HISTORY OF TELUGU LITERATURE.

N. B.—*The Syllabus is the same as that prescribed for B.A. (Pass) Group VI.*

History of Telugu Literature. (Special Part)

I. *Introductory.*

Definition of Literature—literature as reflection of a nation's life—
influence of political, religious, and social conditions on literature—the Andhra
people and their language.

II. *Pre-Nannaya Period.*

Literature in the making—paucity of literary documents—importance of inscriptions—beginning of the differentiation between Marga and Desi types, and their subsequent history.

III. *Age of Nannaya 1000—1250.*

Nannaya, the first great Telugu poet—the father of Telugu poetry—his contribution to Telugu literature—his method of translation—the characteristics of his style.

Other poets of the age:—Nanna Choda—Panditharadhya, Somanatha and Buddharaju compared as Dwipada writers—The place of Somanatha in the Dwipada Literature.

Buddharaju—authorship of Ranganatha Ramayanam compared with Valmiki.

Siva poets—their religious outlook as reflected in their literature.

IV. *Age of Thikkana 1250—1300.*

Thikkana—political, religious, and literary condition of the period—the many-sided genius of Thikkana—his genius for harmonising conflicting elements in religion and literature—his method of translation compared with that of Nannaya—characteristics of his style—his Nirvahanottara Ramayanam—how it shows the maturity of his artist genius—the influence of his Bharatam on subsequent Telugu literature—Thikkana as an epoch maker.

Other poets of the age:—Ketana, Marana, Manchana.

V. *Age of Yerrana 1300—1350.*

His claim to be regarded as the maker of an age—his contribution to Bharatam—comparison with Nannaya and Thikkana—the development of the Prabandha type.

Other poets: Bhaskara—authorship of Ramayana—comparison with Ranganatha Ramayanam—Nachana Somana—his poetry compared with that of Yerrana.

VI. *Age of Sreenadha 1350—1500.*

Age of Transition—some characteristics of the age—introduction of new elements into poetry—Sreenadha's methods of translation compared with those of his predecessors—his contribution to the growth of Prabandha—importance given by him to Sringara sara—the scholarly and the lay elements in his poetry—traditional account of his character—the evidence of his works—the influence of his life and character on his contemporaries and successors—authorship of Veedhi Natakam and the satirical element in it—his patriotism as seen in his ballads and other poems.

Pothana :—Authorship of **Bhagavatham**—**Pothana** compared with **Thikkana** on the one hand and **Sreenadha** on the other in regard to literary equipment, temperament, and outlook—his lyrical gift—the influence of his devotion on his poetry—the influence of his **Bhagavatham** compared with that of **Bharatham** in the moulding of the **Andhra** character.

Other Poets :—**Jakkana** and **Ananthamathya** compared—**Gaurana**—as a **Dwipada** writer—source of his **Harischandra**.

Pina Veerana—his **Sakuntala** and its sources—marks an advance in the evolution of the **Prabandha**.

Duggana, **Narayana Kavi**, **Vennalakanti Surana**, **Nandi Mallayya**, **Ghanta Singaya**.

VII. *Age of Krishnadevaraya 1500—1600.*

Political and social condition of the period—Greater **Andhra**—the dominating personality of **Krishnadevaraya**—authorship of **Amukta Malayada**—the golden age of **Prabandha**—characteristics of **Prabandha**.

Some great **Prabandha** poets :—**Peddana**, **Thimmana**, **Dhurjati**, **Surana**, **Murti**, **Ramakrishna**.

VIII. *Nayak Literature 1600—1775.*

Andhra conquest of **Tamil Nadu**—political, social and geographical conditions leading to freedom from the literary conventions of the **Andhra Desa** and the consequent growth of various types of literature, such as prose, song, **Yakshagana**—the emergence of women writers, a distinct characteristic—characteristics of the **Tanjore** and **Madura** schools.

Contemporary poets in the **Andhra Desa** : **Thimma Kavi** and others.

IX. *Age of Decadence 1775—1875.*

A century of darkness—causes of decadence—political and social condition—some bright stars like **Paparaju**.

X. *Modern age 1875.*

Signs of **Renaissance**—foreign influences—reaction of political and social conditions on literature—revolt against authority and convention—good and evil effects of the same—growth of new forms of literature like the novel, essay, short-story, lyric—**Veeresalingam**, the father of modern prose—age of experiment rather than of achievement.

Special Period :—Candidates are expected to be familiar with the books which fall within this period and to have first hand knowledge of the best portions of them, and to make a comparative study of the authors who have written on similar or same subjects, and to study the poets in relation to their times. A detailed study of the books is not expected.

Sanskrit and Prakrit

1. Prescribed Prose and Poetry.
2. Translation from Sanskrit into English—Inter, Part II standard.
3. Grammar.
 - (1) Classification of sounds.
 - (2) Sandhi.
 - (3) Declension and conjugation of substantives and roots of general occurrence.
Compounds of general use.
 - (5) Syntax—relating to nominal cases.
4. Prakrit : Chanda's Prakrit Grammar.

Principles of Literary Criticism.

1. Fine arts and their fundamental affinity with one another—Definition of poetry—its place in the fine arts—Function of poetry in human activity—Didacticism in poetry—Poetry and metre—Poetry compared with science (physical and metaphysical)—Equipment of the poet—emotion, imagination, sense of beauty, culture.
2. Rasa—its varieties—Rasa as a subjective reality.
3. Poetry—subjective and objective.
 - (a) Subjective poetry—love lyric—Nature poetry—Elegy—Devotional poetry—and patriotic poetry etc.
 - (b) Objective poetry sub-divided into Dramatic and Narrative.
Dramatic poetry: Comedy—Tragedy—Prakarana—Prahasana etc.
Narrative poetry: Purana—Ithihasa—Kavya—Ballad—Story.
4. Novel and Drama compared.
5. Study of the short story.
6. Criticism as an art and as an impetus to creation.
7. Biography and its place in criticism.

CHAPTER XLI.

B.COM. (PASS) DEGREE EXAMINATION.*(Regulations)*

1. Candidates for the Degree of Bachelor of Commerce shall be required— Conditions of admission.

- (i) to have passed the Intermediate Examination in Arts and Science of this University or the Intermediate Examination of any other statutory Indian University accepted as equivalent thereto,*
- (ii) to have undergone subsequently a further course of study in the University college or in any college affiliated to the University for B. Com. (Pass) as prescribed hereunder, extending over a period of two years, each consisting of three consecutive terms and
- (iii) to have passed the examination for the degree hereinafter prescribed.

2. The course for the B. Com. Degree shall comprise instruction in— Courses of Study.

Part I—(a) Commercial Correspondence and Precis-writing and (b) Translation (Hindi).

Part II (a) (1) General Commercial Knowledge and Commercial Arithmetic.

(2) Commercial Geography.

(3) Book-keeping and Accounts.

(4) Law and Practice of Banking in India.

Part II (b) (1) Business Organisation.

(2) Economics.

(3) Mercantile and Industrial Law.

*Vide foot-note on the first page of Chap. XXXIX

(4) One of the following Special subjects :—

Advanced Accounting and Auditing

or

Advanced Banking and Currency

or

Recent Economic History of England, Germany,
Russia, Italy, U. S. A., Japan each with
special reference to India and India.

3. The courses of study shall be as defined in the syllabuses.

Eligibility for
the Degree.

4. No candidate shall be eligible for the Degree of Bachelor of Commerce until he has passed the examination in Parts I, II-A and Part II-B.

5. A candidate for the B. Com. Degree Examination may present himself for Part I at the end of the first year of the course and thereafter at his option present himself for the whole of the examination, i. e. Part I, Part II-A. and Part II-B. or one or more of these, provided that candidates who obtain qualifying marks in any of the parts need appear again and pass only in the remaining part or parts in which they failed.

Subjects for the
Examination.

6. Candidates for the B. Com. Degree Examination shall be examined in—

Part I-(a) : There shall be a three hours' paper on Commercial Correspondence and Precise Writing. This paper shall include an essay on some general Commercial subjects.

Part I-(b) : There shall be a two and a half hours' paper on Translation from Hindi into English and *vice versa*. This paper on Translation shall include a simple essay (on commercial subject) also.

Part II : There shall be nine papers, each of three hours' duration, one on each of the seven general subjects (including the essay) and two on the special subject.

Graduates in Economics shall be exempted from attending the classes in Economics but shall be required to take the examination in that subject.

Candidates who have passed in Hindi under part II in the Intermediate examination shall not be required to undergo the course in Hindi prescribed for the examination or to pass in the examination under Part I-B.

7. A candidate shall be declared to have passed Part I of the examination if he obtains not less than 35 per cent of the total marks in each of the subjects. Marks qualifying for a pass.

A candidate shall be declared to have passed in Part II-A and Part II-B of the examination if he obtains not less than 35% of the total marks in the subjects comprising Part II-A and Part II-B respectively and not less than 30% in each of the subjects included therein.

There shall be separate lists of successful candidates in each part. Candidates obtaining not less than 50 per cent of the marks in each subject under part I shall be declared to have Passed in that subject with distinction.

8. Successful candidates in Part II shall be arranged in three classes—the *first* consisting of those who obtain not less than 60 per cent ranked in the order of proficiency as determined by the total marks obtained by each; the *second*, of those who obtain not less than 50 per cent ranked in the order of proficiency as determined by the total marks obtained by each, and the *third* of the remainder. Classification for successful Candidates.

Transitory Regulation.

For the benefit of candidates who failed in Part I-(a) English and Commercial Correspondence and Precis-writing at the B. Com. (Pass) Degree examination held in 1936 or earlier, an examination in Part I-(a) under the regulations in force up to and including the examination of 1936 will be held in March and September 1937 under the then time-tables. Similarly for the benefit of candidates who fail in Part II of the B Com. Pass Degree examinations in 1937 or earlier, an examination in that part under the regulations in force up to and including the examination of 1937 will be held in March and September 1938 under the old time tables. The text-books for Part I-(a) examination of 1937 and Part II examination of 1938 shall be the same as those prescribed for 1936 and 1937 examinations respectively.

SYLLABUSES.

Part II (a) General subjects.

1. *Economics*.—General 'principles of Economic Theory, particularly regarding Production, Consumption, Value, Distribution, Money and Banking and International Trade, with special reference to India.

Production.—What is production? Agents of production, viz., Land, Labour, Capital and Organisation. The laws of returns; the supply of Labour and theories of Population; the classification and functions of Capital; Business Organisation and forms of Industrial Organisation.

Consumption.—What is Consumption? Necessaries and luxuries, Wants, Utility and law of Diminishing utility, Demand and Elasticity of Demand, Law of Demand. Principle of substitution, Doctrine of maximum satisfaction and Consumer's surplus.

Value.—Fundamental ideas. How value is determined, Market value and normal value, Value and the Laws of return, theories of value, Joint and composite Demand. Joint and composite supply, Value under Monopoly, Speculation, Markets.

Distribution.—The nature of Distribution, Rent and Theories of Rent, interest and theories of interest, Wages and theories of Wages, and Profit and theories of Profit.

Money and Banking.—The nature and functions of money, The value of money, Quantity theory, Monetary standards. Credit and types of credit instruments, how credit is created, the role of Banking. Functions and principles of Commercial Banking. Importance of Bank Reserves, Clearing Houses, Central Banks and Note issue, Bank Rate and its influence on the Money Market, Bank of England, Imperial Bank of India and the Reserve Bank, and a study of the London Money Market and the Indian Money Market.

International Trade.—Theory of International Trade, Law of comparative costs, Gain from International Trade, Protection *versus* Free Trade. Elements of Foreign Exchange. Trade cycles and causes

thereof, theories of Trade cycle, World Trade Depression and remedies therefor, including Problems of stabilisation.

2. *Law and Practice of Banking.*—The legal relationship between banker and customer. Current accounts, Deposit accounts, Trust accounts, Loans, Overdrafts and cash credits. The Pass Book. Secrecy of the state of Customer's account. Cheques and documents analogous to cheques. Payment and collection of cheques. Payment of cheques by mistake. Forged cheques. Securities for advances in general. Pledges and mortgages of negotiable instruments, stocks and shares. Commercial credits. Realization of securities. Banker's guarantees. Miscellaneous securities, viz., Lands and Buildings, Life Policies, Book Debts and Ships. Subsidiary services of Banks and the Law relating thereto.

3. *Business Organisation*—*The nature and constitution of business houses.*—The sole Trader. Partnerships, Joint Stock Companies, Trusts, Cartels, Holding Companies, Municipal Organisations, Co-operative Institutions, Co-partnership, Profit-sharing, Nationalisation and Guild Socialism.

The financing of business.—Nature of saving, Investment, Fixed and working Capital, investment and the division of risk bearing. Types of investment, Competitive Demand for savings and function of the rate of interest; Financial institutions, their types, functions, and relation to other businesses. The promotion of companies and the raising of long-term capital. Relation of different classes of investors. Financial problems of depreciation and obsolescence—foreseen and unforeseen. Supply of short-term capital—Bank advances, Bills of Exchange and Documentary Credits.

Control of responsibility, Office Routine and Scientific Management.—Internal relation of staff inside the business firms, the machinery for taking decisions involving different views and interests and the recruitment, training, promotion and retirement of personnel. The organization for training Junior executives to become Managers and Administrators. The machinery of Co-operation of firms within groups, particularly that for enabling holding companies and their subsidiaries and other firms working together.

The external relation of firms and groups of firms with the outside world particularly trade associations, professional associations, scientific bodies, Government Departments and Governments.

Cost and marketing policy, Investment policy, the replacement, increase and withdrawal of Capital from fields of production in relation to costs and profits. Location, size and specialisation of plants determined by markets, raw materials, labour supply, transport etc. The location of branch factories and assembly plants and the allocation of space within a plant location. The purchase or lease of factory premises. Organization and policy in the carrying of stocks and work-in-progress. Buying, storing and issuing materials, and the timing of manufacturing processes. Organization and policy in determining manufacturing processes. Planning and routine. Price Policy. Forms of pricing including tendering, open prices, discrimination between market prices, adjustment to demand and supply fluctuations, the condition of contracts. Influence of types of business in price policy. Price changes and discounts. Selling policy, including forms of selling organizations and relation with competitors and consumers. Marketing problems of distributors. Wholesale businesses. Organized and unorganized wholesale markets. Speculation and trading in future. Hedging operations. Internal problems relating to departmental organization. Merchandise control, buying and selling control. Selection, training, payment and control of 'Sales force.' Sales method, sales planning and budgeting. Relation of the sales department with other departments. Retail business. Types of consumers' demand. Organization of retail distribution. Department stores. Speciality stores. Chain stores. Retail Co-operative Societies. Buying policies, stock control and selling policies. Co-operation between retailers. Instalment Trading and Hire purchase.

Methods of Remuneration.—Degree of specialisation and automatism in relation to labour supply. Wage systems. Industrial efficiency.

Skilful advertisement.—Functions of specialist advertising firms, different forms of advertising and relation to types of goods sold. Trade marks and Brands.

4. *Book-keeping and Accounts.*—Principles of Double entry. Keeping of subsidiary books, posting to ledger, preparing Trial

Balance, Trading and Profits and Loss accounts and Balance Sheets of sole traders, Partnerships and Joint Stock Companies. Bills of Exchange, Promissory Notes and Cheques. Accounts Current and Average Due Date. Depreciation, Reserves and Sinking Funds. Capital and Revenue, Receipts and payments and Income and Expenditure Accounts. Consignment Accounts. Joint ventures. Partnership accounts. Company accounts, including Reconstruction, Amalgamation and Absorption, Single Entry Book-keeping and conversion to Double Entry. Departmental and branch accounts. Hire purchase accounts, Royalty Accounts. Self-Balancing Ledgers.

5. *Mercantile and Industrial Law*.—Contracts (Sections 1 to 181 of the Contract Act), Agency, Sale of Goods, Partnership, Negotiable Instruments, Company Law, Societies Registration Act. Elements of law relating to Life Assurance and Provincial Insolvency. Elements of Industrial legislation, particularly regarding Factories, Workmen's compensation and Trade Unions.

6. *Commercial Geography*.—Physical Geography as the basis of various types of civilisation and a determining factor of natural and economic development. Chief commodities of Commerce—Agricultural and allied products, minerals and manufactures, conditions and regions of production, preparation for the market and chief processes. Trade routes by land and sea. Present-day production and foreign trade of India, Great Britain and the leading commercial and industrial countries of the World.

7. *General Commercial Knowledge and Commercial Arithmetic*.

(i) GENERAL COMMERCIAL KNOWLEDGE.

- (1) Office records including filing, indexing and the use of mechanical devices
- (2) Importing and Exporting.
- (3) Customs and excise.
- (4) Port Trust Authority.
- (5) Chambers of Commerce.
- (6) Board of Trade.
- (7) Elements of Insurance : Life, Fire and Marine
- (8) Advertising.

- (9) Goodwill.
- (10) Stock exchanges.
- (11) Elements of money, exchange and banking, with special reference to India.
- (12) Elements of public finance and taxation with special reference to India.

(ii) COMMERCIAL ARITHMETIC.

- (1) Short methods in addition, subtraction, multiplication and division.
- (2) Decimals, including approximation.
- (3) Decimalization and de-decimalization of money.
- (4) Calculation of prices : practice, simple and compound.
- (5) Ratio and proportion.
- (6) Averages and percentages including—commission, brokerage, premium, cash discount, calculation of selling prices, given cost price and percentage of gain on cost price.
- (7) Metric measures and decimal monetary systems.
- (8) Indian money—rapid calculations.
- (9) Square root and application of square root.
- (10) Simple interest including short methods—Banker's interest—Formulae.

Part II (b) Special subjects.

1. *Advanced Accounting and Auditing.*—(a) General Accounting as in Book-keeping and Accounts greater detail and accounts of different commercial undertakings and Public utility companies. Assurance Accounts. Bank Accounts, Bankruptcy Accounts. Outlines of Cost Accounts and Income-tax Accounts.

- (b) Continuous and completed audit, detection of frauds, technical errors, (viz., of omission; commission and principle), Internal check, vouching, verification and valuation of Assents, different classes of audit, forms of accounts and balance sheets, certification of balance

sheet, Auditor's reports and certificates. The appointment, duties, rights and liabilities of auditors, Investigations, certifying of average profits, etc. Legal decisions affecting Auditors, particularly regarding depreciation, profits available for dividend etc.

2. *Advanced Banking and Currency*—(i) *Banking*.—(a) General principles, cheque system, Development of Deposit Banking, Clearing Houses. Banking Investments. Short loan Fund. Regulation of Note issue. Reserves and Discount Rates. Central Banking. Financial and Commercial crises. Modern Developments.

A short account of different kinds of Banks in Great Britain, France, Germany, U.S.A. and Japan.

(b) History and organization of Banking in India. The Imperial Bank, its constitution and relations with the Government and the other banks. The Exchange Banks and their place in the Indian credit system. Joint Stock Banks. Indigenous bankers, shroffs, Mahajans, etc., and their place in the Money Market. Recent conditions. The Reserve Bank and its functions.

The co-operative credit movement in India, Provincial and District Banks, Unions and Credit societies and Land Mortgage Banks.

A short account of different kinds of Banks existing in India, viz., Savings Banks, Industrial Banks, Labour Banks, etc.

(c) Comparison between the systems of Banking in India and the leading countries of the world.

(ii) *Currency*.—(a) General principles and economic significance of Money. Money and its functions. Qualities of good money, Origin and Principles of Metallic currencies and Coinage. Mint Regulations and Coinage Laws in England, France, Germany, Japan, U.S.A. and India. Currency Deterioration, causes thereof and remedies therefor. Gresham's Law. Principles of Token coinage. Legal Tender and various systems thereof prevailing in the leading countries of the world. Monetary Standards, Paper Money, Decimal Coinage, Tabular Standards. The purchasing power of money and the Quantity Theory. Price variations and effect thereof. Inflation, deflation and reflation. The problem of stabilization of prices,

Monetary Reform. The Gold Standard, its break down and its future. Various proposals for an international monetary standard. The world crisis, its explanation and remedies therefor.

(b) *Indian Currency Problems.*—Early history of demonetisation of gold. Fall in the value of Silver. Herschell Committee and closing of the Mints to Coinage of Silver on private account. Fowler Committee and its recommendations. India and the Gold Mint. The Gold Standard Reserve, its composition and location. Chamberlain Commission and its recommendations. Currency during the war and after. Babington-Smith Committee and its Report. Failure of the attempt to value the Rupee at 2 sh. Hilton-Young Committee and Gold Bullion Standard. Note-issue of the Presidency Banks. History of currency notes till 1914. Effects of war on the Note-issue. Changes proposed by the Babington-Smith Committee. Proposal to transfer Note-issue to a new institution. The Reserve Bank and its role in Currency.

(c) *Foreign Exchange.*—What is Foreign Exchange? Importance of Foreign Exchange in modern economic development. Mint Par of Exchange Gold Points. Fluctuations in Exchanges, causes and effects thereof. Rates of exchange—Long and short rates and Sight rates. Silver and Paper exchanges. The purchasing power Parity Theory. Forward Exchange, Problem of stabilisation of Exchanges. Terminology of Exchanges and how to read a Foreign exchange article. Indian Exchanges, Pre-war and Post-war. Present conditions.

CHAPTER XLII.

B. COM. (HONOURS) DEGREE EXAMINATION*(Regulations)*

I. Candidates for the Degree of Bachelor of Commerce (Honours) shall be required— Conditions of admission,

- (i) to have passed the Intermediate examination in Arts and Science of this University or the Intermediate examination of any other statutory Indian University accepted as equivalent thereto."

Note:—Admissions to Honours course shall ordinarily be restricted to those candidates who have taken one or more Commercial subjects as optionals under Part III in their Intermediate examination.

- (ii) to have subsequently undergone a further course of study in the University College, as prescribed hereunder extending over a period of three years, each consisting of three consecutive terms; and
- (iii) to have passed the examination for the degree hereinafter prescribed.

2. The course for the B. Com. (Honours) Degree shall comprise instruction in— Courses of study.

Part I— Examination—(a) Commercial correspondence and precis writing and (b) Translation (Hindi).

Part II— Final Examination.

- A. 1. Commercial Knowledge and Commercial Arithmetic.
2. Commercial Geography.
3. Business Organisation.
4. Law and Practice of Banking in India.

**Vide* foot-note on the first page of Chapter XXXIX.

- B. 1. Economics.
 2. Book-keeping and Accounts.
 3. Mercantile and Industrial law.
 4. Statistical method and Applied Statistics.
 5. & 6. Any two of the following special subjects one from each group.—

Group (a)

1. Advanced Accounting and Auditing.
 2. Advanced Banking and Currency.

Group (b)

1. Economics of Transport.
 2. Actuarial Science.
 3. International Trade and Foreign Exchanges.
 4. World Trade and Organisation of Markets.
 5. Insurance.
 6. Recent Economic History of England, Germany, Russia, Italy, U. S. A., Japan (each with special reference to India.) and India

**Eligibility for
the Degree**

3. (a) No candidate shall be eligible for the B. Com. Honours Degree until he has passed both the Part I and Part II Examinations.

(b) No candidate other than those hereinafter exempted, shall be admitted to the Part II examination in Honours unless he has passed the Part I examination.

4. The examination in Part I shall be the same as the examination in Part I—for the B. Com. Pass Degree examination.

A candidate for the Honours examination may present himself for the Part I examination at the end of the first year of the course and thereafter at his option present himself for either Commercial Correspondence and Precis Writing or Translation or both, provided that candidates who obtain qualifying marks for a pass either in Commercial Correspondence and Precis Writing or Translation need appear again in the subject in which they failed.

A candidate shall be declared to have passed in Part I if he obtains not less than 40 per cent in each of the subjects. All other candidates shall be deemed to have failed in the examination. Successful candidates obtaining not less than 60 per cent of marks in each subject shall be declared to have passed with distinction in that subject. **Marks qualifying for a pass.**

5. Selected graduates of the University (B. Com. Pass degree holders and B. A. Pass degree holders with Economics (main) as their optionals) and such other graduates as may be recognised by the Syndicate as equivalent thereto may be allowed to take the Honours Degree examination after a further period of study in the University college extending over not less than two years. B. Com. Pass Graduates shall be exempted from passing the Part I examination; they shall be required to attend the classes and appear and pass the Part II examination in the subjects under General and Special groups. **Exemption.**

Candidates who have passed Hindi under Part II in the Intermediate examination shall not be required to undergo the course in Hindi prescribed for the examination or to pass in the examination under Part I-B.

6. The Part II examination shall be conducted in two parts, Part II-A and Part II-B respectively; the subjects included in the above shall correspond to the subjects under the corresponding parts mentioned in Section 2 above. **Subjects for the Examination.**

The papers set in each subject shall be as follows :—

Each of the Special subjects—3 papers of 3 hours' duration each;

Rest—one paper of 3 hours' duration each.

Candidates for the Honours examination are expected to have more detailed knowledge of the common subjects than is required in the case of candidates for the Pass degree; a higher standard than B. Com. Pass course is required in passing the Examination.

7. Candidates may be permitted to appear for Part II-A at the end of the 2nd year of their Honours course. A candidate for the B. Com. Honours degree examination shall appear for the Part II-B examination not later than the end of the 4th year after **Admission to Part II examination**

commencing the Honours degree course in the University College; provided, however, graduates (*Vide* Section 5 above) proceeding to the B. Com. Honours Degree shall appear not later than 3 years after commencing the B. Com Honours degree course in the University College.

Notice of
withdrawal.

8. No candidate shall be permitted to undergo the examination in Part II-B for the Honours more than once. A candidate for the Part II-B examination shall, however, be permitted to withdraw from the examination provided he has not sat for the last paper in the examination and provided he has given notice of withdrawal to the Registrar within three clear days from the date of the last paper which he answered. He shall be permitted to appear again for the Part II-B examination in the following year without producing any additional certificate of attendance.

9. In the event of a candidate for the B. Com. (Honours) degree failing to satisfy the examiners in the Part II examination, he may be recommended by them for the B. Com. Pass degree provided he has obtained not less than 30 per cent of the marks in each of the divisions in Part II.

10. A candidate who is not already eligible for the B. Com. Pass degree and has failed completely in the B. Com. (Hons.) degree examination shall be permitted to appear for the B. Com. (Pass) degree examination without the production of a further certificate of attendance in the University College.

Marks qualify-
ing for a pass.

11. A candidate shall be declared to have passed the Final examination if he has obtained the following minimum marks:—

Part II-A 30 per cent in each subject and 40 per cent in the aggregate.

Part II-B 33 per cent in both the special subjects taken together; 30 per cent in each of the remaining subjects; and 40 per cent in the aggregate.

Classification
of successful
candidates.

12. Candidates obtaining Honours shall be ranked in the order of proficiency as determined by the total marks obtained by each and shall be arranged in three classes; the *first*, consisting of those who obtain not less than 60 per cent; the *second*, of those who obtain not less than 50 per cent; and the *third*, of those who obtain not less than 40 per cent of the total marks.

Transitory Regulation.

For the benefit of candidates who failed in Part I-(a) English at the B. Com. (Hons.), Degree examination held in 1936 or earlier an examination in Part I-(a) under the regulations in force up to and including the examination of 1936 will be held in March and September 1937 under the then time-tables. Similarly for the benefit of candidates who fail in Part II of the B. Com. (Hons.) examination in 1938 who are eligible to appear another time, the B. Com. (Hons.) examination in Part II under the regulations in force up to and including the examination of 1938 will be held in March—April of 1939 under the old time-tables. The text-books and syllabuses for Part I-(a) examination of 1937 and Part II examination of 1939 shall be the same as those prescribed for the examinations of 1936 and 1938 respectively.

SYLLABUSES.*Part II—General Group.*

1. *Economics*.—Same as for B. Com. (Pass) degree, but in greater detail plus Outlines of Public Finance and Taxation, Problems of Labour and Capital and Co-operation, with special reference to India.
2. *Law and Practice of Banking in India*.—Same as for B. Com. (Pass) degree plus Important legal decisions affecting Bankers.
3. *Business Organization*.—Same as for B. Com. (Pass) degree plus Export and Import Trade Organization and outlines of Transport.
4. *Book-keeping and Accounts*.—Same as for B. Com. (Pass) degree plus Accounts of different commercial undertakings and Public utility companies. Assurance Accounts, Bank Accounts, Bankruptcy Accounts, Outlines of Costs Accounts and Income-tax Accounts.
5. *Mercantile and Industrial Law*.—Same as for B. Com. (Pass) degree plus Rights and Duties of Liquidators, Trustees and Receivers. Law of Arbitration and Award. Trade Disputes Employers' liability.
6. *Commercial Geography*.—Same as for B. Com. (Pass) degree plus Regional and commercial Geography of India, Great Britain, France, Germany, Italy, Russia, U.S.A. and Japan.
7. *General Commercial Knowledge and Commercial Arithmetic*.

(i) GENERAL COMMERCIAL KNOWLEDGE.

Same as in the Pass course in greater detail plus criticism of a Company Prospectus. The Co-operative movement in India and outlines of the Indian Constitution including the recent developments regarding Federation.

(ii) COMMERCIAL ARITHMETIC.

Same as in the Pass course in greater detail plus the following:—

- (1) Mental calculation of prices including short methods.
- (2) Mensuration of rectangles, parallelogram, circle and rectangular solids.
- (3) Duodecimals.
- (4) Builders' quantities and estimates.
- (5) Business forms, such as invoices, debit and credit notes, account sales and statements of account.
- (8) *Statistical Method and Applied Statistics.*—Definition of statistics, collection, tabulation and presentation of data, graphs, averages, dispersion, skewness, correlation and index numbers. A brief study of British Indian statistics—official and non-official. Application of statistics to economic and commercial problems.

Part II—Special Group.

Sub-Group—A.

(1) *Advanced Accounting and Auditing.*—(a) General Accounting as in Book-keeping and Accounts. Columnar Book-keeping, Fire, Loss of Profits and Compensation Claims, Accounts of Professional Practices, Hotel accounts, Investment accounts. Cost accounts in greater detail, and Income-tax accounts, including law and procedure of Income-tax.

(b) *Auditing.*—Same as for B. Com. (Pass) Degree plus Audit Programme, Share Transfer Audit, Miscellaneous Problems, Foreign Branches, Maintenance Contracts, Hire Purchase, Shares as consideration for sale, Vendor's guarantees, "Family" companies, valuation of shares in private companies and underwriting agreements.

Investigation into and criticism of accounts, including—

- (i) Classes of investigations, liability of the investigating accounts, investigation beyond the books, Examination of accounts with particular reference to Stock and Foreign investigations.
- (ii) Criticism of a balance sheet for prospective loan creditor or purchaser. Criticism of prospectus certificate. Special points regarding purchase of a business valuation of good-will,

(2) *Advanced Banking and Currency*—(i) *Banking*.—Same as for B. Com. (Pass) in greater detail plus Outlines of practice of several kinds of banks in Great Britain, France, Germany, U.S.A. and Japan.

(ii) *Currency*.—Same as for B. Com. (Pass) in greater detail plus the various currency theories and their criticism.

(iii) *Foreign Exchange*.—Same as for B. Com. (Pass) in greater detail plus Arithmetic of Foreign Exchanges.

Sub-Group—B.

(1) *Economics of Transport*.—(a) General principles relating to Railway, Road, Inland Waterway, Sea and Aerial Transport. The place of Transport in Industry and Commercies. General organization of each means showing distribution of functions. Control exercised by the State at inauguration and over construction, operation and charges. Monopoly and Competition. Co-ordination of Transport. Relations with public.

Railway Transport.—Capital and Expenditure. Gross and Net receipts. Economics of Railway construction and maintenance. Growth of passenger traffic. Passenger fares. Influence on distribution of population. Freight rates and their theory. Rate making in practice. Influence of production costs on rates. Classification of goods. Special rates. Discrimination. Control of rates by maxima, by commissions of tribunals. Competition. Traffic pools. Effects on rates and fares of State ownership and State guarantees of interest. Influence of railway rates on distribution of industries.

Road Transport.—Economics of road construction and maintenance. Theories of rates and fares. Variations caused by types of road transport. Competition with railway transport, relation of road to railway transport. Municipal ownership. State control.

Inland Water Transport.—Capital Expenditure. State aid. Tolls. Rates. Economics of Haulage. Local nature of influence on industry.

Sea Transport.—Docks and Quays. Co-ordination of rail and water terminal facilities. Port dues. The ship economics of marine fuel. Charter party. Bill of lading. Sea worthiness. Freight on liners and tramps. Agreements to control competition. Navigation Laws and State regulation. Freight making in coastwise transport. Marine Insurance. Average salvage. The ship canal.

Aerial Transport.—Growth and development. Principles of ratemaking.

(b) Rights and Duties of common carriers and their customers.

CHAPTER XLIII.

DEGREE OF BACHELOR OF SCIENCE*(Regulations)***Conditions
of Admission.**

1. Candidates for the Degree of Bachelor of Science shall be required

- (1) to have passed the Intermediate examination in Arts and Science of this University or an examination of some other University accepted as equivalent thereto
- (2) to have undergone subsequently a further course of study in an affiliated college as proscribed hereunder, extending over a period of two years, each consisting of three terms ordinarily consecutive; and
- (3) to have passed thereafter the examination for the Degree hereinafter proscribed.

**Courses of
study.**

2. The courses for the B.Sc. Degree shall comprise instruction in—

Part I—English;

Part II—*Three* of the following branches of knowledge, of which one shall be the main subject (Part II-A) and the other two subsidiary (Part II-B)—

- i. Mathematics
- ii. Physics
- iii. Chemistry
- iv. Botany
- v. Zoology
- vi. Geology
- vii. Physiology

The course of study shall be as defined in the syllabuses.

**Eligibility for
the Degree.**

3. No candidate shall be eligible for the Degree of Bachelor of Science until he has passed the examination in Part I—English and in Part II viz., three of the optional branches of knowledge contained in the courses of study.

* *Vide* foot-note on the first page of Chapter XXXIX.

4. A candidate for the B.Sc. Degree Examination may present himself for Part I at the end of the first year of the course and thereafter at his option present himself for the whole of the examination (that is, Parts I and II), or for either part, or for Part II-A or Part II-B, or Part I together with either Part II-A or Part II-B; provided that candidates who obtain qualifying marks for a pass in either Part II-A or Part II-B need appear again only for the sub-division A or B in which they failed;

Provided also that candidates presenting themselves for any part of the examination at the end of the first year of the course shall take the examination with the text-books and syllabuses prescribed for that year no matter when they would be completing their course in the main subject.

5. Notwithstanding anything contained in section 4, candidates who have passed in one subsidiary subject under Part II-B at the examination of 1931 shall be given credit for the pass in that subject and they need appear for and pass in the other subsidiary subject only to complete that part. It shall also be permissible for candidates who commenced their B.Sc. Degree course of instruction in July 1931 to appear at the examination of April 1932 for one subsidiary subject under Part II-B and candidates who pass in that subsidiary subject in that year shall be given credit of the pass in that subject and they need appear for and pass the other subject only to complete that part.

6. Candidates for the B.Sc. Degree examination shall be examined in

Subjects for
Examination.

Part I—English.

There shall be one paper in English of three hours' duration based on two prescribed text-books, one for detailed study and the other for non-detailed study.

Part II—Any three of the subjects mentioned under Part II in Section 2 above, of which one shall be main and the other two subsidiary.

The scope of the papers in the several subjects whether main or subsidiary shall be as stated below. Each paper shall carry 100

marks and shall be of three hours' duration **except** where otherwise stated.

MATHEMATICS (MAIN)

Six papers—

- i. Algebra and Trigonometry.
- ii. Pure Geometry.
- iii. Analytical Geometry.
- iv. Calculus.
- v. Statics and Dynamics.
- vi. Hydrostatics and Astronomy.

MATHEMATICS (SUBSIDIARY)

Two papers—

- i. Algebra, Trigonometry and Analytical Geometry.
- ii. Calculus and Differential Equations.

PHYSICS (MAIN)

Four papers in theory and two practical examinations—

- i. Dynamics and Hydrostatics.
- ii. Properties of Matter and Heat.
- iii. Light and Sound.
- iv. Electricity and Magnetism.

PHYSICS (SUBSIDIARY)

One paper in theory and one practical examination.

CHEMISTRY (MAIN)

Four papers in theory and two practical examinations as hereunder:—

- i. General Chemistry including History of Chemistry.
- ii. Inorganic Chemistry.
- iii. Physical Chemistry.
- iv. Organic Chemistry.

The practical examinations shall be of six hours' duration each.

CHEMISTRY (SUBSIDIARY)

One paper in theory and one practical examination.

BOTANY, ZOOLOGY OR GEOLOGY (MAIN)

Three papers in theory and three practical examinations as follows :—

Botany :

- i. Cryptogams.
- ii. External Morphology. Gymnosperms, and Angiosperms.
- iii. Physiology and Histology.

Zoology :

- i. Invertebrata.
- ii. Vertebrata.
- iii. Vertebrata and general principles.

Geology :

- i. Physical Geology and Economic Geology.
- ii. Crystallography, Mineralogy, and Petrology.
- iii. Stratigraphy, Indian Geology and Palaeontology

Practical under Geology.

- i. Crystallography and Mineralogy.
- ii. Petrology and Blow-Pipe analysis.
- iii. Structural Geology and Palaeontology.
Laboratory and Field Note-Books specimens.

BOTANY, ZOOLOGY OR GEOLOGY—(SUBSIDIARY)

Botany : No division of Papers.

Zoology : i Invertebrata.
ii. Vertebrata.

Geology :

- i. Physical, Structural and Stratigraphical Geology and Palaeontology.
- ii. Crystallography, Mineralogy and Petrology.

Practical under Geology:

- i. One on the above subjects.

Two papers in theory each of 2½ hours' duration and one practical examination of three hours.

PHYSIOLOGY (MAIN)

Two papers in theory and three practical examinations.

PHYSIOLOGY (SUBSIDIARY)

One paper in theory and two practical examinations.

**Exemptions to I
M.B.B.S.
candidates
offering Physio-
logy Main.**

7. A candidate who has passed the First M.B.B.S. Degree Examination of this University will be permitted to appear for the B.Sc. Degree Examination in Physiology as a main subject after he puts in a regular course of study in that subject for a period of one year in a college affiliated to the University for the purpose. The Syndicate shall have power to exempt him from taking any subsidiary subjects. He shall be required to appear for and pass Part I—English of the B.Sc. Degree Examination but the Syndicate shall have power to exempt him from the production of the required certificate of attendance in that subject at an affiliated college. The result of the candidate at the examination shall be determined by the marks he obtains in Part I—English and Part II—Physiology as a main subject without reference to the subsidiary subjects.

**Marks qualify-
ing for a pass.**

8. A candidate shall be declared to have passed Part I of the examination if he obtains not less than 35 per cent of the marks in that Part.

A candidate shall be declared to have passed Part II of the Examination if he obtains, (a) in the main subject, not less than 35 per cent of the total marks and not less than 30 per cent in each division of the examination, and (b) in the subsidiary subjects, not less than 35 per cent of the total marks of the two subsidiary subjects and not less than 30 per cent, in each of the subsidiary subjects. All other candidates shall be deemed to have failed in the examination. The divisions in the following subjects when main shall be—

- (i) *Mathematics.*

(a) Pure Mathematics, (b) Applied Mathematics.

- (ii) *Physics*, (iii) *Chemistry*, (iv) *Botany*, (v) *Zoology*
(vi) *Geology*, or (vii) *Physiology*.

- (a) The written examination in the main subjects.
(b) The practical examination in the main subjects.

There shall be no divisions in the above subjects taken as subsidiary.

9. There shall be separate lists of successful candidates in each part. Candidates obtaining not less than 60 per cent of the marks in Part I shall be declared to have passed with distinction in English.

10. Successful candidates in Part II shall be arranged in three classes—The *first*, consisting of those who obtain not less than 60 per cent ranked in the order of proficiency as determined by the total marks obtained by each; the *second* of those who obtain not less than 50 per cent ranked in the order of proficiency as determined by the total marks obtained by each and the *third*, of the remainder, provided that first class and second class shall be given only to those candidates who pass Part II-A and Part II-B at one and the same examination.

List of successful
Candidates.

Classification of
successful candi-
dates. -

11. Candidates who have already passed the B.A. degree examination with *Physics*, *Chemistry* or *Botany* as the main subject shall be eligible to appear for the B.Sc. degree examination subject to the condition that they shall have undergone subsequently a further course of study in an affiliated college extending over a period of one year consisting of three terms ordinarily consecutive in a subsidiary subject other than the one already taken for the B.A. degree examination.

Admission of
B. As. to
appear for B. Sc.
Examination.

Such candidates shall be examined in—

- i. the main subject which shall be the same as that taken for the B.A. degree examination, and
- ii. the new subsidiary subject.

They shall be exempt from sitting for an examination in Part I—English and in the subsidiary subject presented for the B.A. Degree examination.

Classification of successful candidates shall be done as per 2 of section 10 above, subject to the condition that the candidates shall have the benefit of the marks obtained in the subsidiary subject of the B.A. degree examination in determining their class.

SYLLABUSES.

Mathematics (Main).

The course will comprise Algebra, Plane Trigonometry, Geometry, Elements of the Calculus, Dynamics, Hydrostatics and Astronomy, the standard being that of B. A. (Group I) in such items of the syllabus as are common.

PURE MATHEMATICS.

Algebra.

Direct problems on the notion of algebraic inequality. The theorem on the Arithmetic and Geometric means and the allied results in maxima and minima.

The definition of a limit and deduction of the theorems on the limit of the sum, product and quotient of two functions. The limit of $\frac{x^n - a^n}{x - a}$ as x tends to a . Definition of a continuous function. Continuity of polynomials.

Definition of convergence. Absolute and conditional convergence. Statement (with graphical illustration) that a monotonic sequence tends to a limit or to infinity. Tests for series of positive terms by (1) Comparison of series, (2) discussion of series $\sum \frac{1}{n^p}$ (3) finding the limit of $\frac{U_n + 1}{U_n}$.

Test for the convergence of an alternating series.

The Binomial theorem for a rational index and the Exponential theorem (proved by assuming the theorem on the multiplication of two absolutely convergent series). * Series for $\log_e (1+x)$.

Partial fractions.

Evaluation of (1) $\sum U_n$ and $\sum \frac{1}{U_n}$

Where $U_n = \left\{ a + \frac{b}{(n+1)} \right\} \left\{ a + \frac{b}{(n+2)} \dots \frac{b}{(a+n-r)} \right\}$

(2) $\sum \frac{a(a+x) \dots (a+n-1x)}{b(b+x) \dots (b+n-1x)}$

(3) $\sum f(n) r^{n-1}$ where $f(n)$ is a rational integral function of n .

* More stress is to be laid on applications than on formal proofs.

Elementary properties of simple continued fractions (excluding recurring continued fractions). (Integral solutions of equations of the first degree. The theorems on the interchange of columns and rows, simplification, development and multiplication of determinants (proved for determinants of the third order). Elements of the theory of numbers. Fermat's and Wilson's theorems.

Typical graphs : $y = ax^n$, $y = \frac{a}{x}$, $y = ax + b + \frac{c}{x}$, $y = ax + b + \frac{c}{x^2}$

The equation of the n th degree. Statement of the theorem that an equation of the n th degree has n roots real or complex. Relations between its roots and co-efficients. Simple transformations of equations. Reciprocal equations. Sum of integral powers of the roots of an equation. Occurrence of imaginary roots in pairs. Descartes' rule of signs. Change of sign of a polynomial as an indication of a Zero. The least number of the real roots of an equation. The derived function. Multiple roots. Rolle's theorem for a polynomial. Horner's method for the numerical solution of an equation. Graphical solution of Cubic and biquadratic equations.

TRIGONOMETRY

Fuller treatment of the Intermediate course. Quadrilaterals inscribed in and circumscribed about circles. Regular polygons. Limits of $\frac{\sin x}{x}$ and $\frac{\tan x}{x}$ as x extends to Zero. Inverse trigonometric functions. Complex numbers and their geometric representation. (Argand's diagram). De Moivre's theorem and its application to (1) expand $\cos nx$, $\sin nx$ in powers of $\cos x$ and $\sin x$. (2) expand $\cos nx$, $\sin nx$ in terms of Cosines and Sines of multiples of x . (3) factorise $x^{2n} \pm 1$, $x^{2n} - 2x^n \cos n\phi + 1$ De Moivre's and Cote's properties of the circle. * Series for $\cos x$, $\sin x$, $\tan^{-1} x$ in terms of x .

Summation of elementary trigonometric series; Splitting the general term (simple cases). Series of Sines and Cosines of angles in A. P. Series whose summation by the use of De Moivre's theorem ultimately depends on geometric or binomial series.

Elementary transcendental functions of a complex variable; Exp. Z defined by series. The addition theorem. Periodicity of Exp. Z Hyperbolic functions, Log Z and its multiple-valuedness.

Definition of $\sin Z$, $\cos Z$, $\tan Z$ and deduction of the ordinary properties of circular function. Separation of the above functions into real and imaginary parts.

* More stress is to be laid on applications than on formal proofs.

GEOMETRY.

N. B.—Questions in Geometry may be answered by methods of pure Geometry or Analytical Geometry.

Pure Geometry.

Coaxal circles. Circles orthogonal to a coaxal system. Limiting points inverse to every circle. Common tangent to two circles subtends a right angle at a limiting point.

Cross-ratios. The different cross-ratios of a range of four points. The cross-ratio of a pencil: coplanar homographic ranges and pencils. Homographic axis. The harmonic property of the circle and complete quadrilateral and quadrangle. Orthogonal projection. Projections of parallel straight lines. Their ratio. Perpendicular lines which project into perpendicular lines. The area of the projection of a closed figure. Projection of a circle. The theorem on the projection of an ellipse into a circle.

Inversion. The inverse of a straight line and a circle. The intersection of the inverse of coplanar curves. The distance between the inverses of two given points. The inverses of a circle and a pair of points inverse to it. The inverse of a coaxal system. Proof by inversion of Feuerbach's theorem.

Reciprocation. Polar reciprocal of a circle with respect to a circle. The theorem on the reciprocation of a non-intersecting system of coaxal circles into confocal conics. Solid Geometry.

Geometrical conics. Such leading properties of conic sections as are specially suitable for treatment by elementary geometry.

Focus directrix definition of the conic. Shape axes of symmetry, centre, foci. The ellipse as orthogonal projection of a circle.

The following propositions and their immediate application:—

(i) If a chord PQ of a conic whose focus is S meets the corresponding directrix in R, SR is a bisector of angle PSQ.

(ii) The tangents from any point to a conic subtend equal or supplementary angles at a focus. Also the two tangents are equally inclined to the focal lines through the point.

(iii) The semi-latus-rectum is a harmonic mean between the segments of a focal chord.

(iv) The locus of midpoints of parallel chords of a conic is a diameter.

(v) The ratio of the rectangles under segments of two intersecting chords of a conic in two fixed directions is independent of the position of the chords.

(vi) The Sub-tangent of a parabola is bisected at the vertex; the sub-normal is constant,

(vii) The foot of the perpendicular from the focus on any tangent to parabola lies on the tangent at the vertex.

(viii) The focal chord of a parabola parallel to the tangent at P is $\frac{1}{2}$ SP.

(ix) $PV^2 = 4 SK \cdot KV$ where PV, is an ordinate to the diameter of the parabola through K.

(x) The sum or difference of the focal distances of any point on a central conic is constant.

(xi) the tangent and normal at P are bisectors of angle SPS in the case of a central conic and of the angle between SP and the parallel to the axis through P in the case of a parabola.

(xii) The feet of the perpendiculars from the foci on any tangent to a central conic lie on the auxiliary circle and the rectangle under these perpendiculars is constant.

(xiii) The sum of the squares of conjugate diameters of an ellipse is constant.

(xiv) The locus of the meets of perpendicular tangents to a conic is a circle which reduces to a straight line when the conic is a parabola.

(xv) Any tangent to a hyperbola forms with the asymptotes a triangle of constant area.

(xvi) The portion of any tangent to a hyperbola intercepted between the asymptotes is bisected at the point of contact.

(xvii) Every plane section of a right circular cone or cylinder is a conic.

Analytical Geometry.

Of two demensions.—Fuller treatment of the straight line and circle referred to rectangular axes, The parabola, ellipse and hyperbola referred to their principal axes and the rectangular hyperbola referred to its asymptotes. Tracing of conics from the general equation of the second degree. The polar equations of the straight line, circle and the conic. Simple problems on the above.

Of three dimensions.—(referred to rectangular axes)—*The plane and the line.* Their equations. Distance of a point from a plane and a line. Planes bisecting angles between two given planes. Intersection of a plane and a line. Conditions that two lines be coplanar.

The shortest distance between two given straight lines.

The Sphere. Its equation. Tangent plane. Radical plane of two spheres. *The Ellipsoid referred to its principal axes.* Its equation. Tangent plane. Normal polar plane and polar lines. Equation of the plane of section with a given centre. Enveloping Cone and Cylinder. Conjugate diameters and diametrical planes.

Calculus.

Standard forms and fundamental processes of differentiation and integration. Simple applications of the derivative to geometry and mechanics. Successive differentiation. Leibnitz theorem. Maxima and minima values of a function of one variable. Rolle's theorem (without proof). Theorem of mean value. Taylor's and Maclaurin's theorems (without proof). Evaluation of the undetermined form.

Partial differentiation. Total derivative and its application to the differentiation of implicit functions. Total differential as the sum of partial differentials. Approximations and small errors. Transformation

of $\frac{\partial^2 \mu}{\partial x^2} + \frac{\partial^2 \mu}{\partial y^2}$ into polars.

A knowledge of the shape of the following curves is required.

Cartesian: The Catenary, the Cycloid and the Cardoid.

Polar: $r = a \sin n\phi$. The limacon and the lemniscate of Bernoulli.

Curvature. Cartesian formula for the radius of curvature.

Integration by substitution. Integration by parts. Integration regarded as summation with simple applications to areas, volumes, and surfaces and to mechanics.

Differential equations of the first order (and first degree of the types

Variables Separable.

Homogeneous equations.

Linear equations.

Exact equations.

Discovery of integrating factors with functions of one variable only.

Solution of the equation.

$$\frac{d^2y}{dx^2} + a \frac{dy}{dx} + by = V.$$

where a and b are constants and V is a sum of functions of the type $\exp. nx$, $\sin nx$, $\cos nx$ and polynomials in x .

APPLIED MATHEMATICS.

Statics and Dynamics.

Resolution and composition of displacements, velocities and accelerations.

Rectilinear motion of a particle under constant acceleration.

Motion of a projectile under gravity range on a plane through the point of projection. Parabolic path and its construction for a given velocity of projection.

Circular motion : Normal acceleration. The conical pendulum.

Simple harmonic motion. Composition of simple harmonic motions of the same period.

Angular velocity, angular acceleration, moment of velocity.

Absolute units of force. Resolution and composition of forces. Dimensions of dynamical units.

Angular momentum. Moments of inertia in simple cases. The pendulum. Determination of g . Work, Energy, Simple applications of the principles of energy and of linear and angular Momentum.

Impact of a smooth sphere on a fixed smooth plane and impact of two smooth balls. Loss of Kinetic energy. The theory of the ballistic pendulum.

Rectilinear motion in a resisting medium. The damped oscillation. Motion under constant force, the law of resistance being linear or quadratic, Central forces (Elementary course).

Constancy of areal velocity. Motion under (1) the law of direct distance (2) the law of gravitation. The velocity in the orbit. Kepler's Laws and the law of gravitation.

Conditions of equilibrium of a body acted on by *forces in one plane*. Moments and couples. Centre of mass of a tetrahedron and cone of arc and sector of a circle and of the volume and surface of a zone of a sphere. Stability of equilibrium when surfaces in contact are spherical. Simple machines. Friction: its laws. Equilibrium on a rough inclined plane, and the manner of its disturbance (toppling or sliding),

Easy problems in Graphical statics involving the method of Force and Link polygons.

The common Catenary.

Hydrostatics.

Thrust of fluid on plane and curved surfaces. Centre of pressure of a circle and of a parallelogram and a triangle with a side horizontal.

Floating bodies. Conditions of equilibrium, Stability in the case of spherical-bottomed bodies.

Problems on Boyle's law.

Determination of heights by barometer. Pumps.

Astronomy.

The apparent motion of the heavens, Circumpolar stars. The principal constellations and the most conspicuous stars. (Diagrams not required).

The celestial sphere. Points and lines on it, Horizon, zenith, pole meridian etc. The equinoctial points etc.

Celestial co-ordinates. Right ascension and declination. Latitude and longitude. Altitude and azimuth. Hour angle and declination.

The theory of the transit circle, the equatorial, transit theodolite and the Sextant. Collimation, level and deviation errors of the transit circle and their correction.

The use of the astronomical clock and chronometer. Determination, by observation, of clock error and rate and of right ascension and declination.

Phenomena depending on change of latitude and longitude of the observer, Magnitude of the Earth.

The apparent annual motion of the Sun. The constellations of the Zodiac. The ecliptic and its obliquity. The equinoxes and the solstices. The earth's motion round the sun, Seasons.

Sidereal time, apparent solar time, mean solar time. Equation of time.

Conversion of time. The use of the Nautical Almanac.

Standard time (India). The Calendar.

Explanation of astronomical refraction and parallax. The tangent formula for refraction. Twilight.

Determination of the latitude of a station by meridian observations and of longitude by chronometer. Sumner's method.

The solar system. Planetary motions (taking coplanar circular orbits) synodic and sidereal periods. Rough comparison of orbital dimensions, Stationary positions and periods of retrogression.

Kepler's laws.

Comets and meteors.

The motion of the Moon and her phases. The plan of her orbit. The Nodes and their motion. The Moon's sidereal and synodic periods. Her rotation, Librations, diameter and distance.

Distances of planets from the sun by observation of a superior planet at opposition.

Causes of eclipses of Sun and Moon. Ecliptic limits. Number of eclipses in a year. Elementary problems on diurnal motion. (Use of the sine and cosine formulæ for right angled spherical triangles).

Determination of the first point of Aries (Flamsted's method) and of the obliquity of the ecliptic. General description of the phenomena of Precession and Nutation.

Aberration: Annual aberration. Earth's way an apex. Correction for the position of a star. Representation on the celestial sphere. The relation between the coefficient of aberration, velocity of light and solar parallax.

Mathematics (Subsidiary)

ALGEBRA AND TRIGONOMETRY.

Determinants.—The theorems of the interchange of columns and rows, simplification, multiplication theorems (proved for determinants of the third order). Use in the solution of linear equations.

Convergency and Divergency of Infinite series.—Definition, Absolute and conditional convergence, tests for series of positive terms by (1) comparison

of series, (2) discussion of the series $\sum \frac{1}{n^k}$ (3) finding the limit of u_n $\left| \begin{matrix} u \\ n-1 \end{matrix} \right.$ Test for the convergence of an alternating series.

The Exponential theorem.—(Proved by assuming the theorem on the multiplication of two absolutely convergent series).

The Logarithmic series.—(More stress is to be laid on applications than on formal proof).

Partial Fractions.—

Complex numbers and their geometric representation. (Argand Diagram).

De Moivre's theorem: and its application to

- (1) Expand $\cos n x$, $\sin n x$ in powers of $\cos x$ and $\sin x$.
- (2) Expand $\cos^n x$ $\sin^n x$ in terms of cosines and sines of multiples of x .
- (3) Solution of $x^n = y$ where n is a +ve integer and x and y are complex numbers.

CO-ORDINATE GEOMETRY.

Fuller treatment than in the Intermediate course.

Straight line and circle.—Orthogonal circles, length of the tangent from a point to a circle, radical axis, coaxal circles.

Parabola.—Equation with respect to axis and tangent at vertex. Transference of origin keeping axes parallel. Equations of tangent and normal. Parametric equation of chord and tangent. (Propositions and problems relating to the three normals to a parabola from a point are not required).

Ellipse.—Equation with respect to principal axes. Transference of origin, keeping axes parallel. Equations of tangent and normal. Parametric equations. Conjugate diameters. Geometrical properties of an ellipse. (Propositions and problems relating to the four normals to an ellipse from a point are not required).

Hyperbola.—Equation with respect to principal axes. Transference of origin, keeping axes parallel. Equations of tangent and normal. Conjugate diameters. Asymptotes. Geometrical properties of a hyperbola.

Rectangular Hyperbola.—Equation with respect to asymptotes. Transference of origin, keeping axes parallel. Equations of tangent and normal. Parametric equations. Geometrical properties.

Pole and Polar.—Poles and polars with respect to circles and conics.

Polar Co-ordinates.—Change from Cartesian to Polar-co-ordinates; equation of a conic in the simplest form, with a focus as the pole (riders or general formula, not expected).

The standard in plane co-ordinate Geometry is lower than that of B.A. (Pass) Mathematics Main. The standard is that of Fine and Thompson's Co-ordinate Geometry.

CALCULUS AND DIFFERENTIAL EQUATIONS.

Differentiation of rational integral functions. Differentiation of sums, products, quotients, direct and inverse trigonometric functions, and functions of a function. Differentiation of e^x and $\log x$ Application of the derivative to geometry and mechanics. Successive differentiation. Leibniz theorem. Maxima and Minima values of a function of one variable. Taylor's and Maclaurin's theorems (without proof). Evaluation of the undetermined form $\frac{0}{0}$.

Partial differentiation. Total derivative and its application to the differentiation of the implicit functions. Total differential as the sum of partial differentials. Approximations and small errors. Definition of hyperbolic functions.

Integration by substitution. Integration by parts. Definite integral regarded as the limit of a sum. Simple applications to area, volume and surface and to mechanics.

Differential equations of the first order and first degree of the following types:

1. Variables separable.
2. Homogeneous equations.
3. Linear equations.
4. Exact equations.

Solution of the linear differential equation.

$$\frac{d^2y}{dx^2} + a\frac{dy}{dx} + by = V.$$

Where a and b are constants and V is a sum of functions of the type $\sin nx$ and $\cos nx$ and e^{nx} .

Book of reference:

G. A. Gibson—Elements of the Calculus.

Physics (Main)

The course includes a more extended study of matter included in the Intermediate Course with special emphasis on the experimental, modern and applied aspects of the subject, on the lines indicated below:—

Dynamics as in Branch (i)—Mathematics.

Properties of matter.—Kinetic theory of matter, Brownian motion, Atomic structure; Balance; Circular motion, Centrifugal force and its practical applications. Centrifugal machines. The Compound pendulum. Determination of 'g' and its variation, the elastic oscillations of springs. Time, mean, solar and sidereal; Sun-dial, clocks, watches and chronometers; simple transit instrument, time signals. Elasticity. Hook's Law, Compressibility and rigidity of solids. The elastic limits. Strains due to simple longitudinal pull and bending. Young's modulus and its expression in terms of k and n . I—form girders. Twisting of wires, torsional rigidity, Torsion balance and shafts.

Gravitation.

Gases.—Boyle's Law. Variations, Vander Waal's equation, elementary kinetic theory, pressure, viscosity, effusion, transpiration and diffusion. Atmospheric pressure variation with altitude, Isobars and meteorological elements; The Monsoons. Cyclones and Anti-cyclones;—Western disturbances. Production and measurements of high and low pressures. Vacuum pumps and gauges.

Hydrostatics.—Thrust of fluids on plane and curved surfaces. Centre of pressure in simple cases. Floating bodies and conditions of stability

Hydrostatics machines. Capillary phenomena, surface tension and viscous flow of liquids. Vapour pressure over curved surfaces and formation of liquids. Diffusion, Analogy with condition of heat, Fick's Law; Osmosis.

Heat.—Thermometry. Expansion of solids. Applications to temperature compensation. Expansion of liquids, apparent and absolute. Expansion of gases and gas thermometry. Calorimetry. Specific heats of solids, liquids and gases. Determination of γ (gamma). Isothermals and Adiabatics.

Change of state, refrigeration. Continuity of state, critical constants, and liquefaction of gases.

Vapour pressure.

Thermo-dynamics, the two laws and their applications.

Practical heat engines of the steam, gas and oil type. Variations of freezing and boiling points, with pressure. Thermo-dynamic scale of temperature.

Joule—Thomson effect. Conception of Entropy.

Conduction, convection and radiation.

Laws of cooling, theory of exchanges, Searle's Lees and Forbe's methods of determining K; solar constant and the effective temperature of the Sun.

Light.—Velocity of light. Illumination, Photometry.

Elements of geometrical optics.

Achromatism, dispersion.

Thick lenses and revolving table, eye pieces, optical instruments; intermittent illumination. The wave theory, Huygens' principle reflection and refraction; action of mirrors, lenses and prisms. Simple interference phenomena, Rayleigh's interferometer; simple diffraction phenomena, Plane gratings, wave length determination; spectrum analysis; Doppler's principle; Double refraction and polarisation of light, polarimetry and interference of polarised light, Rings and brushes in uniaxial crystals.

Magnetism.—Forces on a magnet in a magnetic field. Determination of axis and moment of a magnet. Magnetic potential and equipotential surfaces. Interaction of two short magnets, determination of field strength. Magnetic shell and its potential energy in a magnetic field. Total normal induction and Gauss's theorem. Number of lines of force. Magnetic induction. Molecular theory of Magnetism. The magnetic field of the earth; the terrestrial magnetic elements and their variations. The mariner's compass and its corrections.

Electricity.—Electrostatic potential and capacity; Dielectric constant; Gauss's theorem, electrical forces, Mechanical forces on charged conductors, Energy of electrified systems; The dielectric and displacement currents; Electrometers. Determination of electrostatic capacity; electrostatic machines.

Wheatstone's bridge, specific resistance, resistance thermometry. Conductivity of electrolytes, electrolytic dissociation; Electro-plating accumulators, standard cells; the potentiometer; Thermo-electricity and pyrometry; application of thermodynamics and thermo-electric diagrams.

Electro-magnetic induction, Lenz's Law. Coefficients of induction, induction coils. Energy of circuit carrying current when placed in magnetic field; Mechanical forces on conductors carrying current. Moving coil instruments; Ballistic Galvanometer, Volt-meters and Ammeters.

D. C. Dynamos and Motors.

Technical applications of electricity to lighting, power transmission, telegraphy, telephony etc. The discharge of a condenser, Electric waves, The crystal detector, The thermionic valve, Simple wireless telegraphy; Elementary. X-ray and radioactive phenomena.

Sound.—The transmission of energy through material media by wave motion. Speed of propagation of waves, Nature of musical sound. Pitch, musical scales. Reflection and refraction of sound. Influence of wave length; The vibration of strings and gas columns. Resonance; Interference and diffraction phenomena; Analysis of sound; Measurement of wave length, Velocity and pitch. The Microphone, telephone, loud speaker and gramophone; Musical Instruments.

Practical Examination.—The practical examination will be held in parts and extends over three hours each, not on the same day.

Candidates must submit to the examiners before the hour of the first examination their laboratory note-books duly certified by their professors as a *bona fide* record of work done by them.

Physics (Subsidiary).

Properties of Matter.—As for candidates taking Physics as the main subject with the exception of the following.—

The Compound Pendulum, variation of 'g', the elastic oscillations of springs, the expression of Young's modulus in terms of k and n ; I—form girders torsional balance and shafts, Isobars and meteorological elements, The Monsoons. Cyclones and Anti-Cyclones, western disturbances.

Hydrostatics.—Hydrostatic Machines, Capillary phenomena, Surface tension and viscous flow of liquids. Diffusion: analogy with conduction of heat; osmosis.

Heat.—As for candidates taking Physics as the main subject with the exception of the following:—

Conception of Entropy, Lees and Forbes' methods of determining K: solar constant and effective temperature of the Sun.

Light.—As for candidates taking Physics as the main subject with following exceptions:—

Elements of geometrical optics; Thick lenses and revolving table; eye-pieces; intermittent illumination; Rayleigh's interferometer, Doppler's principle, interference of polarised light, rings and brushes in uniaxial crystals.

Magnetism.—Magnetic Induction. Weber's theory of magnetism. The magnetic field of the earth, the terrestrial magnetic elements and their variations; the Mariner's Compass.

Electricity.—As for candidates taking Physics as the main subject with the exception of the following:—Static Electricity.

Applications of thermodynamics to thermo-electricity and thermo-electric diagrams.

Co-efficients of induction, Energy of a circuit carrying current when placed in a magnetic field, Ballistic galvanometers.

The discharge of a Condenser etc.....to the end of the syllabus in Electricity.

Candidates shall submit to the Examiners before the hour of the practical examination their laboratory note-books duly certified by their Professors as a *bona fide* record of work done by them.

Chemistry (Main).

Physical Chemistry.

Only elementary treatment is expected.

The atomic concept of matter:—Laws of chemical combination; the law of conservation of matter; Avogadro's hypothesis; Dulong and Petit's law; isomorphism; Prout's hypothesis; the periodic classification and its defects; atomic number; isotopes; electron; valence and electron arrangement.

Energy in chemical system:—The definition of energy; force; the unit of energy; dyne and atmospheric pressure; the law of conservation of energy; the heat content of a system; the heat capacity of a system; heat of chemical reaction; heat of reaction at constant pressure and constant volume; Hess's law of constant heat summation; heat of formation; heat of combustion; heat of solution; heat of dilution; heat of neutrali-

sation ; heat of ionisation ; calorimetric methods ; variation of heat of reaction with temperature.

The state of aggregation:—The fundamental gas law : kinetic theory of gases ; Dalton's law of gas mixtures ; specific heats of gases ; heat capacity of gases at constant pressure ; thermal conductivity of gases : expansion of gases ; Joule—Thomson effect ; deviation from the ideal gas law ; Vanderwaal's equation ; energy changes accompanying expansion and compression of gases ; Critical temperature ; critical pressure ; critical volume ; isothermal P. V. curves : Vanderwaal's equation and P. V. isothermals ; the law of corresponding state ; vapour pressure ; Ramsay and Young's rule ; vapour pressure and external pressure ; surface tension ; molecular association ; viscosity of liquids ; crystal form ; classification of crystals, crystal structure ; elementary notation regarding X-rays and crystal structure : liquid crystals ; melting point of a solid.

Relation between chemical constitution and physical properties :—Relation of chemical constitution with atomic and molecular volume, specific refraction, rotation of the plane of polarisation, emission and absorption spectra.

Velocity and mechanism of gaseous reactions.—Homogeneous and heterogeneous reactions ; the mass law ; monomolecular and bimolecular reactions ; the time of half change ; the influence of temperature on the velocity of reaction ; opposing reactions ; consecutive reactions ; concurrent reactions ; the order of a reaction ; heterogeneous reactions involving gases ; catalysis.

The direction of chemical change:—The state of equilibrium ; the ideal chemical equilibrium ; spontaneous process ; reversibility and irreversibility ; maximum work ; cyclic processes and Gibbs Helmholtz equation ; the nature of the free energy change ; the sign of the free energy change ; free energy and equilibrium.

Solution:—Gaseous solution ; composition of solutions ; ideal solutions ; vapour pressure lowering ; the raising of the boiling point ; the lowering of the freezing point ; steam distillation ; osmotic pressure and its experimental determination ; the determination of molecular weight in solution ; thermo-dynamic consideration of the laws of dilute solution ; relation between osmotic pressure and vapour pressure lowering of solution ; Raoult's equation for vapour pressure lowering ; relation between osmotic pressure and boiling point elevation ; osmotic pressure and freezing point lowering ; mechanism of osmotic pressure.

Homogeneous and heterogeneous equilibria—Chemical equilibrium from the stand-point of kinetics ; chemical equilibrium from the stand

point of thermo-dynamics; relationship between K_p and K_c ; the formation of equilibrium conditions with temperature, pressure and concentration; Le-chatelier-Braun principle; effect of pressure upon chemical equilibrium; reactions without change in the number of molecules; the water gas equilibrium; reactions in which the number of molecules changes; dissociation of carbon-dioxide and water vapour; dissociation of nitrogen tetroxide; phase rule; phases; components; degrees of freedom; system of one and two components.

Electric conductance and ionisation:—Classes of conductors; uni-polar conduction; theory of metallic conduction; effect of temperature on resistance of metals; laws of electrolysis; electrolysis of fused salts; theory of electrolytic dissociation; specific, equivalent and molecular conductance; experimental determination of electric conductivity; equivalent conductance at infinite dilution; migration of ions and transport number; determination of transport number; indicators, hydrogen ion concentration (PH value).

Ionic Equilibria:—Law of mass action and ionic equilibrium; range of applicability of mass action law; ionisation and chemical constitution; isohydric solution; ionisation of water; inversion of cane-sugar hydrolysis of esters; solubility product; amphoteric electrolytes.

Photo-Chemistry:—Photo-chemical absorption law; Beer's law; actinometry; law of photo-chemical equivalence.

Colloid state:—Formation of colloid particles; method of obtaining colloidal solutions; sols and gels; kinetic theory and colloid particle; osmotic pressure of colloidal solution; diffusion of colloid particles; properties of the colloid system; absorption; absorption of gases by solids; absorption from solution; absorption and surface tension; electro endosmosis and cataphoresis; coagulation.

GENERAL AND INORGANIC CHEMISTRY.

Historical development:—The prehistoric period; the period of alchemy; period of iatro chemistry; period of sceptical chemistry; phlogiston period; quantitative period.

Hydrogen:—Laboratory and industrial methods of preparation; technical application of hydrogen; properties; hydrides; place of hydrogen in the periodic classification.

Oxygen:—Laboratory and industrial methods of preparation, properties; theory of rusting of iron; oxides; oxidation; reduction; oxidising and reducing agents; autoxidation.

Ozone:—Preparation, properties and constitution.

Water :—Hydrates; phase rule; composition of water (volumetric and gravimetric); hard and soft water.

Hydrogen peroxide :—Preparation, properties and characteristic reactions; composition and constitution; thermo-chemical consideration; peroxides; per-acids; per-salts.

Halogens :—A comparative study—preparation and properties of fluorine, hydrofluoric acid and fluorides; laboratory and technical methods of preparing chlorine and hydrochloric acid; period of induction; chlorides; Werner's co-ordination theory; oxides, oxyacids and oxysalts of chlorine; preparation and properties of bromine, hydrobromic and bromic acids; iodine, hydriodic, iodic, and per-iodic acids, iodate and periodates.

Sulphur :—Extraction and properties; allotropy of sulphur; triplepoint; consideration of phases; transition point; hydrides of sulphur; sulphides and per sulphides; halogen compounds of sulphur; oxides and oxyacids of sulphur; sulphurous, sulphuric per and thio sulphuric acids and their salts; constitution of sulphuric and sulphurous acids; thionyl chloride; sulphuryl chloride; thionic acids and their salts.

The gases of the atmosphere.

Nitrogen :—Allotropy preparation and properties; hydrides—ammonia, hydrazine and hydrazoic acid; oxides and oxyacids; fixation of nitrogen; hydroxylamine and hyponitrous acid.

Phosphorus :—Preparation and properties; allotropy; phosphine and phosphonium compounds; halides; oxides and oxyacids of phosphorus.

Arsenic, Antimony and Bismuth :—Their more important compounds and reactions; a comparative study of elements of the fifth group.

Carbon :—Allotropic forms; oxides and oxyacids; water gas reactions; photo-synthesis.

Silicon :—Hydrides, halides; oxides; silicic acid and silicates; ceramic and glass industries.

Boron :—Boric acid and borates: borax and its industrial uses.

The following metals studied in detail with particular reference to their metallurgy and their more important compounds and with special reference to their industrial modes of preparation and technical applications. Alloys.

Sodium, potassium, ammonium, copper, silver, gold, magnesium, barium, strontium, calcium, zinc, cadmium, mercury, radium, aluminium, tin, lead, chromium, manganese, iron, nickel, cobalt and platinum.

ORGANIC CHEMISTRY.

Purification and analysis of organic compounds; empirical, molecular and constitutional formulæ; isomerism.

Hydro carbons of Methane, Ethylene and Acetylene series and their derivatives; Alcohols; Ethers; Aldehydes and ketones; Alkyl esters of inorganic acids; fatty acids and their derivatives; esters; Glycerol; nitro-glycerine; Allyl alcohol; Acrolein; fats; soaps.

Aliphatic amines; cyanogen compounds; organo-metallic compounds of zinc and magnesium; urea; urethanes; glycols; dibasic acids and their derivatives.

The hydroxy mono and poly basic acids and their derivatives; stereo-isomerism; unsaturated acids; ketonic acids and esters; β diketone; amino acids; mono-saccharides and disaccharides; starch; cellulose; nitro-cellulose; Glucosides.

Phenols, aromatic Alcohols, Aldehydes, Ketones, Acids and their derivatives; constitution of Benzene; aromatic halogen, nitro and sulpho derivatives; reduction products of nitro bodies; Diazo compounds and their transformations; Azo compounds and Azo-dyes; Hydrazines.

Phenols, aromatic Alcohols, Aldehydes, Ketones, Acids and their derivatives; Quinones; aromatic Hydroxy Aldehydes and Acids.

Diphenyl; Diphenyl methane; Triphenyl methane; Malachite green; Rosanilines; Aurines; Phthaleins and Indigo.

Naphthalene, Anthracene and their important derivatives and reactions; Alizarine.

Pyridine; Quinoline; Iso Quinoline; Nicotine and Quinine.

Simple proteins:—

Practical Examination in Chemistry shall include the following:—

1. Qualitative analysis of inorganic mixture containing not more than four radicles (acids or bases).

2. Volumetric analysis.—Preparation of standard solutions; Acidimetry; Alkalimetry; Oxidation and Reduction methods involving the use of potassium permanganate; potassium dichromate; Idometry; precipitation methods.

3. Gravimetric analysis of aluminium, iron, calcium, magnesium, copper, silver, lead, zinc, manganese, sulphuric, hydrochloric, phosphoric and carbonic acids, silver coin, gravimetric separation of copper from zinc, gravimetric separation of iron from manganese,

4. Preparation of some common inorganic substances so as to ensure the candidates' acquaintance with ordinary chemical operations.

5. Physico chemical determinations of boiling point, melting point, molecular weight by vapour density, cryoscopic and ebullioscopic methods, transition point, hydrolysis of an ester and partition co-efficient.

6. Identification by physical and chemical tests of the following organic compounds given singly :—

Methyl alcohol; Ethyl alcohol; acetone; chloroform; formic, acetic, oxalic, tartaric, citric, acids; glycerine; urea; glucose; cane-sugar; starch, benzene; aniline; phenol; resorcinol; pyrogallol; benzal-dehyde; benzoic, salicylic acids; alpha-naphthol; beta-naphthol.

7. Preparation of the specimens of any six of the following organic compounds :—

Ethyl acetate; chloroform; ether; acetic anhydride; nitro-benzene; aniline; phenol,

Benzoic acid from toluene; chloro-benzene (by Sandmeyer's reactions).

At the practical examination candidates must submit to the examiner or examiners their laboratory note-books duly certified by their professors or lecturers as a *bona fide* record of work done by the candidates.

Candidates shall be permitted to consult text-books on practical chemistry during the period of their practical examinations in chemistry (main).

Chemistry (Subsidiary)

General Theoretical Chemistry and Physical Chemistry—Methods of determining Equivalent, Atomic and Molecular weights; Theory of Electrolytic Dissociation; Law of Mass Action; Valency, Kinetic Theory; Osmotic pressure; Colloids; Mono-molecular reactions; Elements of thermo-chemistry.

The elements (excluding the rare metals) and their important compounds studied in detail.

Chemistry of carbon compounds from an elementary stand point.

Purification and analysis of organic compounds. Constitutional formulæ. Isomerism. Preparation and properties of the following substances :—

Methane, Ethane, Ethylene, Acetylene, Methyl and Ethyl Alcohols, Formaldehyde, Acetaldehyde, Ether, Acetone, Formic and Acetic acids, Ethyl Acetate. Oxalic and Tartaric acids.

Urea, Glucose, Cane sugar, Starch, Coal-tar and its fractionation products, Benzene, Nitro-benzene, Aniline, Phenol, Benzoic acid.

Practical examination in Chemistry (subsidiary) shall include the following:—

- (i) Qualitative analysis of inorganic substances containing not more than two radicals (acids or bases)
- (ii) Volumetric analysis—Preparation of standard solutions. Acidimetry; Alkalimetry; Oxidation and Reduction methods involving the use of Potassium Permanganate, Potassium dichromate Iodine and Sodium Thio-sulphate.

At the practical examination candidates must, if required, submit to the examiner or examiners their laboratory note-books duly certified by their professors or lecturers as a *bona fide* record of work done by the candidates.

Botany (Main).

1. The main points of structure, life-history, development and taxonomic relationship of the following groups in general and the Genera in particular,

Myxomycetes.

Bacteria.

Cyanophyceæ: Oscillaria Nostoc, Rivularia and Scytonema.

Diatomacæ.

Chlorophyceæ: Chlamydomonas, Pandorina, Eudorina, Volvox. Ulothrix, Oedogonium, Ulva, Enteromorpha, Coleochaete, Protococcus, Scenedesmus, Hydrodictyon, Cladophora, Vaucheria, Bryopsis, Caulerpa, Botrydium, Spirogyra, Zygnema, and Desmids.

Characeæ. Chara, Nitella.

Phaeophyceæ: Ectocarpus, Fucus, Sargassum, Dictyota.

Rhodophyceæ: Liagora (Nemalionanceæ), Batrachospermum, Polysiphonia, Gracilloria, Corallina.

Fungi.

Phycomycetes: Phytophthora, Mucor or Rhizopus, Pilobolus. Saprolegnia Cystopus.

Ascomycetes: Saccharomyces, Eurotium, Pencillium, Erysiphe, Pexiza, Xylaria.

Basidiomycetes: Ustilago, Puccinia, Agaricus, Lycoperdon, Polyporus, Phallus.

Lichens.

Bryophytes ; Riccia, Marchantia Anthoceros, Funaria, Polytrichum.
Pteridophytes : Lycopodium, Selaginella, Isoetes, Equisetum, Ophioglossum, Gleichenia, Osmunda, Angiopteris, Trichomanes, Pleopeltis, Adiantum, Marsilia.

Gymnosperms ; Pinus, Cycas.

2. The morphology and development of the reproductive organs of Angiosperms.

3. The external morphology of Angiosperms, the general principles of classification and the distinguishing characteristics of the following families as used in the Flora of British India—

Magnoliaceae, Anonaceae, Nymphaeaceae, Cruciferae, Capparidae, Malvaceae, Sterculiaceae, Tiliaceae, Geraniaceae, Rutaceae, Meliaceae, Rhamnae, Sapindaceae, Anacardiaceae, Leguminosae, Rosaceae, Combrretaceae, Myrtaceae, Lythraceae, Cucurbitaceae, Umbelliferae, Rubiaceae, Compositae, Sapotaceae, Oleaceae, Apocynaceae, Asclepiadaceae, Boraginaceae, Convolvulaceae, Solanaceae, Scrophularinaceae, Acanthaceae, Verbenaceae, Labiateae, Amarantaceae, Loranthaceae, Euphorbiaceae, Urticaceae, Hydracharidæ, Orchidæ, Scitamineæ, Amaryllidæ, Liliaceae, Commelinaceae, Palmæ, Aroidae, Cyperaceae, Graminae.

4. Physiology :

The chemical composition of the plant ; materials of plant food and their sources ; the nature of soil and importance of its constituents and micro-organisms ; movements of water and gases ; assimilation of carbon and nitrogen ; transpiration and translocation of the assimilated products ; parasitism and other modes of nutrition ; metabolism ; respiration ; the influence of light, heat and gravity ; growth ; movements and irritability in plants ; sexual reproduction and its significance ; vegetative reproduction ; the phenomena of cross-fertilisation ; variation, heredity and mendelism ; theories of evolution and origin of species.

5. Histology :

The structure and modes of division of the cell ; the nature of cell contents, the nature and mode of origin of plastids ; cell-sap and other cell contents ; the physical and chemical properties of protoplasm and cell wall ; the origin, nature and development of plant tissues, primary and secondary tissues and their distribution in the plant body.

6. Ecology :

Structural adaptations to environment ; plant communities.

7, Practical work:

Candidates are expected to be able to make preparations illustrating the form and structure of any plant of the groups mentioned in the syllabus and describe them with sketches sufficient for the identification: to make dissections with the simple microscope of the floral of phanerogams, to make drawings, to construct floral diagrams and refer them to their families; to describe in technical language plants belonging to any of the groups in the syllabus and to set up and explain simple experiments in plant physiology.

At the practical examination, each candidate must submit his laboratory note-book, a collection of named plants collected and preserved by himself and a record of field work showing a thorough acquaintance with the local flora.

Botany (Subsidiary).

1. Structure and life-history of the following:—

Bacteria, Oscillaria, Chlamydo monas, Pandorina, Eudorina, Volvox, Ulothrix, Oedogonium, Spirogyra, Eetocarpus, Polysiphonia, Chara or Nitella, Rhizopus or Mucor, Peziza, Puccinia, Agaricus, Marchantia, Mosses, Selaginella, Pleopeltis or Adiantum, Marsilia, Cycas, Pine.

2. External Morphology of Flowering plants.

3. The general principles of classification and the characteristics of the following families,—

Anonaceae, Nyctagynaceae, Cruciferae, Nymphaeaceae, Rutaceae, Rhamnaceae, Leguminosae, Myrtaceae, Cucurbitaceae, Umbelliferae, Rubiaceae, Compositae, Apocynaceae, Asclepiadaceae, Convolvulaceae, Solanaceae, Acanthaceae, Verbenaceae, Labiales, Amarantaceae, Euphorbiaceae, Urticaceae, Hydrocharitaceae, Orchidaceae, Scitamineae, Amaryllidaceae, Palmae and Graminae.

4. Plant Physiology.—

Chemical composition of the plant; soil and its properties; photosynthesis; transpiration; respiration; metabolism; heterotrophic plants; growth; movements; irritability; reaction to external stimuli; adaptations; reproduction, sexual and asexual; cross and self-pollination and fertilisation; variation, heredity and Mendelism; theories of evolution and origin of species.

5. Histology.—

Cell structure and cell division: plastids, cell sap and other cell contents, the origin, nature and development of plant tissues; primary and secondary tissues and their distribution in the plant body: the relation of structure to function.

6. Practical work—

Candidates are expected to be able to make preparations illustrating the form and structures of any plant belonging to the groups mentioned in the syllabus and to describe with sketches sufficient for their identification; to make dissections with simple microscope of the floral parts of Phanerogams; to make drawings, construct floral diagrams and refer them to their families; to describe in technical language plants belonging to any of the groups specified in the syllabus.

Candidates shall submit to the examiners before the hour of the practical examination, their laboratory note books duly certified by their professors as a *bona fide* record of work done by them.

Zoology (Main)

The scope of zoology. The leading features in the structure, the important points concerning the development, and affinities and general classification of the forms included in the following groups:—

Protozoa, Porifera, Coelenterata, Platyhelminia, Nemertini, Nematoda, Acanthocephala, Chaetognatha, Rotifera, Brachiopoda, Annelida, Phoronidea, Polyzoa, Arthropoda, Mollusca, Echinodermata and Chordata.

A comparative study of the Physiological activities of the animals such as locomotion, feeding, respiration, excretion and reproduction of the groups mentioned above.

A general acquaintance with the Vertebrate Fauna of South India.

The geographical and geological distribution of the Chordata treated in an elementary manner.

Outlines of the theories of Organic evolution, Heredity and Adaptation.

An elementary knowledge of the Cell and Cell-phenomena.

Practical work:—Candidates will be required to examine, describe, identify or otherwise deal with specimens and preparations illustrating points of zoological interest in connection with any of the preceding groups. They will, in addition, be expected to have a full practical knowledge of the structure and will be required to make dissections and simple microscopical preparations of any of the following types:—

Amoeba, Vorticella, Hydra, Obelia, Jelly-fish (*Chrysora Rhizostoma*), Sea-anemone, Neries, or Eunice, Earthworm, Leech, Prawn and Crab (external characters), Scorpion, Centipede (external characters), Cock-croach, Fresh-water Mussel, Ampullaria, Sepia, Amphxus, (preparations and sections.) Dog-fish, frog, Pigeon and Rabbit.

Candidates may also be examined by *viva voce* questions.

Candidates shall submit to the examiners before the hour of the practical examination, their laboratory note-books duly certified by their professors as a *bona-fide* record of work done by them.

Zoology (Subsidiary)

The scope of zoology. The leading features in the structure the most important points concerning the development and affinities of the forms included in the following Phyla in general, and of the following types in particular. (Students will not be expected to be familiar with characters of orders or other sub-groups not mentioned in the following scheme. The animals are to be studied with special reference to their habits and environment.)

Protozoa:—Rhizopoda—(Lobosa, Foraminifera, Heliozoa, and Radiolaria.)

Mastigophora. (Flagellata.)

Infusoria. (Ciliata.)

Sporozoa.

Types.—Amoeba, Euglena, Volvox, Paramecium, Vorticella, Monocystis and Malarial Parasite.

Coelenterata:—Hydromedusae (and all its orders).

Scyphomedusae (and all its orders).

Anthozoa (zoantharia and Alcyonaria),

Ctenophora.

Types:—Hydra, Obelia, Aurelia, Sea-Anemone and Horniophora.

Platyhelminthes:—Types: Taenia and Liver-Fluke.

Nemathelminthes:—Types: Ascaris.

Annelida:—Archannelida.

Chaetopoda (Polychaeta and Oligochaeta).

Hirudinea.

Echiurodia.

Types:—Neries, Earth-worm and Leech.

Arthropoda:—Crustacea (Entomastrea and Malacostraca).

Types:—Streptocephalus, Lepas, Sacculina, Prawn and Crab.

Onychophora:—Peripatus.

Myriopoda:—(Centipede and Millipede).

Insecta: (Aptera Orthoptera, Coleoptera, Neuroptera, Hymenoptera, Hemiptera, Diptera and Lepidoptera).

Types :—Cockroach.

Arachnida :—Scorpion, Spider and Limulus.

Type: Scorpion.

Mollusca :—Pelecypoda.

Gastropoda.

Cephalopoda.

Types :—Mussel, Chiton, Pila (Ampullaria), (Ahpullaria) and Sepia.

Echinodermata :—Asteriidea.

Ophiuroidea,

Echinoidea,

Holothuroidea,

Orinoidea.

Types :—Starfish, Brittlestar, Seaurchin, Sea Cucumber, and Feather star.

Chordata :—

Prochordates :—Balanoglossus, Ascidia and Amphioxus.

Vertebrata :

Pisces: Elasmobranchii.

Teleostei,

Dipnoi.

Amphibia: Anura,

Urodela,

Gymnophiona.

Reptilia : Lacertilia,

Ophidia,

Chelonia and Crocodilia.

Aves: Archaeornithes,

Neornithes (Ratitae and Carinatae).

Mammalia: Prototheria,

Metatheria (Diprotodontia and Polyprotodontia.)

Eutheria (Edentata, Sirenia, Proboscidea, Ungulata,

Cetacea, Carnivora, Rodentia, Insectivora, Chiroptera,

Prosimiae and Primates.

Types:—Balanglossus, Ascidia, Amphioxus, Dog-fish, Bony Fish, Frog, Calotes, Pigeon, and Rabbit.

A general knowledge of the theories of Evolution. Heredity and Adaptation.

Practical Work:—Candidates will be expected to have a practical knowledge of the structure and shall be required to make dissections and simple microscopical preparations of any of the following types:—Earthworm, Neries (external features), Leech, Prawn (external features), Scorpion, Cockroach, Fresh-water Mussel, Ampullaria, Sepia, (external characters). Frog, Pigeon, (nerves excepted) and Rabbit (nerves excepted).

Candidates shall submit to the examiners before the hour of the practical examination, their laboratory note-books duly certified by their professors as a *bona-fide* record of work done by them.

Geology (Main).

Geology (Main).

A course of lectures on the following:—

1. Physical and Dynamical Geology.
2. Crystallography and Mineralogy.
3. Petrology.
4. Structural and Field Geology.
5. Economic Geology.
6. Stratigraphy, Indian Geology and Palaeontology.

1. *Physical and Dynamical Geology.*

The aims, met' o'ls and applications of Geology as a Science; its subdivisions.

The Earth: its relations to the members of the solar system; its evolution; its movements and their effects; its shape, size, density, main principles of determination of the age of the earth.

The atmosphere: Its nature, extent and movements; climate, weather seasons; elements of meteorology.

The Hydrosphere; extent, composition and movements; effects on climate.

The lithosphere: constituents of the crust, probable nature of the interior; rate of downward increment of internal heat; main divisions of rocks and their mode of occurrence.

Geological agents: Hypogene—igneous activity; volcanoes, their form and structure, their action, cause, results and products.

Earthquakes, nature, origin and effects, relationship to volcanoes. Epigene: Heat, cold water, wind, ice and organic agents.

Erosion, transportation and deposition considered with each of the agents, Characters of deposits—terrestrial, fluvial, marine, lacustrine, glacial and organic Earth sculpture.

2. *Crystallography and Mineralogy.*

Distinction between amorphous substance, crystal: mineral and rock. Crystals: lines, planes, axes and centre of symmetry. Laws of crystallography. Crystal systems; crystal notation; important holohedral and homihedral forms and their combinations; contact goniometer; principles of reflecting goniometer; the important types of twinning and twinned crystals.

Elements of crystal drawing.

Physical characters of crystals; isomorphism, dimorphism, isodimorphism, paramorphism, pseudomorphism.

Simple dry and wet tests for identifying minerals.

Main principles of optics leading to the recognition of minerals.

Pleochroism and absorption, extinction angles; inference.

Phenomena, positive and negative crystals.

Study of the more important rock-forming and economic minerals.

3. *Petrology.*

Aqueous, igneous and metamorphic rocks, their origin, mode of occurrence, composition, structure and texture; alteration and metamorphism (including contact and regional) of rocks.

Construction and use of the petrological microscope; its use in the identification of minerals and rocks by means of ordinary and plane—polarized light.

4. *Structural and Field Geology.*

Structural features of the different classes of rocks, lamination, bedding, joints, overlap, unconformity, concretions and secretions, strike, dip, faults, folds—their effect on topography.

Construction and interpretation of geological maps and sections. Simple problems in structural geology.

5. *Economic Geology.*

Forms and origin of ore deposits, important characters of the main types—Magnetic, pneumatolytic, tydatogenetic, metasomatic, metamorphic and detrital.

Elementary knowledge of the chief economic ores and minerals of India, and their main uses:—Coal, petroleum, water and building stones, salt, magnesite, gold, silver tungsten, chromite, manganese and iron ore.

Elementary principles of prospecting,

6. *Palaeontology and Stratigraphy.*

Fossils: their natures and preservations, their value as indices of age and climate, distribution of the main groups in time, recognition and drawing of the more important types.

Correlation of strata and homotaxis.

Elementary knowledge of evolution in the organic world.

Geological sequence; standard European Geological formations, their lithological and palaeontological characters; Indian geology studied likewise, physiographic and climatic conditions of the different epochs and systems, glacial epochs.

Practical Work.

Physical properties of minerals—density, hardness, fusibility.

Drawing of crystals of the more important minerals.

Examination of important rock-forming minerals and rocks in hand specimens and under the microscope.

Dry and wet tests for the identification of important minerals.

Reading of geological maps and construction of sections.

General acquaintance with field work, including the maintenance of field notes and specimens' collection in excursions.

Study and drawing of a representative collection of fossils.

Laboratory note-books.

Viva voce questions may be asked.

Geology Subsidiary

Geology (Subsidiary).

Physical Geology.

The aims, methods, and applications of Geology. The earth. The nature and character of atmosphere, hydrosphere, lithosphere.

Work of the geological agents, character of deposits. Earthquakes and Volcanoes, their nature, origin and effects. Water supply-permeable and impermeable strata.

Structural Geology.

Evolution of surface features. Dip and strike, folds and faults, outcrops of simple structures in relation to topography. Study of simple geological maps and construction of sections.

Stratigraphy.

The geological record, sub-division into groups, systems and series: leading features and fossils; and Elementary knowledge of the geology of India.

Crystallography and Mineralogy.

Six systems of crystals. Symmetry. Weiss and Miller symbols. Contact goniometer. The most important holohedral and homihedral forms. Simple twins. Density, hardness and other physical properties of minerals. Study of the most important rock-forming minerals-chemical composition, crystallography and physical characters.

Petrology.

Classification of rocks. Study of the chief types of igneous, metamorphic and aqueous rocks in handspecimens.

Palaeontology.

Fossils, their mode of preservation, value of fossils. Study and drawing of type specimens from the various phyla.

Practical Work.

Determination of density and hardness of minerals. Identification of crystal habits and some important combinations of habits. Megascopic examination of the chief minerals and rocks. Study and drawing of a set of fossils. Easy exercises on geological maps and sections.

Physiology (Main).

Physiology main

(A) *Physiology.*

General:—

History and scope of Physiology. Characteristic features of living substance. Conditions of life. Structure and Chemistry of Protoplasm, Surface tension, Osmosis, Hydrogen-ion concentration. Colloids and their behaviour. Cell protoplasm Nucleus. Reproduction of cells.

Circulatory System :

Origin, composition and properties of blood. General character and formation of Lymph. Blood and Lymph as protective mechanisms. Circulation of blood, Physiological characteristics of the heart. Work of the heart, Cardiac cycle. Nature of cardiac contraction. Sounds of the heart. Nervous control of the heart. Circulation through various organs. Physiology of capillary circulation treated in an elementary manner. Blood pressure, methods of measurement of blood pressure. Effect of the heart beat on blood pressure. Pressures in capillaries, veins and lymphatic vessels. Features of blood flow. Influence of posture and gravity on circulation. Shock and its general causes.

Respiratory system :—

Organs of respiration. Internal and External respirations. Mechanism of external respiration. Movements of respiration. Amount of air respired. Interchange of air by diffusion. Respiratory sounds. Respiratory Rhythm. Nervous regulation of respiration. Interaction of circulation and respiration. Influence of the heart on respiration. Internal

respiration. Effects of respiration on the air breathed. Effects of respiration on the blood. Causes of respiratory exchange. Blood as carrier of oxygen and carbondioxide. Ventilation. Asphyxia.

Digestive system :—

Nature of food. Proximate principles of food. Sources of the proximate principles. Dietetics. Digestion of the food stuffs. Secretion and properties of the digestive juices and bile. Movements of the stomach and intestine. Mode and channels of absorption of food. Storage of surplus food. Functions of the Liver and Pancreas.

Metabolism :—

Factors influencing metabolism, age, climate, nature of work, etc. Basal metabolism during starvation. Metabolism of proteins. Carbohydrates and fats treated in an elementary manner. Insulin and carbohydrate metabolism. Regulation of temperature.

Muscle nerve physiology :—

Functions of the muscular tissue. Muscular movement. The graphic registration of muscular contractions. Methods of stimulation of muscle and nerve. Character of contraction of muscles. Chemistry of muscle. Heat production in muscle. The neuron and its conducting paths. Phenomenon of conduction in nerve. Reaction of nerve and muscle and constant and interrupted electrical currents.

Excretory system :—

The secretion of urine. Expulsion of urine. Micturition. Composition of urine. Functions of the skin and its appendages.

Nervous system :—

Significance of the nervous system. Functional arrangement of the nervous system. Reflex action. Functions of the spinal cord. Functions of the autonomic system. Sympathetic and parasympathetic nervous system. Functions of the medulla oblongata, and associated nerves. General functions of the cerebrum. Cerebral localization. Functions of the cerebellum. Formation and properties of conditioned reflexes. Cerebro-spinal fluid, its formation, composition and functions.

Sense Organs :—

Classification of sense organs. General features of Receptors. Physiology of the ear and eye and other sensory organs treated in an elementary manner.

Endocrinology :—

The thyroid. Parathyroid; thymus, adrenal bodies, Hypophysis, pineal body. Testes and ovaries. Haemolymph glands.

Reproductive system :—

Growth regeneration and reproduction .Physiology of the male and female reproductive organs treated in an elementary manner. Functions of the foetal membranes, Nutrition of the embryo. Foetal circulation.

(B) *Histology :—*

[Lectures are to be correlated with practical work and students will be expected to be familiar with the staining methods.]

Cell :—

Structure of the cell. Cell-division. Connective tissues. Pigment cells, Adipose tissue. Wharton's Jelly. Elastic, Feorous and hyaline cartilage. Ossification and bone. Contractile tissues. Skeletal muscle, smooth muscle and heart muscle. Nerve cell. Structure of the spinal cord at various levels, cortex and cerebellum. Nerve fibres, Nerve endings. Ganglion cells.

Blood vessels :—

Aorta, smaller artery bronchial artery and vein. Lymphatic vessels and tissues, lymphoid tissue, lymph gland, spleen and tonsil.

Alimentary tract :—

Tongue, oesophagus, stomach, intestine, salivary gland, Pancreas and liver.

Respiratory system :—

Larynx, trachea, bronchi and lungs.

Urinary tract—Kidney, ureter.

Ductless glands—Thyroid, parathyroid, thymus, pineal body, pituitary body, pancreas adrenal body. Reproductive system—Testes, ovaries, vas deferens, uterus etc.

(C) *Experimental Physiology :—*

A working knowledge of the electrical apparatus in common use in physiological experiments. Cells, electrodes, key, Commutator. Rheochord and Induction coil.

Certain simple experiments illustrating the use of the above apparatus.

The muscle-nerve preparation. The recording of muscular contractions, Superposition. Tetanus.

Action of Veratrine and Curari. Effect of fatigue on muscle.

Polar excitation of nerve, electrotonus, Galvanism and Faradism.

The Frog's heart. Stannius' experiments, peculiarities of Cardiac contraction, Cardiac nerves of frog.

The capillary circulation in the frog's web and mesentery.

Sheep's heart, action of valves, the use of the Dudgeon Sphygmograph,

Arterial pressure in man. Sphygmomanometer.

The respiratory movement in man. Stethography.

Vital capacity. Artificial respiration.

Reflex action in frog. De-cerebrated frog.

The enumeration of blood corpuscles. Estimation of Haemoglobin.

(D) *Bio-Chemistry* :—

Students will be expected to have a fuller knowledge of the portions specified in the syllabus as a subsidiary subject in addition to the following:—

Theory :—

Vitamins. Chemistry of bile. Vanden Bergh's reaction. Bacterial decomposition in the intestines. Physiological detoxications, glycol and ornithin derivatives. Glycourates. Ethereal sulphates. Methylation. Oxidation and reduction and acetylation. chemistry of internal secretions.

Practical :—

The preparation and estimation of amino-acids. Hydrolysis of fats. Quantitative estimation of carbohydrates. Indirect calorimetry. Basal metabolism. Estimation of PH. Quantitative estimation of important constitutions Alkali reserve. Blood gases. Analysis of air. Quantitative analysis of urine. Liver and Kidney efficiency tests. Analysis of gastric contents.

Physiology (Subsidiary).

(A) *Physiology* :—

Physiology (Subsidiary)

Chemical composition of the animal body; physiology of the cell. Histology of animal tissues. General physiology of muscle and nerve. Food and dietetics. Digestion, absorption and nutrition. Blood, lymph and tissue fluids. Physiology of the heart and blood vessels. Respiration. Excretion, Metabolism and regulation of temperature. Skin and its appendages. Central nervous system. Autonomic system. Special sense organs. Endocrinology. Reproduction. Elementary facts of general physiology as indicated below:—

Protoplasm, its structure and properties, surface action, surface tension, absorption etc, Properties. of colloids. Permeability of membranes. Osmotic pressure. Electrolytes. Functions of water. Catalysis. Enzymes.

(B) *Bio-chemistry*:—

The Chemistry and metabolism of food stuffs. Enzyme action. The chemical constituents of blood, their origin and physiological conduct. Acidosis and alkalosis. The Chemistry of urine and faeces. Urinary pigments, reactions of proteins, fats and carbohydrates. Quantitative estimation of sugar. Digestive enzymes and bile. Qualitative analysis of some common food stuffs. Derivatives of Haemoglobin. Spectroscopic examination of Haemoglobin and its derivatives. Coagulation of blood. Haemolysis chemical tests for blood. Preparation of Haemin and Haemoglobin crystals.

Quantitative estimation of sugar and urea in blood. Use of the calorimeter. Estimation of PH of urine. Testing for the various constituents Urinary sediments. Quantitative estimation of Chlorides, phosphates and urea. Identification of substances of Physiological importance.

(C)

Candidates will be expected to have undergone a course of practical instruction in Practical Physiology, Histology and Elementary Bio-Chemistry, and certificates of such attendance should be produced from the Professors concerned.

CHAPTER XLIV.

B.Sc. (HONOURS) DEGREE EXAMINATION.*(Regulations)***A—With Physics or Chemistry as main subject.****Conditions of
Admission.**

1. Candidates for the Degree of Bachelor of Science (Honours) shall be required—

- (i) to have passed the Intermediate Examination in Arts and Science of this University or the Intermediate examination of any other Statutory Indian University accepted as equivalent thereto ;
- (ii) to have undergone subsequently a further course of study in the University College as prescribed hereunder, extending over a period of three years, each consisting of three consecutive terms; and
- (iii) to have passed the examination for the degree hereinafter prescribed.

**Courses of
Study.**

2. The course for the B.Sc. (Hons.) Degree shall comprise instruction in—

Part I—(a) English and (b) a simple course in French or German.

Part II—Any one of the following branches of knowledge:—

- (i) Physics as the main subject with Chemistry and Mathematics as subsidiary subjects.
- (ii) Chemistry as the main subject with Physics and Mathematics as subsidiary subjects.

**Part I (a)
English,
Part I (b)
French or
German.**

3. The examination in Part I (a) English shall be a paper of three hours' duration based on two prescribed text-books, one for detailed study and the other for non-detailed study: (this paper shall be the same as that for B.Sc. Pass Degree Examination); and in Part I-(b) a simple course in French or German. Candidates who have passed in French or German under Part II in the Intermediate Examination shall not be required to undergo the course or sit for the examination prescribed for Part I-(b)

Part II.

4. The courses of study in the main and the subsidiary subjects under Part II shall be as detailed below:—

* *Vide* foot-note on the first page of Chapter XXXIX.

Physics (Main).

A candidate shall be required to have a sound knowledge, **Physics**
experimental and theoretical, of:— **(Main).**

- (i) Properties of Matter and Dynamic Theory of Sound.
- (ii) Sound and Heat.
- (iii) Light.
- (iv) Electricity and Magnetism.
- (v) Modern Physics.

Each candidate shall submit his laboratory note books containing the record of all his practical work performed during the period of study for the examination. The record shall be countersigned by the Professor or Professors under whom the candidate has worked and shall be certified as a *bona fide* record of work performed by the candidate. It shall be submitted on the first day of the practical examination to the Examiners engaged in conducting the examination.

There shall be six papers in theory, two on Modern Physics and one on each of the remaining four subjects. Each paper shall be of three hours' duration and shall carry 100 marks. There shall be four papers in practical, one on each of the above subjects (i) to (iv). Each paper in practical shall be of three hours' duration and each shall carry 100 marks and the practical records submitted shall carry 100 marks.

The scope of the several subjects shall be as defined in the syllabus.

Chemistry (Main)

A candidate shall be required to have a sound knowledge, **Chemistry**
experimental and theoretical, of:— **(Main).**

- (1) General and Historical Chemistry.
- (2) Physical Chemistry.
- (3) Inorganic Chemistry.
- (4) Organic Chemistry.
- (5) Any one of the following special subjects:—
 - (i) Electro-Chemistry.
 - (ii) Technical Gas Reactions.

- (iii) Analytical Chemistry.
- (iv) Chemistry of rarer elements and their industrial uses.
- (v) Tinctorial Chemistry.
- (vi) Bio-Chemistry.
- (vii) Chemistry of Sugars and Carbohydrates.
- (viii) Chemistry of Colloids.
- (ix) Chemistry of foods and Drugs.

There shall be five papers in theory, each of three hours' duration on each of the above five subjects. Each paper shall carry 100 marks. There shall be four papers in practical, one on the special subject and the rest on the general subjects, viz., Inorganic, Organic and Physical Chemistry. The practical examination in the special subject and Physical Chemistry shall be of 6½ hours' duration each and that in Inorganic Chemistry and Organic Chemistry shall be each of 12 hours' duration (6 hours per day). The practical examination in each subject shall carry 100 marks and the practical record submitted shall carry 100 marks.

Each candidate shall submit his laboratory note books containing the record of his practical work performed during the period of study for the examination. The record shall be countersigned by the Professor or Professors under whom the candidate has worked and shall be certified as a *bona fide* record of work performed by the candidate. It shall be submitted on the first day of the practical examination to the Examiners engaged in conducting the examination.

The scope of the several subjects shall be as defined in the syllabus.

Mathematics (Subsidiary)

There shall be two papers each of three hours' duration. Each paper shall carry 100 marks.

The examination and syllabus shall be the same as that for the candidates taking the course in Mathematics as a subsidiary subject for the B.Sc. (Pass) Degree examination.

Physics (Subsidiary)

There shall be one paper in theory and one in practical, each of three hours' duration. Each paper shall carry 100 marks. The examination and syllabus shall be the same as that for the candidates taking the course in Physics as a subsidiary subject for the B.Sc. (Pass) Degree examination.

Chemistry (Subsidiary)

There shall be one paper in theory and one in practical, each of three hours' duration. Each paper shall carry 100 marks.

The syllabus shall be the same as that prescribed for the candidates taking the course in Chemistry as a subsidiary subject for the B.Sc. (Pass) Degree Examination.

The scope of the subject shall be as defined in the syllabus.

5. No candidate shall be eligible for the B.Sc. (Honours) Degree until he has passed the examination in Part I and in one of the branches of knowledge in Part II detailed in the courses of study. **Eligibility for the Degree.**

6. A candidate shall be permitted, at the end of the first year, to appear for the examination in Part I (a) English Composition and (b) French or German and at the end of the second year in the subsidiary subjects.

7. The examination in Part I shall be (a) a three hours' paper on English Composition and (b) a two hours' paper on Translation. A candidate may present himself for the examination in Part I (i.e. English and Translation) at the end of the first year of the course and thereafter at his option present himself for either English or Translation or both provided that candidates who obtain qualifying marks for a pass either in English or Translation need appear again in that subject in which they failed. **Marks qualifying for a pass in Part I.**

A candidate shall be declared to have passed the Part I examination if he obtains not less than 40 per cent in each of the papers on English and Translation. All other candidates shall be deemed to have failed in the examination. Successful candidates obtaining not less than 60 per cent shall be declared to have passed with distinction in that subject.

8. No candidate shall be admitted to the examination in Part I unless he has passed the Intermediate examination in Arts and Science of this University or an examination of any other statutory Indian University accepted as equivalent thereto and has undergone the prescribed course. **Qualification for admission to the Examination.**

9. No candidate, other than those hereinafter exempted, shall be permitted to appear for the examination in the Main subject **Admission to the final examination.**

in the case of candidates offering physics or chemistry as the main subject unless he has passed the Part I examination.

B. Sc. Pass
candidates to
appear for
Honours
Examination.

10. A candidate for the B.Sc. (Honours) Degree who has passed the B.Sc. (Pass) Degree Examination shall be permitted to appear for the B.Sc. (Hons.) Degree Examination after a further two years' course in the University College, provided he has passed the B.Sc. Degree examination in the subjects in which he desires to appear for the Honours examination. He shall be exempted from passing the examination in Part I and from the examination in the subsidiary subjects, provided he undergoes one year's course in simple French or German.

11. A candidate for the B.Sc. Honours degree shall appear for the examination in Part II not later than the end of the fourth year after commencing the Honours degree course in the University Colleges, provided however Bachelors of Science proceeding to the B.Sc. (Honours) degree examination (*vide* section 10 *supra*) shall appear not later than three years after commencing the B.Sc. (Honours) degree course in the University College.

For purposes of this regulation, the Part II examination shall mean the examination in the main subject in the case of Physics and Chemistry main groups.

12. No candidate shall be permitted to undergo the examination in Part II more than once. A candidate for the final examination shall however be permitted to withdraw from the examination provided he has not sat for the last paper in the written examination or the last practical examination in the subject; and provided also he has given notice of withdrawal to the Registrar within three clear days after the date of the last paper (theory or practical) which he answered. He shall be permitted to appear again for the examination in the main subject in the following year without producing any additional certificate of attendance. Nothing in this regulation shall apply to the examination in the subsidiary subjects.

13. In the event of a candidate for the B.Sc. (Hons.) degree failing to satisfy the Examiners in Part II of the examination, he may be recommended by them for the B.Sc. (Pass) Degree provided he has passed the examination in Part I and has obtained not less than 30 per cent of the marks in each subject, both Main and subsidiary, in Part II. Candidates for Honours recommended for B. Sc. pass degree.

14. A candidate who is not already eligible for the B.Sc. (Pass) Degree, and has failed completely in the B.Sc. (Hons.) Degree examination, shall be permitted to appear for the B.Sc. Degree examination in the subjects in which he has already appeared without the production of a further certificate of attendance in an affiliated College. Candidates failing in Honours may appear for B. Sc. privately.

15. A candidate shall be declared to have passed the B. Sc. (Hons.) Degree Examination if he has obtained not less than 40 per cent of the total marks in the main subject and 30* per cent of the total marks in each of the subsidiary subjects under Part II, provided however no candidate shall be deemed to have passed in the main subject under Part II unless he gets not less than 33 per cent of the total marks in each of the two divisions of the main subject, viz., (i) Theory of the main subject; (ii) practicals of the main subject, including the practical records submitted. Marks qualifying for a pass.

16. Candidates obtaining Honours shall be ranked in the order of proficiency as determined by the total marks obtained by each in the Main subject and shall be arranged in three classes:— Classification of successful candidates.

The *first* consisting of those who obtain not less than 60 per cent; the *second* of those who obtain not less than 50 per cent; and the *third* of those who obtain not less than 40 per cent of the total marks.

* This will be 40 as from 1940-examination.

B—With Chemical Technology as Main Subject.**Conditions of Admission.**

17. A candidate for the B.Sc. (Hons.) degree in Chemical Technology shall be required—

- (i) to have passed the Intermediate examination (with Physics, Chemistry and Mathematics as optionals) of this University or any other examination accepted as equivalent thereto ;
- (ii) to have undergone subsequently a further course of study in the University College, as prescribed hereunder, extending over a period of three years, each consisting of three consecutive terms ;
- (iii) to have passed the examination for the degree hereinafter prescribed ; and
- (iv) to have undergone at least 2 months of practical training in any approved factory or workshop either during the course or immediately after its completion and before the degree is awarded.

Courses of Study.

18. The course shall comprise instruction in—

Part I—(a) Mathematics, (b) Physics, (c) Chemistry and (d) Descriptive Engineering including Machine Drawing and Workshop Practice.

Part II—Chemical Technology, Chemical Engineering and any one of the following special subjects for the study of which provision may be made by the University:—

- (i) Sugar ;
- (ii) Pharmaceuticals and fine chemicals ;
- (iii) Oils and Fats (including essential oils) ; and
- (iv) Ceramics.

Scope of subjects.

19. The scope of each subject shall be as defined in the syllabus prescribed.

Part I:
Mathematics,
Physics,
Chemistry and
Descriptive
Engineering.

20. The examination in the several subjects in Parts I and II shall be as detailed below :—

PART I.

Mathematics.—There shall be one paper of three hours' duration, carrying 100 marks.

Physics.—There shall be two papers, one written, of three hours' duration and one practical, of three hours' duration. Each paper shall carry 100 marks.

Chemistry.—There shall be three papers in theory and three practicals, one each in Inorganic Chemistry, Physical Chemistry and Organic Chemistry, respectively. Each paper in theory shall be of three hours' duration and shall carry 100 marks. Each practical examination shall be of six hours' duration. Besides the above, there shall be an oral examination. The marks for the practical and oral examinations shall be allotted as below:—

Inorganic and Physical Chemistry	200	marks.
Organic Chemistry	100	„
Practical records	50	„
Oral	50	„

Descriptive Engineering.—There shall be one paper in theory carrying 100 marks and one in practical (workshop practice) each of three hours' duration. The practical examination shall carry 50 marks and drawing records 50 marks.

PART II.

Chemical Technology.— There shall be one paper in theory of three hours' duration and one practical of six hours' duration. Each paper shall carry 100 marks and the records 50 marks.

Part II:
General
Technology,
Chemical
Engineering,
and one Special
subject.

Chemical Engineering.—There shall be one paper in theory of three hours' duration and one practical of six hours' duration. Each paper shall carry 100 marks and the records 50 marks.

Special subject.—There shall be two papers in theory each of three hours' duration and one practical of six hours' duration. Each paper shall carry 100 marks and the records 50 marks.

Marks qualifying for a pass.

21. A candidate shall be considered to have passed the examinations in the several subjects detailed above if he obtains marks as hereunder :—

Subjects.	Written.	Practical (including records and oral if any).	Aggregate.
Mathematics	40 per cent	. .	40 per cent
Physics	35 "	35 per cent	"
Chemistry	35 "	"	"
Descriptive Engineering	35 "	"	"
General Chemical Technology	35 "	"	"
Chemical Engineering	35 "	"	"
Special subject	35 "	"	"

Admission to the Examination.

22. A candidate shall be permitted, at the end of the first year, to appear for the examination in Mathematics and at the end of the second year in the remaining subjects in Part I.

23. No candidate shall be permitted to appear for the examination in Part II unless he has passed the examination in Part I.

Restriction in respect of appearance.

24. A candidate for the B.Sc. (Hons.) degree shall appear for the examination in Part II not later than the end of the fourth year after commencing the Honours degree course in the University College.

Permitted to appear only once.

25. No candidate shall be permitted to undergo the examination in Part II more than once. A candidate shall however be permitted to withdraw from the examination, provided he has not sat for the last paper in the written examination or the last practical examination, and provided he has given notice of withdrawal to the Registrar within three clear days from the date of the last paper (theory or practical) which he answered. Such a candidate may appear again for the examination in Part II in the following year without producing any additional certificate of attendance.

26. Candidates declared to have passed the Honours examination shall be classed, as below, the classification being based upon the marks obtained in Part II only :—

Classification
of successful
candidates.

Class I—Those obtaining 60 per cent and above.

Class II—Those obtaining 50 per cent and less than 60 per cent.

Class III—The rest.¹

When the names of successful candidates are published in the Gazette, they shall be arranged in the order of merit according to the total number of marks obtained.

SYLLABUSES.

Part I. French and German (Same as for B.A. Hons, Part I)

A—Physics (Main)

Properties of Matter.—

Units and dimensions, dimensional formulæ, homogeneity of dimensions in a physical equation, dynamical similarity, simple applications.

The balance, sensibility, stability, faults, Hydrometers—graduation.

Uniform circular motion, centrifugal force, conical pendulum.

Rotational motion: moments of inertia; torque. Energy of rotation angular momentum.

Simple harmonic motion; superposition of two Simple Harmonic Motions in the same direction and in directions at right angles to each other. The simple pendulum, the compound pendulum. Kater's pendulum; corrections due to (a) finite arc of swing, (b) air effect (c) curvature of knife edges, (d) yielding of support. Determination of 'g'; variation of 'g' on the surface of the earth—gravity survey.

Vertical oscillations of a loaded spring; bifilar pendulum; the ballistic pendulum.

Gravitation.—Two-dimensional motion, radial and transverse velocities and accelerations; central orbits, areal velocity. Kepler's Laws of Planetary motion: Newton's Law of gravitation; gravitational attraction and potential—calculation of simple cases; Methods of measuring constant of gravitation; qualities of gravitation.

Elasticity.—Solids—Hook's Law; behaviour of a loaded wire under different conditions; effect of loading on structure. Moduli of elasticity Y , k , n , expression Y and Σ (sigma) in terms of k and n ; torsion of a cylinder: application to shafts; torsion of bars of non-circular cross-section, St. Venant's results and their application to galvanometer suspensions; torsional pendulum. Bending of beams I—section of beams;

vibration of loaded bars; stability of a loaded pillar; flat spiral spring; determination of n and Y . Experimental methods of determining elastic moduli—optical methods—Searle—Ferguson and Andrews. Testing of materials—elements.

Liquids—measurement of k .

Kinetic Theory of Gases; Calculation of pressure, gaseous laws; mean free path; probability of path of given length, collisions with a solid boundary; the co-efficient of viscosity; viscosity gauge; thermal, conductivity; calculation of molecular diameter and a mean free path.

Diffusion; Fick's law of diffusion, Co-efficient of diffusion; diffusion and osmotic pressure; diffusion of electrolytes. Diffusion in gases. Production and measurements of high vacua.

Virial theorem, Vander Waal's equation, size of molecules, Brownian motion in liquids. Perrin's determination of Avogadro's number, Brownian motion in gases.

Surface Tension:—Surface tension and surface energy. Liquid drop in contact with air and resting on a solid or on another liquid; angle of contact; pressure and curvature of a surface, general case of a curved soap bubble; stability of cylindrical films. Methods of measuring surface tension (a) capillary elevation (b) Quincke's method, (c) ripple method, (d) Jøger's method (e) Rayleigh's jet method (f) Method of drops—Rayleigh, Worthington, Iredale, Horkins and Brown, (g) Soap film method. Interfacial surface tension between two liquids. The capillary curve. Force to pull a plate from liquid surface. Surface tension of solutions. Vapour pressure over curved surfaces and the formation of clouds. Theories of capillarity.

Viscosity.—Flow of liquid through a narrow tube; corrections to Poiseuille's formula. Dynamical similarity, Reynold's number, Turbulence. Methods of measuring viscosity of liquids (a) oscillating disc method (b) rotating cylinder method, (c) Stoke's method, Variation of viscosity with temperature and pressure. Lubrication and viscosity—general principles.

Flow of gas through a narrow tube and measurement of viscosity of a gas—Rankine's method.—Variation of viscosity of a gas with temperature and pressure.

Hydro-Dynamics.—Equation of continuity; Euler's equations of motion; velocity potential; Bernoulli's theorem; Torricelli's theorem.

SOUND.

A. Dynamical—Harmonic waves, longitudinal progressive waves; plane waves in a gas. Speed of sound in a gas and along a solid rod. Speed of transverse waves along a cord. Reflection in a fixed and open end. Energy of progressive waves.

Damped S.H.M., forced S.H.M.; energy of forced vibrations and sharpness of resonance; coupled oscillations—without damping, multiple resonance. Theory of combinational tones.

d'Alembert's equation and its solution; vibration of strings—plucked string, struck string and bowed string; torsional vibrations of rods; transverse vibrations of bars, application to tuning fork; vibrations of stretched membrane—rectangular; Chladni's figures.

Vortex formation and Aeolian tones; vibrations of air in wide tubes; open-end corrections; conical tube; edge tones; organ pipe.

B. Physical.

Resonators—Helmholtz's resonator, theory and application; resonator with variable neck and multiple openings. Rayleigh's disc and phonometer, hot-wire microphone, striae in Kundt's Tube; pressure of sound waves: sound radiometers; piezo-electric quartz resonator. Electrical analogy, acoustic impedance, inductance; and capacitance; acoustic filters; double resonators, applications to sound intensity measurements and measurement of absorption co-efficients by stationary wave method; absolute pressure measurements.

Velocity of sound in solids; liquids and gases and its determination. Frequency of sound and its determination; reflection and refraction of sound; Doppler's principle. Sound-wave photography, acoustics of buildings, spark and ripple-tank methods, reverberation.

The ear, limits of audition, minimum amplitude audible and its measurement, theories of audition, mechanism of nerve conduction. Consonance and dissonance, the musical scales, temperament.

Quality of sound, its analysis in various musical instruments acoustic spectra, Miller's Phonodisk, oscillographs; the voice; analysis of speech sounds, harmonic and inharmonic theories, Paget's experiments, Miller and Crandall's work. Speech power, sensation unit-decibel; noise and its measurement.

Gramophones and loud speakers; the photophone and phonoflms.

HEAT.

Thermometry:—Mercury—in—glass thermometry; special types of liquid thermometers, compensated air—thermometer; standard gas-thermometers; constant pressure and constant volume types; reduction of actual observation on real gas-scales to the perfect gas scale. Platinum thermometry; thermo electric thermometry.

Calorimetry:—Specific heat of solids—method of mixtures; Nernst Calorimeter, E. H. and E. Griffith's experiments, liquid air and liquid hydrogen calorimeters. Experiments at high temperatures.

Specific heat of liquids—method of mixtures. Callendar's continuous mixture method; method of cooling. Specific heat of water—experiments of Joule, Rowland, Griffiths, Callendar and Barnes Laby and Hercus First Law of Thermodynamics.

Specific heat of gases (i) at—constant volume—Joly's steam calorimeter. Pier's explosion method. Eucken's experiments on hydrogen at low temperatures; (ii) at constant pressure—experiments of Regnault, Holborn and Henning, Swam, Scheel and Heuse. Ratio of specific heats—experiments of Clement and Desormes, Lummer and Pringsheim, Kundt, Partington and Shilling, Dixon.

Fusion:—Latent heat of fusion; Bunsene's Ice Calorimeter; Measurement of latent heat of fusion of metals.

Evaporation:—Latent heat of vaporisation—experiments of Hennings, Simon and Lange, Berthelot, Awbery and Griffiths; Trouton's rule.

Thermal Expansion:—Linear expansion of solids, of crystals. Fizeau's interference method, Rober's optical lever method, Grunaisen's law.

Expansion of liquids—hydrostatic method, Callendar and Moss' apparatus.

Continuity of State:—Compressibility of gases at high pressures, Andrew's experiments, properties of Vander Waal's equation comparison with experiments; law of corresponding states; Berthelot equation of state. Critical phenomena, properties of a substance near the critical point. Liquefaction of gases; principle of cascades; Joule-Thompson effect, the porus-plug experiment—Hoxton's apparatus; air liquefiers; liquefaction and solidification of hydrogen and helium; use of liquid air and other liquefied gases. Measurement of very low temperatures.

Thermal Conductivity:—Rectilinear flow of heat in an isotropic body, Fourier's linear diffusion law, diffusivity; steady state. Ingen-Hausz's experiment; Forbe's method, Angstrom's method; conductivity of earth's crust. Electrical methods—Kohlrausch, experiments by Jager and Diesselhorst, Conductivity of poorly conducting materials. Wiedemann-Farnz law simple theory—Drude, difficulties of the theory. Super-conductivity. Eucken's determination of conductivity of crystals.

Conductivity of liquids—film-method.

Conductivity of Gases—Hot-wire method, cooling, thermometer method, film-method; variation of conductivity with temperature and pressure, relation between thermal conductivity and viscosity; determination of molecular dimensions.

Thermo-dynamics.—First law, application to specific heats, work done in isothermal and adiabatic expansions.

Heat engines, the Carnot engine, efficiency, Carnot's theorem; Rankine's cycle, performance of an actual steam engine, the indicator, the I. H. P. and B. H. P. mechanical efficiency, thermal efficiency. Internal combustion

engines—the Otto cycle, the Diesel cycle; refrigerating machines, co-efficient of performance. Second law of thermodynamics, absolute scale of temperature; entropy, reversible and irreversible processes, principle of increase of entropy.

Maxwell's thermodynamical relations, application to specific heats, Joule Thomson effect, correction of gas thermometer; thermodynamic—potential at constant volume—Gibbs-Helmholtz equation, thermodynamic potential at constant pressure—application to change of state, equations of Olapeyron and Clausius; specific heat of saturated vapour, triple point.

Radiation.—Theory of exchanges; Kirchhoff's law—applications and quantitative proof; temperature radiation, black body—realisation of; pressure of radiation—experimental proof, energy density and pressure of diffused radiation; Boltzmann's proof of Stefan's law, experimental verification and determination of Stefan's constant—Coblentz. Radiometers; radiation pyrometers—Fery, optical pyrometers, Solar constant—pyroheliometers, effective temperature of the Sun—total radiation method, Wien's distribution law method.

Adiabatic expansion of radiation. Wien's displacement law, experimental verification.

Number of independent vibrations of a continuous medium, Rayleigh's radiation formula, Planck's radiation formula, experimental verification of Planck's law—the isothermal chromatic methods, determination of h , Planck's constant.

Specific Heats and Quantum Theory.—Solids—Dulong and Petit's law—its failure. Einstein's theory and Debye's theory of specific heat of isotropic solids, comparison with experimental results.

Gases.—Degrees of freedom, the equipartition of energy—specific heats comparison with experimental values; specific heat of hydrogen at low temperatures. Application of quantum theory to di-atomic gases.

LIGHT.

Geometrical Optics:—Reflection and refraction at plane and spherical surfaces; principles foci and focal planes, linear and longitudinal magnification; thin lenses, combination of two thin lenses, cardinal points, equivalent lens; thick lenses, cardinal points, linear magnification.

Dispersion and achromatism—dispersive power, irrationality of dispersion; chromatic aberration, achromatic combination of prisms, of thin lenses; object glasses and eye-pieces.

Spherical aberration, caustics, circle of least confusion, focal lines formed by refraction, aplantic surfaces, aplantic points and microscope.

objectives : investigation of and remedy for spherical aberration ; coma, astigmatism, curvature, distortion. Figuring of a spherical surface—Foucault's test.

Optional instruments : Spectroscope, constant deviation type and direct vision type ; telescopes, microscopes ; sextant ; binocular ; stereoscope ; photographic camera : telephotography and microphotography.

Spectrometry : Experimental ; Calibration ; Hartmann's dispersion formula. Production of spectra : types of spectra. Doppler's principles—applications. Spectrometry of infra-red rays, of visible rays, and ultra-violet rays,

The Rain bow :—Spurious bows, Airy's explanation, Miller's experiments.

Velocity of Light :—Fizeau's method, Foucault's method. Newcomb's experiments ; Michelson and Pearson's experiments. The astronomical methods.

Wave Theory :—Huyghen's principle ; reflection and refraction at plane and spherical surfaces ; optical length and optical distances ; Fermat's principle and its application. Rectilinear propagation of light ; zone plate.

Interference :—Conditions necessary for interference ; Fresnel's mirrors ; bi-prism ; Lloyd's mirror ; bi-plate ; split-lens. The plane parallel plate, colours of thin films ; thick plates ; Newton's rings ; Haidinger fringes.

Refractometers ; variation of refractive index with density. Gladstone and Dale's Law, Lorentz—Mossotti formula, Michelson's interferometer, determination of refractive index and dispersion, determination of the length of standard meter, measurement of the diameter of stars : the echelon grating ; Fabry and Perot's interferometer ; Lummer and Gehroke's interferometer. Stationary light waves, colour photography. Testing glass plates for flatness and plane-parallelism.

Diffraction :—Elementary theory of diffraction at a straight edge, narrow wire, narrow rectangular aperture, circular aperture, circular disc. Babinet's principle ; halos, Young's Eriometer.

Plane diffraction grating, dispersive power, resolving power, purity of spectrum, absent spectra ; concave grating, Rowland mounting, Eagle-mounting ; measurement of wave length.

The graphical method of investigating the intensity of diffraction patterns in the cases considered above. Diffraction at a straight edge, Fresnel's theory, Cronu's spiral. Fraunhofer diffraction phenomena, determination of maxima and minima in the case of a narrow rectangular aperture, two equal rectilinear apertures and the diffraction grating,

Resolving power of a prism, of a telescope, of a microscope.

Polarisation:—Polarisation by reflection and refraction; Norrenberg's polariscope; law of Malus; pile of plates.

Polarisation by double refraction, the Nicol's prism.

Huyghen's construction of wave surfaces in uni-axial crystals; experimental verification. Fresnel's theory of double refraction; the normal velocity surface; the wave surface; Axes of single wave velocity; internal conical refraction; axes of single ray velocity; external conical refraction.

Interference of polarised light—colours of thin crystalline plates (i) parallel plane-polarised light (ii) convergent or divergent plane-polarised light; isochromatic and achromatic lines in uni-axial and bi-axial crystals.

Production and detection of (1) plane polarised light (2) circularly polarised light—Fresnel's Rhomb (3) elliptically polarised light—Babinet's compensator, determination of the constants of elliptical polarisation. Elliptical polarisation by reflection.

Rotation of plane of polarisation; Fresnel's explanation of rotation; Fresnel's experiments; Cornu's prism; Babinet's experiments; rotation of plane of polarisation by liquids; polarimeters. Rotatory dispersion, Experimental study of the Faraday Effect.

Electro-magnetic Theory of Light: Derivation of Maxwell's equations, displacement currents, equation for an electro-magnetic wave velocity of the wave; deduction of the laws of reflection and refraction for transparent media; perpendicular incidence; explanation of total reflection; explanation of metallic reflection.

The theory of dispersion—Cauchy, Sellmeier, Helmholtz; Electron theory of dispersion; normal dispersion, anomalous dispersion. Selective reflection—Rest-Strahlen—residual rays from powders.

ELECTRICITY AND MAGNETISM.

Magnetism:

Inverse square law; magnetic field due to a magnet; Magnetic potential couples and forces between magnets.

Terrestrial Magnetism.

Magnetic elements and their determination. The Kew Magnetometer, the dip circle, variation in magnetic elements, recording instruments, magnetic maps. Ships compass—deviations produced by the magnetisation of a ship.

Electro-statics.

Inverse square law, dielectric medium; electrostatic potential; equipotential surfaces; electro-static charge—capacity of a conductor, laws of energy on sharing charge. Total normal induction, Gauss's theorem, electric intensity in simple cases; tubes of induction and lines of force, energy in medium; stress in tubes of induction; Maxwell's theory—its limitations.

Distribution of charge on conductor; force on an uncharged body; boundary conditions; uncharged sphere in an electric field; electrical images—conducting plane and sphere.

Capacity of a condenser—spherical, cylindrical and parallel plate, effect of di-electric on capacity; condensers, construction, different types. Electrometers, absolute and quadrant types, practical uses of Dolezalek Electrometer; sensitive electroscopes and their use, Comparison of capacities and determination of di-electric constants.

Electro-magnetism—Theoretical.

Magnetic shell, Ampere's theorem; strength of the magnetic shell; magnetic field due to an uniformly magnetised sphere. Circular current; Helmholtz galvanometer; solenoidal current.

Work done in carrying a magnetic pole round a current line integral of magnetic field; magnetic field due to a straight current and a solenoid, Magnetic permeability, magnetic induction—boundary conditions; force on magnetic body in uniform field; force on current in magnetic field, suspended coil and ballistic galvanometers; effect of current on current; co-axial coils, Kelvin's ampere-balance, Siemen's electro-dynamometer; Grassot fluxmeter.

Theories of magnetisation—Weber, Ewing, Magnetic induction, intensity of magnetisation. Study of magnetic properties in iron and other materials, the magnetometer method, the ballistic method, Hysteresis, hysteresis tester. Weak and strong magnetic fields. Variation of susceptibility with temperature. The magnetic circuit; Bar and Yoke tests.

Electro-magnetic induction. Lenz's law; self-inductance and mutual inductance. Growth and decay of current; units of inductance. Charge and discharge of a condenser; current and charge in the secondary circuit; the induction coil; methods of measuring inductances. Growth of current in a circuit with inductance, capacity and resistance when a steady E.M.F. is applied; frequency of oscillation; discharge of the condenser when the applied E.M.F. is removed.

Alternating Currents.

Circuit with inductance and resistance, representation by a vector diagram, measuring instruments. Virtual current and E.M.F., Measurement of inductance and power in alternating current circuit; Wattmeters. Circuit

containing capacity inductance and resistance. Choking coil; oscillographs; transformers. Resistance and inductance of wires for currents of high frequency; shielding effect of a mass of metal; repulsion between conductor and circuit carrying alternating current; rotating magnetic field; single-phase and polyphase motor, imaginary quantities, rotating vectors; application to circuit containing inductance capacity and resistance; different inductance bridges; Maxwell's Anderson's Vibration galvanometer. Units.

Electro-magnetic and electrostatic system of units; their relation and practical determination of the ratio, determination of the ohm.

Electrolysis.

Electrolytic dissociation, osmotic pressure. Migration of ions. ionic velocities, theory; experimental determination. Conductivity and its determination; theory of reversible cells, concentration cells; capillary electrometers. Accumulators.

Thermo electricity. Seebeck, Peltier and Thomson Effects. Thermo-electric power, thermo-dynamics of a thermo-couple; the thermo-electric diagram, applications.

Electric Instruments.

Ammeters, Voltmeters; Galvanometers—string galvanometers, ballistic galvanometers; dynamometers; Wattmeters, potentiometers, bridges; measurement of current, resistance and voltage.

Applications of Electricity.

D.C. and A.C. generators and motors. Characteristic curves and efficiency. Induction motors, transformers and transmission of power.

Electro-magnetic radiation.

Plane-waves, Oscillatory discharge. Hertz's experiments; determination of wave-length by stationary oscillations. Oscillators and detectors. The triode valve. Elements of wireless telegraphy and telephony.

Discharge of Electricity through Gases.

Discharge at low pressures; Cathode rays and their properties; Determination of velocities and the ratio m/e of electrons, different methods of determination of e , C. T. R. Wilson's experiments, Millikan's modification.

MODERN PHYSICS

I. *Dielectrics.*

Clausius—Mosotti law for molecular polarisation. Di-electric constant determination using high frequency valve oscillators. Determination of molecular size. Electric polarisation in certain dielectrics: Failure of Clausius-Mosotti's law, Debye's theory of dipoles: Langevin's function. Debye's law for electrical polarisation.

II. *Magnetism.*

Electron orbit theory; Diamagnetism, classical electron theory, Larmor's explanation—precession of electronic orbits.

Paramagnetism—Hypothesis of the resultant magnetic moment of atoms of diamagnetic substances. Curie law. Weiss's hypothesis of internal molecular fields; Weiss's generalised law for paramagnetics. The paramagnetic Curie or critical temperature.

Ferro-magnetism. Internal molecular fields and spontaneous magnetisation. Laws of spontaneous magnetisation above the Curie point and behaviour like paramagnetics obeying Weiss's law. Specific heats of ferromagnetic substances.

Methods of determining susceptibilities of weakly magnetic substances—gases, liquids and solids.

“The Weiss Magnetron” and the “Bohr Magnetron”. Critical examination of the evidence for the existence of the magnetons: Gerlach and Sterne's experiment. Spatial quantisation; Pauli principle. Relation between Weiss and Bohr magneton numbers. Pauli's Theory.

Zeeman Effect; quantum theory of Zeeman Effect. Paschenbach Effect.

III. *Radio-Activity. Nuclear Physics.*

Phenomena of radio-activity; radio-active substances: Characteristics of radio-active radiations. Nature and properties of α , β and γ rays, Methods of measurement—the α , ray and the β and γ ray electroscopes, electrometers. Counting of γ β particles. Scintillation method, electrical method—from the amount of helium collected.

Radio-active decay—radio-active constant. Mathematical theory of decay and of successive transformations by disintegration. Transformation series of radio-active substances. Radio-active evidence of the age of the Earth.

Radio-active gases or emanations, discovery, nature and properties; methods of finding the half value period—Rutherford, Curie.

Range of α particles, range and velocity, ionisation at different parts of range—the Bragg curve. Relation between range and radioactive constant.

Scattering of α rays—explanations, Thomson's model of the atom Rutherford's model. Mathematical theory of scattering and experimental verification. Size and charge of nucleus from scattering experiments. Theory of impact of α particle with the nucleus of a light element. Rupture of the nucleus by α ray bombardment.

Theories of radio-active phenomena—elementary exposition.

Thomson's work; discovery of Isotopes; improved focussing methods of Aston and Dempster in obtaining mass spectra.

Packing effect. Theory of the constitution of the atomic nuclei.

IV. *Optical Spectra.*

Arc and spark spectra; series in line spectra; series relationships, laws of Rydberg-Schuster and Runge; spectral terms.

Hydrogen spectrum—Lyman, Balmer, Paschen, and Brackett series. Rydberg and Ritz formulae for spectra of the general atom; Ritz combination principle.

Quantum theory of spectra Bohr's fundamental postulates. Theory of Hydrogen spectrum; effect of nucleus, Bohr's correspondence principle. Elliptic orbits—Sommerfeld, total quantum number, azimuthal quantum number, radial quantum number. Relativity change of mass, fine structure of hydrogen lines, results of Sommerfeld theory.

Elements of molecular spectra.

V. *X-Rays.*

Production of X-rays. The gas tube, the Coolidge tube; the absorption of X-rays, nature and properties of X-rays, practical applications and uses of E-rays, elements of E-ray technology.

Measurement of X-ray wave lengths X-ray spectrometry.

X-rays and crystal structure with reference to KCl, NaCl, ZnS and C.

The continuous X-ray spectrum; determination of Planck's constant; total intensity and distribution; experiments of Wagner and Kulenkampf.

Quantum theory of X-rays; K, L, M. and N. series. Mosley's law.

Scattering of X-rays; Compton Effect.

VI. *Ionisation and Radiation Potentials.*

Methods of determining ionisation and radiation potentials, electrical and spectroscopic methods—electrical (i) Lenard (ii) Franck and Hertz (iii) Davies and Goucher—distinguishing radiation potential from ionisation potential. (iv) Frank and Einsporn. (v) Partial current method, (vi) Hertz methods. Spectroscopic—Franck and Hertz.

Elastic and inelastic collisions.

VII. *Scattering of Light.*

(a) *Classical Scattering.*—Theory of molecular scattering. Rayleigh. Scattering by gases and vapours, experimental, The blue of the sky. Scattering by liquids. Intensity and polarisation measurements. Theory of Einstein and Smoluchowski and of Raman-Ramanathan. The colour of the sea. Comparison of the depolarisation in the gaseous and liquid states. Optical anisotropy of atoms and molecules.

(b) *Raman Scattering*,—Discovery of the Raman Effect. Experimental method of investigating the Raman Effect. Intensity and polarisation of Raman lines and their qualitative explanation. Relation between Raman Effect and infra-red absorption. Raman effect in the three states of aggregation. Relation between Stoke's and Antistoke's line's (Raman Effect and chemical constitution.

Physics (Subsidiary).

Same as that prescribed for Physics (Subsidiary) for the B.Sc. (Pass) Degree Examination.

A—Chemistry (Main).

GENERAL SUBJECTS.

1. *General and Historical Chemistry.*

2. *Physical Chemistry.*

In addition to a *fuller treatment* of the subjects prescribed for the B.Sc. pass, a study of the following should be made :

Reaction isochore; velocity of trimolecular reaction ; determination of the order of reaction ; theory of indicators,

Theory of galvanic cells ; single electrode potentials ; decomposition potentials ; concentration and gas cells ; hydrogen ion concentration and elementary knowledge of ionic activity ; determination of "e".

Determination of Avogadro's number.

Arrangement of atoms and molecules in crystals, and in unimolecular films.

The practical examination shall include Physico-Chemical experiments on the following subjects :—

Setting up of a thermostat.

Molecular weight determination.

Viscosity.

Surface tension.

Velocity of typical reactions.

Determination of the order of reaction.

Heat of neutralisation, solution, dilution, ionisation and of combustion.

Determination of refractivity.

Polarimetry.

Spectroscopy.

Conductivity.

Transport numbers.

Ionic Velocity.

Concentration cells.

Electro analysis.

Transition point,

Partition co-efficient.

3. *Inorganic Chemistry.*

In addition to a fuller treatment of the subjects prescribed for the B.Sc. pass, a study of the following should be made.

History of Chemistry since the earliest period up to the recent developments.

Atomic structure; atomic number; periodic law; theories of valency; determination of equivalent, atomic and molecular weights; radio-activity; isotopes; chemical crystallography; isomorphism; double and complex salts.

A comprehensive study of the Chemistry of all the commoner elements and their compounds. A short study of the rarer elements, radio-elements and their compounds.

Metallography and Metallurgy.

PRACTICAL COURSE.

Qualitative:—Analysis of mixtures containing not more than six radicals, positive and negative, excluding rare elements.

Preparation of typical compounds like:—Ferrous Ammonium sulphate, chrome alum, anhydrous aluminium chloride, sulphuryl chloride, phosphorous trichloride, hydrazine sulphate, chloropentamine, cobaltic chloride.

Quantitative:—Gravimetric estimation of the individual positive and negative ions excluding the rare metals. Separation of iron from aluminium; iron or aluminium from zinc manganese, nickel and magnesium; lead from antimony; copper from zinc, iron or nickel; calcium from magnesium.

Acidimetry; alkalimetry; oxidation and reduction methods; iodometry; precipitation methods.

Analysis of typical alloys like :—brass, bronze, German silver.

Analysis of minerals :—haematite, pyrolusite, dolomite, limestone, pyrites, chromite.

Analysis of bleaching powder, red lead, water reagents etc.

Analysis of air and coal gas.

4. *Organic Chemistry.*

A fuller treatment of the subject given in the B.Sc. pass course with special reference to recent developments.

Cyanogen Compounds and their Oxy and Thio-derivatives. Their isomerism, ketonic acids and Di-ketones. Polypeptides. Proteins. Configuration of monosaccharides. Chemistry of starch and cellulose.

Cyclo-paraffins and Cyclo-olefines. Benzenoid. Hydrocarbons and their important derivatives, Phenanthrenes. Triphenylmethane and Anthracene dyestuffs. Furane. Thiophene. Pyrones. Coumarins. Chromones and Flavones. Xanthoncs. Natural colouring matters of the Flavone and Xanthone series. Anthocyanins. Diazoles and Triazoles. Pyrroles; Indoles; Indigo, Carbazole. Pyridines. Quinolines. Isoquinolines. Acridines.

Monocyclic, dicyclic and olefinic. Terpenes, Camphors. Pinene, Camphene, Bronylene. Fenchc.

Pyrimidines and Puriness. Alkaloids,

Special types of condensations. Fuller treatment of Geometrical isomerism automerism, and stereo-isomerism of Carbon and Nitrogen compounds. Baeyer's Strain Theory and modern developments. Relation between Chemical constitution and Physical properties.

N.B.—The course may and should be varied from time to time to admit of references to questions more immediately engaging the attention of Chemists.

PRACTICAL ORGANIC CHEMISTRY.

Texts for the recognition of the important classes of Organic compounds. Identification by Physical and Chemical tests and the preparation of derivatives of about 16 pure Organic substances. Separation of about 6 mixtures containing not more than 3 different compounds. Estimation of the more important groups occurring in Carbon compounds e.g., Nitro, amino, hydroxy, carbonyl, methoxy etc. groups. Ultimate analysis by combustion of carbon, hydrogen, and nitrogen in organic compounds. Estimation of halogens and sulphur by Carius method,

Preparation of at least a dozen organic compounds of an advanced type involving the application of important typical reactions.

SPECIAL SUBJECTS.

(i) *Electro-Chemistry.*

The scope of the syllabus is indicated by the books recommended.

(ii) *Technical Gas reactions.*

The scope of the syllabus is indicated by the books recommended.

(iii) *Analytical Chemistry.*

The scope of the syllabus is indicated by the books recommended.

(iv) *Chemistry of rarer elements and their industrial uses.*

The scope of the syllabus is indicated by the books recommended.

PRACTICAL COURSE.

Qualitative:—Analysis of mixture containing rarer elements; spectral analysis; micro-analysis.

Quantitative:—Analysis of more complicated minerals, ores and alloys which may contain rarer elements; analysis of ordinary and special steels; electro-analysis; conducto-metric and potentiometric titrations; assaying.

Special students are required to consult original papers on the subject.

(v) *Tinctorial Chemistry.*

The scope of the syllabus is indicated by the books recommended.

(vi) *Bio-Chemistry.*

Definition and scope; Reactions in the living cell; application of Physico-Chemical principles to their study; Chemistry of the colloid state; Enzymes and the mode of their action; Fermentation of sugar into alcohol; Yeast and its properties; theories of alcoholic fermentation; Chemistry of fats, sterols and lipins and their metabolism in the plant and animal cells; Proteins and Carbohydrates and their metabolism; Drugs; natural and synthetic action of drugs and their relation to Chemical constitution; Chemo-therapy; Chemistry of food; dietetics; isodynamic value of food; Calorific requirement and surface law; normal diet; the energy equivalent of growth; nitrogenous bases forming the active principles of internal secretion; their Physiological action; effect on sex metabolism; blood and its Chemical composition; plasma, serum, fibrinogen etc., mechanism of coagulation of blood; Chemistry of Haemoglobin; specific oxygen capacity of blood; basal metabolism; action of light on biological processes; effect of light energy; photo-synthesis in plants; Chlorophyll, Vitamines.

N.B.—A course of dozen lectures on human Physiology should be given to the students to supplement their course in Bio-Chemistry.

PRACTICAL BIO-CHEMISTRY.

A. Bacteriology.

Making of sterile water and storage.

Making and storing of media: Nutrient broth, Nutrient agar.

Preparation of sterile tubes and plates of agar and gelatine.

Preparation and examination of cultures. Staining of cultures by (a) dry and (b) wet staining process.

Cultivation of anaerobic bacteria by two distinct methods.

Isolation of bacteria from (a) soil and (b) air, and preparation of a pure culture.

Counting of Colonies on Petri Dishes.

Photo-micrography.

Preparation of a pure culture of yeast and determination of its efficiency, Analysis of water: Chemical and bacteriological,

Preparation of indicators and buffer solutions. Determination of Ph values of (a) urine, and (b) a plant sap by electrical and indicator methods.

Tests for proteins. Determination of iso-electric point of Casein.

Preparation of the following amino-acids from natural sources :—

- (a) Glycine ester hydrochloride from gelatine.
- (b) Histidine from animal blood.
- (c) Cystine from hair.
- (d) Tyrosine and Leucine from horn shavings.

Determination of nitrogen in amino-acids by Van Slyke's method.

Mono-Saccharides: Common tests. Estimation of sugar by (a) Bertrand's method (b) Polarimetric method. Experiments with starch.

Yeast: Preparation of a pure culture. Determination of fermenting power. Reduction of Chloral to tri-chloro-Ethyl-alcohol by Yeast and Sugar.

Enzymes: Preparation of Lipase from castor beans, determination of its splitting action. Preparation of malted barley and diastase. Estimation of diastatic power of malt.

(vii) *Chemistry of Sugars and Carbo-hydrates.*

SYLLABUS FOR APPLIED CHEMISTRY OF CANE SUGAR AND OTHER
IMPORTANT CARBO-HYDRATES.

Lecture Course :

Detailed study of the properties and constitutions of the mono and disaccharoses, starch and cellulose. Elements of soil and plant chemistry with special reference to the sugar cane crop. Cane sugar manufacture in detail. Sugar refining. By-products of cane sugar industry and their utilization. Other sources of sugar in India. Elements of the manufacture of starch, paper and artificial silk.

Laboratory Course :

Identification of the more common carbohydrates. Graduation and manipulation of the scientific instruments and apparatus used in sugar analysis. Preparation of reagents required in sugar analysis. Detailed

analysis of sugar cane, sugars and sugar products. Detailed analysis of all factory products and wastes required for the proper chemical control of white sugar manufacture. Estimation of starch maltose and dextrin.

(viii) *Colloid Chemistry.*

Theoretical:

The Colloidal state, methods of preparing colloidal solutions, suspensoids and emulsoids, lyophobic and lyophilic colloids.

Physical properties of colloidal solutions:

- (1) Diffusion of Colloidal particles, Perrin's work.
- (2) Osmotic pressure.
- (3) Tyndall's phenomena, light scattering by colloidal particles, the ultra-microscope, size and shape of the colloidal particles.
- (4) Surface tension and viscosity of colloids.
- (5) Cataphoresis and electrical endosmose.
- (6) Dialysis and ultrafiltration.
- (7) Coagulation by electrolytes, (a) the electric charge of the colloid particles, (b) absorption, (c) hydration of colloid particles.

Elementary treatment of Kinetics of coagulation. Electro-chemistry of colloids. Protective action. Gold number. Peptisation. Sensitisation. Proteins and their colloidal behaviour. Membrane Potential. Donan Equilibrium, Gel and Gel structure. Liesegang Phenomenon Emulsions and their technical treatment. Elementary account of the above, Importance of colloids in Biology, Medicine and Industry.

Practical work:

Preparation of solutions of gold, silver and sulphur, sols, of ferric hydroxide, aluminium hydroxide. Vanadium pentoxide and chromium hydroxide, sols, of sulphides of arsenic and antimony.

Coagulation of colloids.

Cataphoresis.

(IX) CHEMISTRY OF FOODS AND DRUGS

Lecture Course :

Chemistry of the following :

1. Carbohydrates Occurrence, preparation and constitute of mono and disaccharoses, starch, glycogen pectins, glycosides.
2. Proteins Their composition and hydrolysis, classification, structure and reactions. Amino acids and polypeptidos.
3. Oils and Fats Characterisation of fats and oils. Their main components, sterols, lecithin.
4. Vitamins Nature and properties of Vitamins, A.B.C.D. & E.
5. Enzymes and their action Occurrence and Chemical nature of enzymes. The main characteristics of enzyme action.
6. Alkaloids Medicinally important alkaloids, their characteristic properties, uses and chemical constitution,
7. Synthetic Drugs Including organometallic compounds and the relation between chemical constitution and physiological properties.
8. Hormones Adrenaline, thyroxin, insulin.

Laboratory Course :

Proximate analysis of Food stuffs.

Analysis of sugar products.

Examination of facts and oils for their physical and chemical properties. Typical preparations of drugs from natural sources and by synthetic methods.

A few examples of assay of drugs.

50 Lectures and about 180 hours of practical work.

Chemistry (Subsidiary)

Same as that prescribed for Chemistry Subsidiary for B.Sc. (Pass) Degree Examination.

Mathematics (Subsidiary).

Same as that prescribed for Mathematics Subsidiary for B. Sc. (Pass) Degree Examination.

B—Chemical Technology as the main subject**PART I****(a) Mathematics**

Elements of Calculus and Co-ordinate Geometry according to the text-book "Elementary Analysis" by C. M. Jesop. Cambridge University Press, omitting the last chapter.

(b) Physics.

The examination, the syllabus and the papers shall be the same as those for the B.Sc. (Hons.) chemistry main students.

(c) Chemistry.

The syllabus shall be taught with emphasis on the industrial aspects so that it will form a good introduction to the Chemical Technology course.

Lectures.

Inorganic Chemistry.—The Periodic Law as the basis for the classification of the elements and its interpretation in the light of modern advances. Chemistry of the non-metals. The manufacture of industrially important non-metallic elements and compounds. More detailed treatment of the chemistry of Boron, Nitrogen, Phosphorus, Sulphur, the halogens and their compounds.

Systematic study of the metals and their compounds including the more important rare earths and inert gases. The industrial preparations of the more important of these. Alloys and industrial gases.

Organic Chemistry.—The scope of Organic Chemistry. Analysis of organic compounds. Molecular and constitutional formulae.

A study of the important compounds of the aliphatic and aromatic series with emphasis on commercial preparation and uses, the important condensations and reactions involved, the different kinds of isomerism, the methods of establishing constitution and the principles of governing substitution and reaction.

Hetero-cyclic compounds including pyridine, quinoline and isoquinoline, simple alkaloids, indol and indigo.

Elementary treatment of the following: Anthokenthesis and Anthorganesis terpenes, rubber, synthetic dyestuffs.

Physical Chemistry.—General properties of solids, liquids, gases and solutions. Determination of molecular weights. Refractivity. Spectroscopy and Optical activity. Ionic theory and its application, hydrolysis of salts. Electromotive force, theory of indicators and hydrogenion concentration. Thermo-Chemistry. Chemical equilibrium, velocity of reactions, catalysis. Liquifaction of gases. The phase rule and its applications. Some applications of thermo-dynamics in Chemistry. Colloidal state, absorption and surface chemistry.

Practical Course.

Inorganic Chemistry.—Qualitative analysis of inorganic mixtures containing not more than six radicals.

Preparation of about a dozen substances involving typical methods.

Volumetric analysis including acidimetry, alkalimetry, oxidation and reduction methods involving the use of permanganate, dichromate and iodine and precipitation methods.

Gravimetric analysis of calcium, copper, silver, lead, aluminium, zinc, antimony, chloride, sulphate, phosphate, carbonate.

Analysis of mixtures of substances, alloys and minerals. Gas analysis.

Organic Chemistry.—About 15 preparations involving important reactions.

Qualitative analysis.—Identification of compounds by means of reactions for functional groups and preparation of derivatives.

Quantitative analysis.—Estimation of halogens and sulphur and groups, such as the methoxy, nitro, amino and carbonyl and equivalent weights of acids and gases.

Physical Chemistry.—Simple exercises on the following: Molecular weight determinations, velocity of reaction, conductivity, electro-motive force, solubility, partition coefficient, Colloids and absorption.

Density, viscosity, surface tension, refractivity, spectroscopy and polarimetry will be done under Physics.

(d) Descriptive Engineering.

Lecture Course.

1. *Principles of General Engineering (Descriptive)*—

Mechanical properties and uses of Engineering materials, Stress and strain, Modulus of elasticity, Elastic limit, Ultimate strength, Factor of safety and Working stress.

2. *Elementary Building Construction*—

Building materials, foundations, etc., Elementary study of beams, bending moments and shearing forces, Sections of wrought iron, steel and wood.

3. (a) *Elementary Surveying*.

(b) *Dynamics of Fluids*.

(1) *Heat Engines*—

Raising of steam, various types of boilers, steam engines. Internal combustion engines. Transmission of power.

(2) *Electrical Engineering*—

Direct current. Alternating current. Machines and apparatus of different types. Changing of batteries. Power transmission.

Practical.

I. *Drawing Office*—

(a) Geometrical Drawing—Use of scales and instruments. Plane figures, Solid geometry—Principles of projection—Projection of solids placed in simple positions. Plans and elevations of solids. Simple cases of intersection and development of surfaces.

(b) Freehand sketching of Machine details from Models and from Machine parts.

At least three exercises of Machine-parts-drawing to scale.

II. Workshop—

Use of hand and machine tools; Fitting, chipping, filing, scraping, screwing and tapping. Use of scribing block, gauges and squares.

Soldering, brazing, machinery, drilling, boring, turning and milling. Smithy work.

Carpentry, planing, joining, turning and making simple models in wood.

III. Testing Laboratory—

1. Tension, compression, bending, shear, etc.
2. Steam engine trials.
3. Electrical Laboratory.
4. Surveying.

Part II

(a) General Chemical Technology.

Theoretical—

Inorganic.—Metallurgy of iron, copper, lead, zinc, silver, gold and platinum. Manufacture of chlorine, heavy chemicals, acids, alkalis, salts, electro-chemical and electro-thermic industries. Lime, cement, porcelain, glass, silica, fire-bricks and match.

Organic.—Destructive distillation of coal and wood. Coal tar distillation, dye stuffs, textile fibres, oils, fats, waxes, soap, essential oils, drying oils, paint and varnishes, petroleum products, refining of mineral and fatty oils, lubricant alcohol (industrial and absolute), acetic acid, tanini and tanning, synthetic products, cellulose, paper.

Practical.—(1) Analysis of water, fuel, lubricant, fertiliser, steel alloys, brass, bronze, etc.

(2) Unit processes in industrial preparations. Electrolysis, sulphonation, nitration, oxidation, reduction, diazotisation.

(3) Industrial organic and inorganic preparation and purification of minor types.

(b) Chemical Engineering.

Theoretical.—(1) Materials of construction with special reference to their use in Engineering, Chemical and Electro-Chemical Industries.

Metal.—Iron and ferrous alloy, Nickel, Copper, Lead, Zinc, Aluminium, Silver, Tin, Platinum; Alloys such as Nichrome, Monal metal, Brass, Bronze, etc.

Non-metals.—Wood, Rubber, Ebonite, Porcelain, Silica, Earthenware, Enamelledware, Bricks, Cement, etc.

Principles of design and construction of plants with different material.

(2) *Transportation of Solids, Liquids, and Gases.*—Flow of fluids. Stream line and turbulent flow of gases and liquids, fluid films, flow of viscous liquids—measurements of flow, friction factors, long distance transport of fluids. Different kinds of pumps and compressor, etc. Transportation of poisonous and corrosive fluids. Transportation of solids. Conveyors, elevators, cranes, transportation by rail, road and water, etc.

(3) *Heat Transmission.*—By radiation, conduction, convection, coefficient of heat transfer for various types of solids, liquids, gases; flow of heat through different media, dividing wall, etc. Different types of heaters and heat exchangers.

Evaporators.—Different types of evaporators, evaporation through different surfaces, various types of evaporators, their working principles, design, etc.

Distillation.—Distillation at atmospheric pressure, distillation under vacuum; various types of stills fractionation and fractionating columns.

Refrigeration.

Drying—Humidifiers and air conditioning, calcination.

Measure of temperature, thermometers, thermo couples and optical pyrometers.

(4) *Furnaces and Kilns.*—Combustion of fuels in furnaces, heat transfer, heat efficiency, stacks and chimneys, etc.

(5) *Crushers and Grinders.*—Various types of crushers, power consumption, etc.

Mechanical separation.—Screening, shifting floatation; sedimentation, etc.

Filtration principles, different kinds of filters.

Mixing, leeching and extraction, crystallization.

Practical.—Unit processes.

Crushing and grinding, screening, filtration. Temperature measurement; Electrolysis, calorific value of fuels, solids, liquids and gases. Flow of fluids, heat transfer. Evaporation, distillation, calcination, leeching and crystallization.

(c) Special subject.

(1) Sugar.

Theoretical.—Elements of sugarcane agriculture, harvesting and transport.

Extraction of juice, composition of juice, physical and chemical properties; clarification by sulphitation, carbonatation and defecation; filtration; concentration of juice to syrup; boiling of syrup to massecuite; curing; storage and transport of sugar.

Descriptive details of the modern plants for plantation; white sugar manufacture.

Manufacture of gur and sugar by the open-pan system from cane. Refining of raw sugar and gur. Utilization of the bye-products of a cane sugar factory. Plant specification for a white sugar factory (elementary).

Chemical control in cane sugar factories.—Control of milling house, boiling house, pan control, Chemical control in raw sugar or gur refineries. Stock taking, report data and interpretation of the results; calculation used in sugar factory, and sugar factory sanitation.

History of the development of cane sugar industry with special reference to India.

Practical.—Graduation of sugar apparatus, polariscope, refractometer, ionometer, estimation of sugars; analysis of the raw materials, products, chemicals, intermediate products and bye-products of a cane sugar factory and sugar refinery.

Three months' practical training in sugar factories (January to April) reports of the work done to be submitted.

(II) Pharmaceutical Chemistry or Technology of Drugs.

Lecture Course.—Crude drugs, their important constituents, evaluation and uses, Chemistry of Inorganic and Organic substances in common use in Pharmacy. Separation of active principles of natural drugs including vitamins and hormones. Synthetic drugs. Pharmaceutical operations. Assay and standardization of pharmaceutical preparations. Enzymes and their action. Bacterio, sterile solutions, vaccines aera and surgical dressings.

Laboratory Course.—Microscopic examination of drugs including isolation identification of tissues and cells. Microchemical tests.

Small scale preparation of tinctures, liquid extracts and other pharmaco-
poical substances. Examination and standardization of drugs according to the pharmacopoeas. Preparation of some active principles.

Pharmaceutical Botany.

1. *Plant Anatomy*: The cell; cell structure; non-protoplasmic cell contents;—such as sugars, starch, tannin, inorganic crystals, cystoliths, mucilages and gums, resins and oils, glucosides and alkaloids, latex and pigments. Their behaviour to micro-chemical re-agents.

Cell-walls: Their formation and composition. Various kinds of cell walls and the behaviour of each with micro-chemical reagents.

Tissues: Different kinds of tissues, their occurrence and identification, in situ and when isolated.

2. *Taxonomy*: Thallophytes, Bryophytes and Pteridophytes—general characteristics of each group; plants of each group yielding drugs and the nature of parts used.

Gymnosperms—general characteristics; plants yielding drugs with parts of plants used and habitats.

Angiosperms—families yielding important drugs with names of plants, parts constituting drugs and habitats.

3. *Oecology*:—Effects of different habitats on the yield and quality of drugs in the more important medicinal plants; cultivation of medicinal plants.

4. *Practical*:—Microscopic examination and identification of cell contents and tissues of the different parts of a type plant and of the more important medicinal plants.

Making permanent mounts in Canada balsam (after staining of plant material.

Description in technical terms and identification of the more important medicinal plants.

CHAPTER XLV.

POST GRADUATE AND RESEARCH DEGREES.

Regulations.

1. Master of arts (M.A.)

1. A candidate who has qualified for the B.A. (Honours) Degree of the University by passing the prescribed Examination under the Regulations may, without further examination but upon payment of the prescribed fee, proceed to take the M.A. Degree of the University at any Convocation subsequent to his taking the B.A. (Honours) Degree.

II. Degree of Doctor of Philosophy (Ph.D.)

2. The degree of Doctor of Philosophy (Ph. D.) is conferred on persons who have passed the B.A. (Honours) Degree examination, of the University or an examination of any other University recognized as equivalent to the above, and who have satisfied the conditions laid down in the following paragraphs.

3. All candidates for the degree of (Ph.D.) are required to pursue in the University for at least three academic years—the period shall be four academic years in the case of a third-class Honours Graduate—an approved full time course of research under the direction of the Head of the Department concerned or of a member of the University staff appointed by the Vice-Chancellor on his recommendation :

Provided that, after completion of the first year of the course, a candidate may be permitted to devote such periods as may be deemed advisable by the Vice-Chancellor to full-time research in other approved Universities or institutions, or at a place and under conditions approved by the University, while remaining under the direction of the University or of persons nominated by the University.

It shall be competent for the Vice-Chancellor to reduce the period by one year on the recommendation of the Director of Studies in the case of those who have some research work to their credit and who are teachers of the University or are members of the teaching staff in any of the colleges affiliated to the Andhra University or a recognized University for the preceding 5 years.

4. Before entering on the course of research candidates are required—

(a) to submit to the Vice-Chancellor for his approval through the Head of the Department, the general line of research proposed to be undertaken by them ;

(b) to register as students of the University and to pay the prescribed tuition fees.

5. Each candidate shall submit, through the Director of his studies and the Head of the Department concerned, not less than 3 terms in advance of the date of the examination, the subject of his research.

6. On completing the course of research candidates are required to present a thesis on the subject of their research and to satisfy the examiners that it contains original work worthy of publication.

7. Every candidate shall state in his application the special subject within the purview of the regulations for the B.A (Honours) degree of the University upon a knowledge of which he rests his qualification for the Doctorate, and shall, with the application, transmit three copies, printed or typewritten, of a thesis on some special portion of the subject so stated, embodying the result of research or showing evidence of his own work, whether based on the discovery of new facts observed by himself, or of new relation of facts observed by others, whether constituting an exhaustive study and criticism of the published work of others or otherwise forming a valuable contribution to the literature of the subject dealt with or tending generally to the advancement of knowledge. The applicant, in submitting a thesis, shall state generally in a preface and specifically in notes, the sources from which his information is derived, the extent to which he has availed himself of the work of others and the portions of his thesis which

he claims as his original. He shall also be required to declare that the thesis submitted is not substantially the same as the one which has already been submitted to any other University.

A candidate who has passed the B.A. (Honours) or an examination recognized as equivalent thereto in the third class shall be required to pass a written examination consisting of three papers of the Honours Degree Examination at the end of the first year of his research in such subjects as the Director of Studies may prescribe. No one who does not obtain at least 50 per cent of the marks prescribed for these shall be permitted to continue for the Ph D. course.

8. The candidate may also forward, with his application, three printed copies of any original contribution or contributions to the advancement of the special subject professed by him or of any cognate subject, which may have been published by him independently or conjointly and upon which he relies in support of his candidature.

9. The thesis and the original contributions shall be referred by the Syndicate to a Board of three examiners ordinarily drawn from outside India.

10. The Board shall report to the Syndicate the result of the examination of the thesis and if the Syndicate, upon the report, considers the candidate worthy of the Doctorate Degree, it shall declare that the candidate shall be awarded the degree and cause his name to be published with the subject of his thesis and the titles of his published contribution if any, to the advancement of knowledge.

11. If the Examiners do not approve of the thesis once submitted, the candidate may with the previous approval of the Syndicate submit after an interval of not less than six months a revised thesis.

III. Degree of Master of Science (M.Sc.)

12. The Degree of Master of science (M.Sc.) is conferred on persons who have passed the B.Sc. (Honours) Degree examination of the University or an examination of any other University, recognized as equivalent to the above, and who have satisfied the conditions laid down in the following paragraphs.

13. All candidates for the degree of M.Sc. are required to pursue in the University for at least one academic year, the period being two academic years in the case of a third-class Honours or first and second-class Pass Graduates, an approved full-time course of advanced study and research under the direction of the Head of the Department concerned or of a member of the University staff appointed by the Vice-Chancellor on his recommendation.

14. Before entering on the course of research, candidates are required—

(a) to submit to the Vice-Chancellor for his approval, through the Head of the Department, the general line of research proposed to be undertaken by them, and

(b) to register as students of the University and to pay the prescribed tuition fee.

They shall submit to the University through the Director of their Studies and the Head of the Department the subject of their research not later than 1st October preceding the date of the Examination.

15. On completing the course of research, every candidate for the degree of Master of Science shall—

(a) submit three copies of a thesis, printed or type-written embodying the results of the research carried out by him together with the report of the person who supervised his work. He shall state, in a preface to the thesis, the sources from which he has derived information or guidance for his work, the extent to which he has availed himself of the work of others and the portions of the thesis which he claims as original. The thesis should give clear indication of the candidate's ability to conduct research under direction and some knowledge of the technique involved ;

(b) submit a record of the practical work done as a preliminary to the research work ;

(c) appear for a written examination, in the special branch to which the subject of research belongs ; and

(d) undergo a *viva voce* test at the discretion of the Examiners.

A candidate who has passed the B.Sc. Honours examination or an examination recognized as equivalent thereto in the third class or the B.Sc. Pass examination in the first and second class shall be required in addition, at the end of the first year of research, to appear for the following examination :—

(In the case of Physics candidates, two papers on Modern Physics and in the case of Chemistry candidates, one paper in the appropriate subject of the Honours examination.)

Practical Examination (all those prescribed for Honours in the case of Physics and the general subjects in the case of Chemistry), and secure at least 50 per cent of the marks prescribed in the theory and written examinations respectively.

16. The Syndicate shall refer the thesis, practical record and the written paper to a Board of two examiners for report and valuation. The practical record and the written paper shall carry 100 marks each and no candidate shall be qualified to receive the M.Sc. degree unless he obtains at least 50 per cent of the total marks in the practical record and the written paper put together. On receipt of the marks in respect of the practical record and the written paper and the report on the thesis, the Syndicate shall decide whether the candidate may be awarded the degree.

17. (1) If the examiners do not approve of the thesis once submitted, and if the candidate secures at least 50 per cent of the prescribed marks in the practical record and written paper put together, the candidate may re-submit the thesis after revision, taking into account the criticisms of the examiners, after an interval of not less than six months from the date of the first submission.

(2) If the candidate fails to secure 50 per cent of the prescribed marks at the first appearance and if the thesis has been approved, he may appear for the examination a second time after an interval of not less than six months from the date of the first appearance and submit a fresh record.

- (3) If the candidate fails to secure 50 per cent of the marks in practical and theory and if the thesis is rejected, he may appear for the whole examination a second time after an interval of not less than twelve months from the date of the first appearance.
- (4) If the candidate is disqualified at the second appearance, he shall not be permitted to present himself again for the examination.

The Board of Examiners who will also set the paper for the written examination, shall consist of one external and one internal examiner. The internal examiner shall ordinarily be the Director of Studies. The valuation of the practical record and the written paper shall be independent whereas the report on the thesis shall be joint one. The Registrar shall, in consultation with the Principal of the University Colleges, indicate the scope of the examination to the Board of Examiners and the paper shall ordinarily be set so as to give a wide choice to the candidate.

IV. Degree of Master of Science in Technology [M.Sc. (Tech.)]

18. A candidate for the Degree of Master of Science in Technology shall be required—

- (a) to have passed the B.Sc. (Honours) Examination in the University with Technology as the main subject;
- (b) to have undergone subsequently the prescribed course of study in the University for a period of one academic year; and
- (c) to have passed the prescribed examination.

19. The following shall be the subjects of study:—

- (1) German.
- (2) Advanced Chemical Engineering.
- (3) Advanced Chemistry.
- (4) General Technology.
- (5) General Economics.
- (6) Special Technology.

(7) Work corresponding to the requirement of the Home Paper of the I Chem. E. examinations.

20. Each student for the Degree of Master of Science in Technology shall be required to undergo practical training for at least three months in an approved factory and under the direction of a competent person and shall submit through his director at the factory report of the work done to the head of the department.

21. The examination shall be written, practical and oral.

22. The examination in the several subjects shall be as detailed below :—

- (1) German—1½ hours (simple translation)—50 marks.
- (2) Advanced Chemical Analysis—Practical—One paper of 6 hours—100 marks.
- (3) Economics, etc.—One paper of 2 hours—50 marks.
- (4) General Chemical Technology including Chemical Engineering—
One paper theory of 3 hours—100 marks.
One paper practical of 6 hours—100 marks.
- (5) Special Technology—
One paper theory of 3 hours—100 marks.
One paper practical of 6 hours on the analytical control of the special subject chosen—100 marks.
- (6) Home paper—200 marks.
- (7) Oral (when record should be consulted)—100 marks.

23. A candidate shall be declared to have passed the examination if he obtains not less than 40 per cent of the total marks and not less than 35 per cent in each (a) written (b) practical, including oral and records examinations.

24. Candidates declared to have passed the examination shall be ranked in the order of proficiency as determined by the total marks obtained by each and shall be arranged in two classes :

Class I—those obtaining 60 per cent and above.

Class II—the rest.

V. Degree of Master of Science in Chemistry with the special subject Chemistry (including Microscopy) of Foods, Drugs and Water.

25. A candidate for the M.Sc. degree in Chemistry with the special subject 'Chemistry (including Microscopy) of Foods, Drugs and Water' [M.Sc. Chemistry (special subject Foods, Drugs and Water)] shall be required—

- (a) to have passed the B.Sc. (Hons.) or the B.Sc. Pass degree examination (with Chemistry as the main subject) of this University or any other examination accepted by the Syndicate as equivalent thereto; and two other science subjects as subsidiary subjects;
- (b) to have undergone subsequently a further course of study in the University College, extending over a period of one academic year consisting of three consecutive terms, provided however that the period shall be two academic years in the case of pass graduates; and
- (c) to have passed the prescribed examination.

26. The course and scope of instruction shall be as defined in the syllabus prescribed.

27. The examination shall be written, practical and oral.

28. There shall be two papers in theory, each of three hours' duration and three practicals of six and a half hours' duration each. Besides these, there shall be an oral examination. The marks shall be allotted as below :

Written examination :	2	papers each carrying 100 marks	200
Practical	3	"	100
Oral and records			100

29. A candidate shall be declared to have passed the examination if he obtains not less than 40 per cent of the total marks and not less than 35 per cent in each : (a) written, (b) practical (including oral and records) examinations.

30. Candidates declared to have passed the examination shall be classed as below :—

Class I—Those obtaining 60 per cent and above.

Class II—The rest.

When the names of successful candidates are published in the Gazette they shall be arranged in the order of merit according to the total number of marks obtained.

VI. *Degree of Doctor of Science (D.Sc.)*

31. The degree of Doctor of Science (D.Sc.) is conferred on persons who have passed the Master of Science degree examination or the M.B.B.S. Degree Examination of the University or an examination of any other University, recognized as equivalent to the above and who have satisfied the conditions laid down in the following paragraphs.

32. All candidates for the degree of D.Sc. are required to pursue in the university for at least three academic years an approved full-time course of research under the direction of the head of the department concerned or of a member of the university staff appointed by the Vice-Chancellor on his recommendation :

Provided that, after completion of the first year of the course a candidate may be permitted to devote such periods as may be deemed advisable by the Vice-Chancellor to full-time research in other approved universities or institutions, or at a place and under conditions approved by the university, while remaining under the direction of the university or of persons nominated by the university.

33. Before entering on the course of research, candidates are required—

(a) to submit to the Vice-Chancellor for his approval, through the head of the department, the general line of research proposed to be undertaken by them ;

(b) to register as students of the university and to pay the prescribed tuition fees.

34. Each candidate shall submit, through the director of his studies and the head of the department concerned, not less than three terms in advance of the date of the examination the subject of his research.

35. On completing the course of research, candidates are required to present a thesis on the subject of their research and to satisfy the examiners that it contains original work worthy of publication.

36. Every candidate shall state in his application the special subject within the purview of the Regulations for the Master of Science Degree or the M.B.B.S. Degree of the University upon a knowledge of which he rests his qualification for the doctorate, and shall, with the application, transmit three copies printed or typewritten, of a thesis on some special portion of the subject so stated embodying the result of research or showing³ evidence of his own work, whether based on the discovery of new facts observed by himself, or of new relation of facts observed by others, whether constituting an exhaustive study and criticism of the published work of others or otherwise forming a valuable contribution to the literature of the subject dealt with, or tending generally to the advancement of knowledge. The applicant, in submitting a thesis, shall state generally in a preface and specifically in notes, the sources from which his information is derived, the extent to which he has availed himself of the work of others and the portions of his thesis which he claims as his original. He shall also be required to declare that thesis submitted is not substantially the same as one which has already been submitted to any other University.

37. The candidate may also forward, with his application, three printed copies of any original contribution or contributions to the advancement of the special subject professed by him or of any cognate subject, which may have been published by him independently or conjointly and upon which he relies in support of his candidature.

38. The thesis mentioned and the original contributions, if any, shall be referred by the Syndicate to a Board of three examiners ordinarily drawn from outside India.

39. The Board shall report to the Syndicate the result of the examination of the thesis and if the Syndicate, upon the report, considers the candidate worthy of the Doctorate Degree, it shall declare that the candidate shall be awarded the degree and cause his name to be published with the subject of his thesis and the titles of his published contributions, if any, to the advancement of knowledge.

40. If the Examiners do not approve of the thesis once submitted the candidate may with the previous approval of the Syndicate submit after an interval of not less than six months a revised thesis.

41. Particulars regarding dates for submitting applications etc., Ordinance, in respect of MSc. degree examination by research will be found Chapter LIII. Each candidate shall submit through the Director of Research and the Head of the Department, to the Principal University Colleges, three copies of his thesis and one copy of the practical record certified as bonafied by the Director of Research between the 16th and 30th of June or between the 15th and 30th of December.

Candidates for the Ph. D. and D. Sc. degrees shall submit their theses, after the prescribed period of research, to the Registrar so as to reach him between the 16th and 30th June or between 1st and 15th December each year.

A candidate for a research degree whose thesis is rejected on the first occasion may be permitted by the Syndicate to submit the same a second time after revision taking into account the criticisms made by the Examiners appointed in the first instance along with the prescribed fee, but he shall not be eligible to resubmit it on a subsequent occasion should it be rejected a second time.

Transitory Regulations

42. Notwithstanding anything contained above, candidates registered prior to 1st December 1937 for submitting theses in respect of M. A. (Hons.), M. Sc. (Hons.) and M. A. and M. Sc. Degrees examinations in accordance with the old Regulations shall be permitted to continue their work, submit their theses and undergo the examination prescribed not later than the end of 1939.

43. Notwithstanding anything contained above, candidates registered prior to 1st December 1937 for submitting theses for the Ph.D. Degree Examination in accordance with the old Regulations shall be permitted to continue their work, submit their theses and undergo the prescribed examination not later than the end of 1942.

44. Candidates registered by the Syndicate prior to 1st December 1937 for submitting theses for the M. A. (Hons.) Degree examination

may be permitted to appear for the Ph. D. Degree Examination under the new regulations subject to the following conditions :

That they shall satisfy all the conditions prescribed in Sections 2—11 above, provided, however, that the Syndicate may permit the period spent in research under a recognised Director since July 1937 to be counted in reckoning the period of research prescribed in Section 3 above.

Candidates desirous of availing themselves of this exemption shall apply through the Director of Studies to the Registrar so as to reach him not later than 1st July 1938.

45. Candidates registered by the Syndicate prior to 1st December 1937 as persons doing research with a view to appearing for the Ph. D. Degree examination (in the Faculties of Science and Medicine) under the old Regulations may be permitted to appear for the D. Sc. Degree Examination subject to the condition that they shall satisfy all the conditions prescribed in Sections 31 to 40, provided, however, that the Syndicate may permit the period already spent under approved directed research¹ in the Jeypore Vikrama De College of Science & Technology or the Medical College, Vizagapatam, to be counted in reckoning the period of research prescribed in Section 32.

Candidates desirous of availing themselves of this exemption shall apply through the Director of Studies to the Registrar so as to reach him not later than 1st July 1938.

SYLLABUS.

Degree of Master of Science in the Chemistry (including Microscopy) of
¹Foods, Drugs and Water.

The course will correspond to the requirements for the examinations in Branch E, for the Fellowship of the Institute of Chemistry and will cover a minimum period of one year.

Chemistry of foods, carbohydrates, fats, proteins, vitamins, flavours and essences. Storage and preservation of foods. Food poisoning.

Water, its purification and examination. The bacteriology of water-supplies.

Milk and its derivatives.

Fermentation processes and products. The Chemistry of enzymes. Examination of alcohol and alcoholic beverages.

Nutritive requirements of the human body. The Chemistry of digestion and growth.

Chemistry and pharmacology of natural and synthetic drugs.

Poisons and their examinations; antiseptics and disinfectants.

The elements of bacteriology.

Indian and foreign Government regulations regarding foods, adulteration and preservatives in foodstuffs and the adulteration of drugs.

Legal and pharmacopoeial standards of purity.

Laboratory work.

Water analysis. Analysis of mineral waters.

Sugar analysis.

Microscopy of starches, cereals, fibres and crude drugs.

Analysis of oils, fats and waxes. Analysis of soaps.

Analysis of milk and its derivatives.

Alcoholimetry.

Analysis of malt and malted products.

Analysis of flavouring substances, essences, spices, condiments, pickles and patented food products.

Analysis of drugs, chemicals, antiseptics, disinfectants, pharmacopoeial preparations and prescriptions.

Analysis of blood and urine.

Toxicological analysis.

CHAPTER XLVI.

DEGREE OF BACHELOR OF EDUCATION*(Regulations)*

Qualification
for degree.

1. No candidate shall be eligible for the Degree of Bachelor of Education unless he has taken a degree in this University or a Degree in some other University accepted by the Syndicate and has also passed the prescribed examination.

Qualification
of candidates
for Examination.

2. Candidates for the B.Ed. Degree Examination shall have taken, or have qualified for, a degree in this University or have taken a degree in some other University accepted by the Syndicate as equivalent thereto* and shall have thereafter undergone the prescribed course in an affiliated college for three terms.

Conduct of
Examination.

3. The examination shall consist of (a) a practical examination in teaching conducted by a Board of two examiners for each lesson, one of whom shall be a member of the staff of the college presenting the candidates for examination and responsible for the supervision of their training in the subject of examination and the other an external examiner, and (b) a written examination conducted by means of printed papers:

Course of
study.

4. Candidates shall undergo a course and be examined in:

- (i) The Theory and Practice of Education.
- (ii) History of Education and comparative Study of Educational systems.
- (iii) Methods appropriate to the teaching of English.
- (iv) Methods appropriate to the teaching of *one* of the following groups of subjects:—
 - (a) All subjects to young children.
 - (b) Mathematics.

*The following examinations have been recognised by the Academic Council in accordance with section 83 (i) of the Act as equivalent to the B.A. Degree Examination of the University:—

The B.A. and B.Sc. Degree Examinations of all other Statutory Indian Universities and Mysore University.

The B.Com. Degree Examination of all other statutory Indian Universities.

- (c) Physical Science.
- (d) Natural Science.
- (e) History.
- (f) Geography.
- (g) One language other than English.

Candidates shall also undergo a course in practical training, including instruction in school management and practice in teaching.

5. Candidates for the written part of B.Ed. Degree Exam-Subjects for
nation shall answer the following papers :— Examination,

- (i) The Theory and Practice of Education, Part I.
- (ii) The Theory and Practice of Education, Part II.
- (iii) History of Education and the Comparative Study of Educational Systems.
- (iv) Methods appropriate to the teaching of English.
- (v) Methods appropriate to the teaching of one of the subjects mentioned in section 4 (iv) above.

At the practical examination each candidate shall be tested by means of two lessons of his choice, one in English and the other in special subject. The duration of each lesson shall ordinarily be half an hour or half a school period. Candidates shall submit full teaching notes of their lessons to the examiners before commencing their lessons. The practical test in teaching shall carry 200 marks, 100 marks for English and 100 marks for the special subject, 40 per cent of the marks in each case being allotted to practical work done by the candidates during the course of their training. In addition to actual teaching work, this practical work shall include the writing of notes of lessons, reports of lessons observed, and records of other practical work, if any, done during the course in (1) English and (2) the special subject. A statement of the marks awarded shall be forwarded by the Principal of the College to the Registrar of the University along with the progress certificates of the candidates, about the middle of March each year.

Candidates applying for the examination for the first time shall apply for both parts of the examination; but a candidate failing in one part of the examination shall be permitted to re-appear at a subsequent examination for that part, and shall, if he passes in it, be declared to have passed the B.Ed. Degree Examination.

Marks qualifying for a pass.

6. Candidates who secure 40 per cent of the aggregate marks in English and in the special subject in the practical work done at college and in the practical examination in teaching, taken together shall be declared to have passed in the practical test.

Candidates who obtain not less than 35 per cent of the aggregate marks in papers (i) (ii) & (iii) of the written examination, taken together, and not less than 35 per cent of the marks in each of the papers (iv) and (v), but not less than 40 per cent of the aggregate marks in papers (iv) and (v) taken together, shall be declared to have passed the written examination.

Of the candidates who pass both the practical and written examinations in the same year, those who obtain not less than 60 per cent of the total number of marks in both parts of the examination taken together shall be placed in the first class, those who obtain not less than 50 per cent of the marks in the second, and the rest in the third class.

Successful candidates obtaining not less than 60 per cent of the marks in paper (iv) or (v) shall be declared to have obtained distinction in that subject.

In the pass lists the names of candidates passing in the first and second classes shall be given in the order of merit; the names of those passing in the third class shall be given in the order of the register numbers.

Candidates successfully completing the written and practical examinations in parts in different years shall be declared to have passed the examination in the third class.

SYLLABUSES.

(1) Theory and Practice of Education.

PART I.

A. GENERAL.—

The need of a theory of education—relation of theory to practice.

The meaning of education—education as the process of adjustment between the individual and the environment—other concepts (preparation, unfoldment and formal discipline).

The aim of education—the nature of an aim—general and specific aims.

The agencies of education—the family, the social community, the church, the state and the school—the evolution and function of the school—the nature of the school environment.

Other agencies operating at the present day—libraries, museums, cinemas and broadcasting.

The function of the teacher—bi-polar and tri-polar relation. The modern views regarding the influence of the personality of the teacher—the scientific and cultural presuppositions of the teacher's work.

B. PSYCHOLOGY IN RELATION TO THE CHILD'S DEVELOPMENT.—

1. *Heredity and Environment and the Significance of Infancy*—

Heredity as a condition of development—the inheritance of physical and mental traits.

Environment (social heredity) as the other condition as an originating and selecting agent—the possibilities of estimating the relative influences of heredity and environment.

The theory of the inheritance of acquired characters and its bearing on education.

The prolongation of human infancy and its sociological and educational significance.

2. *The Physiological basis of Mental Processes*—

The constitution of the nervous system—the localisation of brain functions—the action of the nervous system.

3. *The Mental Processes*—(a) *The Affective and Conative Processes*—

Pleasantness—unpleasantness—aspects of consciousness. Definition of Instinct and Emotion.

Instincts of pugnacity, flight, curiosity, disgust, sex, self-assertion, submission and appeal and constructive, acquisitive and parental instincts.

Imitation and suggestion.

Play; differences between play and work, make-believe, the play spirit in education.

Distinction between instinct and habit—nature and importance of habit—principles of habit-formation.

Volition: inhibition and direction.

Primary and Secondary emotions.

Sentiment—temperament—mood.

The Unconscious: libido, repression, sublimation, complexes, etc.

The growth of group and moral consciousness.

Attention—factors involved, classification, difference between adults and children, pedagogical application.

Relation of attention to interest—nature and kinds of interests—development of interests—classification of interests.

Fatigue—its causes, symptoms, effects and remedial measures.

(b) *The Cognitive Processes—*

Sense—perception and its development—Perception of quality, space and time—training in sense-perception—pre-perception and apperception—the doctrine of apperception.

Memory—classification and favourable conditions—reminiscence and obliviscence—difference between adults and children—economical methods of memorisation.

Learning methods—learning curves—plateau stages.

Transfer of training—the traditional view—experimental result—interference—the limits of transfer.

Imagination—factors involved—individual differences in imagery—growth of imagination—differences between adults and children—training in imagination.

Thinking and reasoning—types of thinking—steps in thinking—concrete and abstract thinking—training to think.

General intelligence—its measurement—The uses of intelligence tests—Principles of test construction.

PART II.

A. SCHOOL HYGIENE—

General conditions of healthy life and growth—characteristics of successive stages of physical development.

School hygiene—school site and buildings—lighting and ventilation—play ground—furniture.

Common ailments of children and how to detect them—infectious diseases.

Detection and avoidance of fatigue and overpressure.

Physical training, gymnastics, drill, games and free-play.

B. SCHOOL ORGANISATION—

The school and its divisions—school departments—size of departments—co-education *vs.* separation—special classes—one teacher schools—the class as a working unit—size of classes—the staff—qualifications and adequacy, etc.—classification of pupils—time-tables for different grades of schools—examinations, external and internal—promotion and its different bases—school records and their proper maintenance.

C. INSTRUCTION—

(a) *Material.*

Criteria for selecting material of instruction.

The elements of the environment and the needs of the various stages of development as determining the curricula for infant, primary and secondary grades of education.

Theories of recapitulation—the psycho-physiological theory and the culture epoch theory.

The scope and sequence of school studies.

Co-ordination, Correlation and Concentration.

(b) *General Principles of Method.*

The nature and general principles of method—teaching and learning processes—logical and psychological methods—the maxims of methodological procedure—the formal steps—types of lessons—inductive, deductive, drill, review, appreciation and how-to-study lessons.

Forms of instruction suited to different ages of pupils and in different subjects—devices of teaching—exposition, illustration, questioning, etc.—the use of blackboard and of other class room apparatus. Lesson plans—Modern individualistic tendencies as exemplified in supervised study, the Gary system, the Project method and the Dalton plan.

D. DISCIPLINE—

Moral instruction and training. The aim of moral training. The chief factors in moral training—(i) corporate life of the school, (ii) personal influence and (iii) non-personal influence.

The corporate life of the school. School community—mutual rights and obligations—schools, societies and other organized groups—school government—school laws, their character and enforcement—juvenile delinquency—rewards and punishments, their nature and kind—pupil self-government and its forms.

Influence—government—discipline—personal influence of the teacher and “the leaders of the groups”. Non-personal influence of the curriculum and other school activities.

Day and Boarding schools and leisure time of pupils.

The relation of the school to other communities with kindred interests.

(2) History of Education and Comparative Study of Educational Systems.

A. INDIAN EDUCATION.

Education during the Company period: early activities in Madras and Calcutta. The part played by the Missionaries and Government. The decision of 1835 and its results. The despatch of Sir Charles Wood in 1854 and the foundation of the modern system. The rise of the Universities.

Education under the Crown: the Education Commission of 1882 and the development of education till 1900. The Indian Universities Commission of 1902. The Calcutta University Commission. The creation of new Universities. Montford reforms and education. Compulsory Education Acts and Educational Control. A general review of the present system of education.

B. EUROPEAN EDUCATION.

The educational aims and ideals of Rousseau, Pestalozzi, Froebel and Herbart—their influence on modern educational theory and practice.

C. A COMPARATIVE STUDY OF EDUCATIONAL SYSTEMS.

The 19th Century and the movement for national education.

A national system an expression of the national genius. Influence of historical, geographical, ethnological, political and economic factors. The aim of a national system of education.

The national systems of education in England. United States of America, Germany and Japan, with reference to the administrative arrangements—local and central control—organisation of education and types of Schools, elementary, secondary, continuation, vocational and special schools for boys and girls. Provision for the training of teachers for elementary and secondary schools. Child welfare movements, such as medical inspection, feeding of necessitous children, movement for playgrounds, open-air schools, sanatoria, etc.

Tendencies of post-war education.

(a) *Text-Books*—

(1) *Comparative Education* by Kandel.

(2) *History of Indian Education* by B. Somasundararao.

(b) *Book for reference*—

The Principles of Educational Policy by Nicholas A. Hans.

(3) Methods Appropriate to the Teaching of English.

I. LANGUAGE.—Thought and language. Language an analysis of experience and the product of speech; not strictly logical; evocative and symbolic. Language and speech. The word, the unit of language, the sentence, the unit of speech. The active and passive aspects of language study. First and second languages; the extent to which the first hinders and helps acquisition of the latter.

II. ENGLISH.—The position of English in India. The bilingual problem, English a medium (1) of instruction and (2) of expression. The practical and cultural value of English. Colloquial and literary English.

III. METHODS OF TEACHING.—(1) The translation or grammatical method, aiming at a comparative study of grammatical structure, through reading, without providing occasions for the natural use of language; repetition rather than translation the most effective means for the learning of idiom, the translation method, with its appeal to reason, the adult's rather than the school-boy's approach to the study of language.

(2) The "reform" or realistic methods: the natural, the oral, the active, and the direct methods the direct method and its many modifications, its aims and main principles, and its psychological basis the inhibition of the mother tongue as a check to cross-association; the direct method, right in principle, wrong in emphasis.

(3) The "compromise" method, aiming at the development of all aspects of language learning, with a view to achieving practical results; the rational use of the mother tongue as a means of explanation; adequate provision for progress in reading to the extent possible at each stage;

progressive practice in speech, though not always in advance of reading ; the suitable grading of written work, and the practical teaching of grammar therewith.

IV, ORAL WORK.—Its prominence in the initial stages ; the vitalizing force of reading throughout the course, though gradually outstripped by it.

The place and value of phonetics in all oral work to teacher and pupil, Ear training and phonetic drill. The speech sounds of English ; a detailed study of their production, and comparison with Indian speech sounds.

The use of phonetic symbols and apparatus. The value of phonetic texts for teacher and pupil. An elementary study of intonation. Rhyme, rhythm, quantity and metre.

Conversation : conventional and natural ; to precede reading. The importance of repetition. Subjects for conversation : objects, persons, actions, pictures, stories, dialogues. Picture or object talks as a device for preventing the undue intervention of the mother-tongue, for promoting fluency, and for covering much ground in a shorter space of time. The place and value of substitution tables.

V. THE TEXT.—(a) *Oral Reading*.—The initial stages : the alphabetic, the phonic, the look-and-say, the sentence and electric methods. Devices for directing attention to the content of reading. Reading in its elocutionary aspect : pronunciation, phrasing, intonation, stress, speed.

(b) *Silent Reading*.—Its place and importance ; an aid to language acquisition. How to develop skill in rapid reading.

(c) *The Content of Reading*.—Methods of explanation ; use of objects, actions, gestures, and pictures ; the apperceptive principle and the mother-tongue in explanation. *Realien* (customs, society, institutions, etc.) ; how gradually to introduce.

(d) *Prose*—(1) *The text for intensive Study* : The centre of instruction in intelligent reading and the study and the use of language ; the extension of vocabulary ; drill in word and phrase ; the extent to which digression is desirable. Sentence and paragraph study. Purpose and tone in writing. Diction and the choice and use of words : style ; common literary forms. Types of exercises for oral and written work at all stages of school work.

(2) *The Text for Extensive Study* : Mainly for comprehension ; the chief aim, the creation of interest in books by rapid silent reading developed from oral reading, Interest and vocabulary control ; complexity of sentence structure no great hindrance to comprehension. Exercises in oral and written to test comprehension primarily. The formation and use of class libraries.

(e) *Poetry*.—Virtually another language ; new word order and diction (including figurative usage) rhyme and rhythm, and more often than not a foreign background. Types of verse, Mood more important than meaning, Visualization an aid to appreciation. Annotation and paraphrase. Types of oral and written work.

(f) *Recitation*.—Of prose and verse ; dramatic work.

VI. GRAMMAR.—Views regarding the function of grammar. How far grammar aids the learning of a language. The linguistic and the critical sense. Formal and functional grammar. The place of grammar in " reform " methods of language teaching.

The bias of English grammar in the past ; the present tendency. The need for uniformity in grammatical terminology. The real need for the teaching of grammar evident when written work is attempted.

The teaching of grammar largely the teaching of terminology. The most realistic method, the inductive. Grammatical summaries and the framing of rules. Drill exercises. The teaching of grammar in the early and later stages. The structure of the sentence as an aid to punctuation, balance, concord, order, ellipsis and emphasis. The function and form of words ; word order. The framing of syllabuses.

VII. COMPOSITION.—Oral and written. Progress from reproduction to free composition. The text the centre of instruction. Fluency exercises. Picture and object composition : story reproduction ; the descriptive essay—oral and written, preparation essential. The more formal types of written work ; epitome, expansion and paraphrase. The preparation of syllabuses. Correction and valuation of written exercise.

VIII. HANDWRITING.—Cursive and print writing. The importance of blackboard demonstration. The use of copy books. Capitalization, syllabification, indentation, the punctuation of abbreviations, underlining ; purpose and grading of transcription and dictation, Attention to handwriting and arrangement of all kinds of written work ; spelling.

IX. TRANSLATION.—Mainly for purposes of explanation and as a remedial exercise to impress differences in grammatical structure, Translation as an art possible only in the highest class to a limited extent. Systematic exercises in translation correlated with the teaching of grammar.

X. LANGUAGE TESTS. Purpose of tests. Tests for measurement of achievement and for diagnosis of individual defects. The applicability of the new examining technique (covering the mechanical aspects of language instruction). Tests of reading—speed, pronunciations, comprehension. Tests of vocabulary and grammar. Handwriting scales. Composition scales.

XI. THE ORGANIZATION OF ENGLISH TEACHING IN SCHOOLS.—Time-tables and schemes of work. Syllabuses. Notes of lessons. Pictures and class libraries. Literary and debating societies. Library reading and the use of works of reference. The running of school magazines and other forms of team work.

**(4) Methods appropriate to the Teaching of
Optional Subjects.***

(a) ALL SUBJECTS TO YOUNG CHILDREN.

I. Principles and methods of Child Study.

History of Child Education with special reference to Rousseau, Pestalozzi, Froebel and Montessori.

Experimental observations; physiological consideration; the child's instincts.

Stages of child development—study of exceptional children and methods of dealing with them.

Pre-School Tests of Intelligence.

II. A survey of recent experiments in methods of child education.

Theories of play and play methods; importance of play in the development of the child; free and organised play. Consideration of the choice of child's play-things and occupation materials.

III. Self-activity, continuity, connectedness and creativeness as guiding principles in early education.

IV. Sense training; its importance in the teaching of—

- (a) Language, number and space.
- (b) Plant and Animal Life.
- (c) Class singing with special emphasis on rhythm; simple eurhythmics.
- (d) Drawing and handwork.
- (e) Story and dramatisation.

V. Correlation in the teaching of the various subjects, in the framing of syllabuses and time-tables and in the application of the project method.

Books for Consultation:

- Foster and Matteson: Nursery School Procedure.
- Gessell: Pre-school Tests of Intelligence.
- Ballard: Practical Infant Teacher.

* "Note—The question papers on the special subjects shall contain one compulsory question on Notes of lessons with enough choice of subject matter."

(b) MATHEMATICS.**I, NATURE OF MATHEMATICS.**

Subject-matter and methods.

The relation of Mathematics to the applied sciences, logic and economics.

Stages in the development of Mathematics; the experimental, the intuitional, the systematic and the philosophical.

The fundamental concepts of Elementary Mathematics.

II. THE AIMS OF MATHEMATICAL EDUCATION—

Practical, disciplinary, and cultural.

III. HISTORY OF MATHEMATICS—

The value of the history of mathematics. The history of the decimal system, negative, complex and irrational numbers, the function concept and the parallel postulate.

Contribution to the pedagogy of Mathematics by eminent educationists; Pestalozzi, Froebel, Herbart and Montessori.

Modern tendencies in methods of teaching.

IV. PSYCHOLOGY OF SCHOOL MATHEMATICS—

The psychology of drill, the equation and problem solving.

V. METHODS OF TEACHING MATHEMATICS—

The heuristic, laboratory, analytic and synthetic, inductive and deductive and genetic methods.

Logical and psychological methods of development.

Means of securing speed and accuracy.

Oral and written work.

Graphical methods and illustrations.

VI. THE MATHEMATICS CURRICULUM AND THE ORGANIZATION OF SCHOOL MATHEMATICS—

Principles governing the construction of syllabuses and assignments.

The logical and the psychological sequences.

The Concentric and Continuous Systems.

The primary, lower and upper secondary stages.

Specialization and the specialized course.

The teaching of arithmetic, algebra and geometry dealt with separately and in detail with regard to aim, matter and method.

Correlation of Mathematical subjects and of those with the other school subjects.

The Dalton Plan and the Project Method.

Tests and Examinations.

VII. EQUIPMENT FOR THE TEACHING OF MATHEMATICS—

Collection of data for problems.

Notes of lessons.

Vocational Mathematics with reference to local conditions.

Text-books, their place and value.

Mathematical libraries and laboratories.

The elements of statistical methods. General acquaintance with: frequency distributions, histogram and frequency polygon, measures of central tendency, measures of dispersion, standard score and co-efficient to correlation.

Books for Consultation:—

1. The Technique of Teaching Secondary School Mathematics: Earnst R. Breslich (The University of Chicago Press).
2. The Teaching of Elementary Mathematics: J. W. A. Young (Longman's Green & Co).
3. The Teaching of Arithmetic: Lennes (Macmillan & Co).
4. The Teaching of Algebra: T. P. Nunn (Longman's Green & Co).
5. The Teaching of Geometry: D. E. Smith (Macmillan & Co).
6. The History of Mathematics, Vol. I & II: D. E. Smith (Ginn & Co).
7. The Psychology of Arithmetic: Thorndike (Macmillan & Co).
8. The Psychology of Algebra: Thorndike (Macmillan & Co).
9. Fundamental Concepts of Algebra and Geometry: J. W. A. Young (Macmillan & Co).

(c) PHYSICAL SCIENCE.

A. *Introductory.*—

Meaning and genesis of Science; utilitarian and cultural values of the Sciences; aims of teaching Science in the school; three stages in the growth of a Science—observational, heuristic and systematic and their characteristics.

B. *Elementary Science.*—

Place of elementary Science in the high school curriculum; different stages of teaching elementary science with subject matter, aims, and methods appropriate to each stage in relation to the mental equipment and development of the pupils in the various stages of school life.

Object or observation lessons of the primary classes, Nature study lessons of Forms I to III, experimental science course of Form IV, information lessons of Forms V and VI; object and mode of conduct of alternative courses.

Qualifications of the elementary science teacher; principles of organisation of elementary science teaching with a view to secure co-ordination and correlation; importance of maintaining Nature Calendar, school gardens and museums; planning and conducting excursions.

C. Optional Physics and Chemistry.—

Specialisation in Forms V and VI a sequence to elementary science teaching; principles of selection of subject matter and organisation of teaching.

Methods of instruction in the class-room: lectures with demonstrations, verification method, heuristic method and its limitations, logical and psychological orders of development, historical method, projects and team work, individual work and supervised study, class-room teaching as class conferences; judging quality of work in the class-room, equipment of the class-room, home-work for pupils, provision for individual difference; methods of securing co-ordination and correlating with laboratory practice, means of creating and sustaining interest. Importance of laboratory course in high school science, size of laboratory classes and their supervision, systems of laboratory work, nature and number of exercises in a course, quantitative work and treatment of the results.

Laboratory manual, laboratory note books and their correction, provision for backward pupils.

Planning and equipment of a physical and chemical laboratory, design and size of the demonstration table and work benches, light and ventilation, fume cupboards, and utilisation of wall space.

Laboratory arts—work-shop practice, including wood and metal work, glass blowing, photography, making of lantern slides.

Laboratory management, selection of laboratory and demonstration appliances, preparation of indents, care of apparatus, chemical and store-room laboratory registers.

D. General.

Scientific method, inference, analogy, deduction and induction, synthesis, and analysis—their application in the teaching of Science, imagination, hypothesis, requisites of a good hypothesis, theory and law as applied to natural sciences, didacticism and scientific method, testimony and appreciation of authority.

Framing of syllabuses and time-tables, place of text-books, and reference books in high school science, class libraries.

Medium of instruction, oral questioning, written and practical examinations as tests of proficiency, nature of questions and valuation, award of school marks.

(d) NATURAL SCIENCE.

1. *General.*

(a) Scope of Natural Science, its relation to other sciences, aims of teaching Natural science, acquisition of knowledge by discovery methods not merely verification of known facts but finding out by means of experiments, the scientific habit of thinking, the place of deductive reasoning in science. Values of teaching Natural Science, mental, ethical, emotional and practical.

(b) Nature Study of Elementary Natural Science, aims of teaching plant and animal life in the lower forms, training powers of observation, comparison and reasoning, discovery of characteristics of life. In higher forms training of the mind by discovery of laws governing the activities of life, the organism and its environment, recognition of order in nature and understanding of the principles of evolution, acquisition of useful knowledge.

2. *Methods.*

Observation and heuristic methods of teaching, the value of comparison, conducting experiments, individual work and demonstration, record of work, observations and inferences, hypotheses and verification. The Project and Dalton methods. Value of drawing and description. Choice of material, value of living specimens.

3. *Aids to teaching.*

(a) The school garden: how to maintain; value in teaching, study of life histories and other advantages.

(b) School museum and herbarium; their value in teaching, fitting and maintenance, selection of specimens, collection by teacher and by the pupils.

(c) Charts, diagrams and lantern slides: preparation and value in teaching.

(d) Excursions, their educational value, how to conduct excursions.

(e) Text-books: their use and abuse.

4. *Preparation of courses of study.*

The concentric system, general principles underlying schemes of lessons, choice of topics and material, more for training the mind than for information, importance of using objects in the immediate surrounding of the school, imparting of useful information in Human Physiology and Hygiene.

5. *Botany in the S.S.L.C. Course.*

Aims; preparatory to the study of plants as a science, acquisition of knowledge of the external features and functions of the parts of flowering plants, adaptation to external conditions, the principles of classification.

(a) Study of external features; importance of the study of actual specimens, personal observation of the pupils necessary, use of diagrams and description and observation to be guided by the needs for classification.

(b) Study of principles of classification: individuals and species, recognition of species and genera to precede study of families, grouping of species into genera and genera into families, relationship determined more by floral structure.

(c) Study of functions: by observations and experiments, experiments to be carried by pupils, demonstration experiments, how to make pupils carry out experiments, scope of instructions to pupils successful and unsuccessful experiments, observations and inferences, record of experiments.

(d) Adaptations: to be studied in relation to environment, importance of field study, correlation of structure and function, similarity in form as a result of similar conditions.

(e) HISTORY.

I. THE MEANING OF HISTORY—

What History is. What is meant by the philosophy of History.

II. THE SCOPE OF HISTORY—

Economic, social, political and constitutional history. The economic background of history. A plea for a unified social science course. The relation of history to other subjects.

III. THE EDUCATIONAL VALUE OF HISTORY—

(i) *Content*: Comprehension of ethical and cultural ideas.

(ii) *Mental Discipline*: Cultivation of memory, imagination, reason, and judgment.

IV. THE AIMS OF TEACHING HISTORY—

(i) *General*: to make the pupils realize the progressive growth and development of civilization, to create in them the historic and civic sense, and to inculcate a proper use of books and other sources of information.

(ii) *Special*: (1) *In the Lower Classes*—to awaken interest, kindle imagination and foster memory. (2) *In the Higher Classes*—to stimulate the critical faculty and train the pupils in individual and community work.

V. THE SUBJECT-MATTER OF HISTORY—

(i) *Its Selection* : Local, Indian, European, and World History ; Ancient, Mediaeval, Modern, and Recent History.

(ii) *Organization* : Outlines and periods.

VI. THE METHODS OF TEACHING HISTORY—

(i) *The Early Stage*.—The oral lesson—the Culture Epoch theory—chronological treatment—the biographical approach—the Great man theory—the Narrative method—vitalizing the past by means of verbal illustrations and pictures—dramatization—drill.

(ii) *The Later Stage*.—(1) *The Text-book lesson*—the Continuous vs. the Concentric system—topical treatment—concrete illustrations—correlation with Civics, Geography and Literature (epic, ballad, poetry, romance and novel)—the Inductive method—the operation of cause and effect—the Spiral plan—special lectures—teaching History backwards. (2) *Individual Work*—Learning by doing—home lessons—historical exercises—library work—collateral reading—the study of documents and other sources—the Dalton Plan—the solution of problems—the Townsend Warner method—the “Research” method—note making—essay writing—the preparation of maps, plans, and sketches—the construction of graphs, time-lines and charts. (3) *Community Work*—Civics taught through school organizations—undertaking excursions—the execution of projects—the conduct of debates.

VII. THE EQUIPMENT OF THE HISTORY LABORATORY—

Furniture, library and museum—maps, pictures and charts—the camera, magic lantern, stereopticon, stereoscope, epidiascope, cinema, gramophone and radio.

VIII. THE ORGANIZATION OF TEACHING WORK IN HISTORY—

The basis and construction of a syllabus—teaching notes and notes of lessons—supervision by the senior assistant—New Type and Standardized Tests—the examination system—Teacher’s Conferences for the consideration of syllabuses and methods.

The vernacular as the medium of instruction.

Books for Consultation—

1. The Teaching of History (issued by the English Board of Education).
2. The Teaching of History and Civics by Bourne (Longmans).
3. The Teaching of History (issued by the Cambridge University Press)

4. Memorandum on the Teaching of History (issued by the Cambridge University Press).
5. History and its Place in Education by Findlay (University of London Press).
6. The Learning of History by Fifth (Kegau Paul).
7. The Teaching of History by Hasluck (Cambridge University Press).
8. How to Study and Teach History by Hinsdale (Appleton).
9. The Teaching of History by Jarvis (Clarendon Press).
10. Studies in the Teaching of History by Keatinge (Black).
11. The Teaching of History by Klapper (Appleton).
12. The Teaching of History (New Educator's Library).

(f) GEOGRAPHY.

1. *The Nature of Modern Geography.*—

A brief historical sketch of its growth and of its pedagogy.

2. *The subject matter of Geography.*—

Its scope regarded as a school subject. The value and place in the course of mathematical, physical, economic, historical and regional (including home) geography. The necessity for selection and the principles on which this should be based with special reference to the type of school (elementary or secondary and the area in which it is situated (rural or urban).

The possibilities of correlation with other subjects.

3. *The Value of Geographical Study.*—

(a) *Practical*—As preparation for every day life—individual and civic

(b) *Educational* (i.e. in the school:— As an 'approach' subject in the early stages, and as a 'correlating' and 'outlook' subject in the later stages.

(c) *Disciplinary*:—Mental training—processes involved in the scientific method of study: observation, classification, generalization, comparison.

(d) *Culture*:—Breadth of outlook, depth of insight, and sympathy with lives of distant peoples, the world's workers.

4. *The aims of Teaching.*—

(a) To develop a geographic outlook, and create an intelligent interest in the modern world.

(b) To secure a dexterity in the use of geographical material—maps, blue-books, etc.

5. *Methods of Teaching.*—

(a) The value of oral work, pictures, handwork and dramatization in the early stages.

(b) The value and methods of teaching the following subjects:—
Maps and map-reading with special reference to methods of showing relief, drainage, climate, communications, human occupations, and distribution of population.

Map-making: The use of chain, prismatic compass and plane-table in school surveying.

The use of a simple form of level in practical contouring.

The methods of recording temperature, pressure and rainfall data obtainable in school.

The possibilities of collecting local data with regard to climate and crop statistics.

The sources of information regarding industries, trade, crops, population, etc.

The method and value of teaching graphical representation of such information in maps, curves and diagrams.

(c) The value and possibilities of out-door work in the different stages of school. Excursions, Laboratory methods.

(d) Class Work:—Oral teaching: its importance and limitation—types of lessons—causal relation, and place and value of geographical explanation—questioning to test memory and provoke thought—illustrations, maps, graphs, charts, pictures and models.

(e) Individual work:

(i) Use of text-books—characteristics of good text-books.

(ii) Collateral reading—its purpose—assignments and guidance—sources of geographical information.

(iii) Maintenance of note-books etc.

(iv) Problems and exercise—The project method.

(f) Team work: Its value and possibilities.

6. *Organization of Courses of Study.*—

Construction of syllabuses, schemes of lessons, formal notes of lessons teaching notes and lesson plans. Preparation of assignment.

7. *The Medium of Instruction in Indian Schools.*—

Initial difficulties in the use of the mother tongue, and how to surmount them : technical words, text-books, maps and atlases.

8. *Examination.*—

Oral and written. Their aims and values, criticism of present methods, recent methods of testing.

9. *Geography Room.*—

Necessity for a separate room, its plan, geographical equipment and its use : minimum essentials.

10. *Bibliography.*—

Standard and recent books, maps, atlases etc.

N.B.—Candidates will be expected to give satisfactory evidence that they have had experience in teaching the subject, and to this end compulsory questions on lesson notes, syllabuses and practical work will be set.

(g) ONE LANGUAGE OTHER THAN ENGLISH.

(i) SANSKRIT :

(a) *General: Preliminary.*—

Objects of teaching Sanskrit. The standard to be aimed at in Secondary Schools and Pre-collegiate Sanskrit Schools. The position of Sanskrit in India ; its cultural and practical value. The inter-relations of Sanskrit and Indian Vernaculars. Comparison of Sanskrit and English, with particular reference to their grammar and structure. Practical and theoretical study of Sanskrit.

(b) *Methods of Teaching.*—

The translation method and the direct method as applied to Sanskrit study ; traditional methods of Sanskrit study, the merits and defects, the external and internal difficulties of the Sanskrit language and how best to overcome them.

(c) *The Early Stages of Sanskrit Teaching.*—

The sound of Sanskrit, detailed study of their production, the organic and acoustic methods of study. Sanskrit sounds, The means of teaching

them to pupils. The teaching of Sanskrit hand-writing ; place of dictation and transcription ; translation. Reading and recitation. The Sanskrit text as the centre of instruction ; manner of exposition, means of extending the Sanskrit vocabulary. Inductive methods of Sanskrit teaching, Sanskrit grammar. The use of Sanskrit Kosas.

(d) *The Later Stages.*

The choice of Sanskrit texts. Lines of development in teaching the various aspects of Indian life. Correlation with the geography of Indian civilization and culture. Study of diction in Sanskrit texts ; types of Sanskrit composition. Sentence structure in Sanskrit. Paraphrase and translation with reference to Sanskrit. The Historical and Comparative Method of studying the Sanskrit language and literature. Study of Organization of Sanskrit teaching in English Schools ; consideration of time-tables ; formation of class libraries and general libraries.

(ii) TELUGU :

I. *General.*—

(1) The importance of the mother-tongue ; position of the vernacular in a scheme of general education ; vernacular as the medium of instruction ; relative importance of the mother-tongue and English as media of instruction ; use of the mother-tongue in the various stages of education.

(2) History of vernacular education in India ; the village-school of the old type—intensive as opposed to the extensive study of the mother-tongue ; study of the mother-tongue in schools under the control of the Educational Department ; present position of the vernaculars in the various stages of education.

(3) Methods of teaching the mother-tongue ; the effect of teaching English side by side with the vernacular ; influence of English on the pronunciation, dictation and expression of the mother-tongue.

(4) Grammar.—Its place in the reformed methods of teaching modern languages ; the inductive method of teaching grammar ; correlation with text-books ; formal and practical grammar ; function and form of words ; word-order ; sentence structure ; analysis of sentences ; framing of grammatical rules by the inductive method ; grammar drill ; syllabuses of grammar for general guidance ; place of formal grammar in the early stages ; relative importance of instruction in grammar and drill in expression in the use of the mother-tongue.

II. *Telugu in the Primary stage.*—

(1) Rural and urban schools ; boys and girls schools ; question of differentiation of courses of study.

(2) Story-telling and reproduction; nursery fable; fairy tales puranic stories and their importance in the successive years of the primary course.

(3) Songs and verses; nursery rhymes; comical ballads; memorization of easy verses.

(4) Writing—Circles as the basis of the Telugu alphabet; methods of teaching the Telugu alphabet; the traditional method; modern methods of teaching the alphabet; the 'gudinthamu' and the method of teaching it; phonetics of the Telugu language: defects of the Telugu alphabet and the 'gudinthamu' and methods of reform.

(5) Reading Knowledge of phonetics essential for correct pronunciation; defects of children—acoustic and organic methods of rectifying them; ordinary inability of children to pronounce the aspirates; distinction between *s*, *sh*, and *s'*; *k* pronounced as *t*; *r* as *l*; distinction between *c* and *ts*; *r* and *r'* and so on.

(6) Individual and group recitation.

(7) Text books—At what stage to be introduced; text-books as the books of instruction in general knowledge and as a means of enriching the pupils' vocabulary; literary standard of the text-book; nature of text-books for rural and urban areas and for boys' and girls' schools.

(8) Picture-reading and composition; word and phrase book; composition exercises and team work in composition.

III. *Telugu in the Secondary stage.*—

(i) Pre-High School.

(1) Story-telling and reproduction, puranic and historical wonder tales of adventure and heroism; stories of invention and discovery; lives of great men.

(2) Songs and verses memorisation of easy portions of Telugu literature; individual and group recitation.

(3) Reading and writing—reading aloud; copy-writing; transcription.

(4) Text books—Prose and poetry; their varieties; correlation of text-books with the other subjects of school instruction.

(5) Methods appropriate to the teaching of prose and poetry, detailed and non-detailed.

(6) Picture-reading; composition—oral and written; nature of subjects for composition; methods of correcting composition exercises.

(ii) High School.

(1) Text-books : nature of material ; methods of teaching ; memorisation and recitation ; dramatization.

(2) Precis-writing and expansion of ideas ; composition—oral and written ; appreciation of literature ; training to speak on prescribed subjects.

CHAPTER XLVII. DEGREE OF MASTER OF EDUCATION

(*Regulations*)

1. The Degree of Master of Education may be conferred On whom conferred.
upon—

(1) persons who have passed the B. Ed. Degree Examination of this University and who are of not less than two years' standing ;

(2) persons who are residents of or domiciled in the University area and who have passed an examination accepted by the Syndicate as equivalent to the B. Ed. Degree Examination of this University and who are of not less than two years' standing.

If any question arises as to whether a person coming under clause (2) above, is a resident of or domiciled in the University area or not, the question shall be decided by the Syndicate and its decision shall be final, provided that a candidate will not be considered as domiciled unless he has lived continuously within the University area for a period of not less than 2 years immediately preceding the date of submission of the thesis.

2. The M. Ed. Degree shall only be awarded to candidates who Awarded for a thesis.
have submitted as a thesis work forming a distinct contribution to the advancement of learning. Each candidate shall state in his application the subject or subjects within the purview of the Regulations for the Degree of Bachelor of Education upon a special knowledge of which he rests his application for M. Ed. Degree and shall with the application transmit three copies, printed or typewritten, of the thesis.

The application and the thesis should be forwarded so as to reach the Registrar between 1st June and 1st July of any year.

3. The thesis must comply with the following conditions— Conditions of thesis.

(1) it must be satisfactory in respect of literary representation as well as in other respects and should be in a form suitable for publication ;

(2) the candidate shall indicate generally in his preface to his thesis and specially in notes, the sources from which his information is taken, the extent to which he has availed himself

of the work of others and the portions of the thesis which he claims as his original work.

(3) he shall further state whether his research has been conducted independently, under advice or in co-operation and in what respects his investigations or researches appear to him to tend to the advancement of learning.

**Examination
of thesis.**

4. The thesis shall be referred to three independent judges appointed by the Syndicate who shall examine the thesis, who may examine the candidate orally if they so desire and who shall report individually whether the candidate's work is of sufficient merit to deserve the degree.

**Result of
Examination.**

If the Syndicate, upon the independent reports of the judges, consider the candidate worthy of the degree of Master of Education it shall cause his name to be published with the subject of his thesis.

5. Every candidate shall be at liberty to publish his thesis. The thesis of any successful candidate may be published by the University with the inscription—"Thesis approved for the Degree of Master of Education in the Andhra University".

CHAPTER XLVIII.

DEGREE OF BACHELOR OF MEDICINE AND SURGERY

(Regulations).

1. Candidates for the degree of Bachelor of Medicine and Surgery shall be required—

- (i) to have completed the age of seventeen years on or before the date of admission to a College of Medicine for registration as medical students, unless specially exempted by the Syndicate from the operation of this rule ; Age limit for admission to College.
- (ii) to have passed the Intermediate Examination in Arts and Science of this University, taking Physics and Chemistry as two of the three optional subjects under Part III of the Intermediate examination, or an examination accepted by the Syndicate as equivalent thereto*; provided however that students who commenced their Intermediate courses of study prior to July 1930 may be permitted to undergo the M. B. B. S. Degree course subject to the condition that they have passed the Intermediate examination in any three of the following subjects under Part III:—Physics, Chemistry, Mathematics, Botany and Zoology ; Preliminary qualifications.
- (iii) to have subsequently studied for a period of six months in a college affiliated to or recognised by the University, the subjects of Inorganic Chemistry, Physics and Biology, and passed the Pre-Registration Examination of this University or an Examination recognised by the General Medical Council of Great Britain and Ireland and accepted by the Syndicate as equivalent thereto ; Pre-Registration Examination.
- (iv) to have, subsequent to passing the Pre-Registration Examination, been engaged for not less than five Five years' study at College.

* *Vide* foot-note on page 814.

years in professional study in a College of Medicine affiliated to or recognised by the University, provided that not less than two academic years or six terms of medical study, immediately preceding the Final M. B. & B. S. Examination, be spent in attendance at the Andhra University on courses of instruction in the subjects of the curriculum.

Terms.

- (v) The academic year shall consist of three terms, spring, autumn and winter. The spring term will extend from 1st January to 31st March, the autumn term from 1st July to 30th September, and the winter term from 1st October to 31st December.

Certificate of further study.

- (vi) In the case of the examinations other than the Final, candidates who fail at the examination or having applied for admission do not appear for the examination or having obtained the prescribed certificate do not apply for admission to the examination although qualified to do so shall be required to produce a certificate of further study for at least one term before appearing for the next succeeding examination. No candidate who failed in any one of the clinical subjects of the Final M. B. B. S., shall be permitted to appear again for the examination unless he puts in a further course of Hospital practice in the subject, for at least one term.

Examinations twice a year.

- (vii) The Examinations shall be held twice a year in the months of April and December.

Pre-Registration Examination.

Course of Study and Examination.

2. A candidate for the examination shall undergo a course of study extending over a period of six months, and shall be examined in—

- | | | |
|-----|--|-----|
| | (a) Inorganic Chemistry (according to a syllabus), | |
| | (b) Physics | Do. |
| and | (c) Biology | Do. |

The examination in each subject shall be written, practical and oral.

3. No candidate shall be admitted to the examination unless he has produced satisfactory evidence of having complied with the provisions contained in clause (ii) of Regulation 1 of this Chapter, and has produced the prescribed certificates.

Preliminary qualifications.

4. Candidates who have passed the Physical or Natural Science group of the B. A., B. Sc., or B. A. (Honours), B. Sc. (Honours) Degree Examination of this University or of any other Indian University (where practical courses and examinations are held), accepted by the Syndicate as equivalent thereto, shall not however, be required to produce the prescribed certificates for, or to pass in any of the subjects in which they have passed at the Degree Examination. Candidates who have passed the examination with either Botany or Zoology as one of the optional subjects shall not be exempted from examination in Biology. Such candidates shall, however, be required to pay the prescribed fee for the whole Examination.

Candidates with B.A., B.Sc., etc. Passing in Science group eligible for exemption.

5. A candidate for the examination shall be declared to have passed the examination if he obtains not less than one-half of the marks in the written, and not less than one-half of the marks in the practical and oral taken together in each of the subjects, Inorganic Chemistry, Physics and Biology. All other candidates shall be deemed to have failed in the examination.

Marks qualifying for a pass.

6. Candidates for the examination who fail, but obtain passing marks in any subject shall be exempted from re-examination in that subject.

Conditions of obtaining exemption.

7. A candidate who after qualifying for admission to the Examination applies therefor and fails four times shall not be permitted to take the Pre-Registration Examination again. If a candidate, whose name has been registered for the Examination, absents himself therefrom, he shall be deemed to have failed in the Examination.

Failure.

Classification
of successful
candidates.

8. Candidates who pass the whole examination on the first occasion of appearing therefor shall be ranked in the order of proficiency as determined by the total number of marks obtained by each and shall be arranged in two classes; the first consisting of those who have obtained not less than seventy per cent of the aggregate number of marks, the second consisting of all the others.

Candidates who pass in the first class and who obtain not less than seventy-five per cent of the marks in any subject shall be declared to have passed with distinction in that subject.

Candidates who pass the whole examination at a subsequent appearance shall be ranked only in the second class.

All candidates who pass the examination subject by subject shall be ranked in the second class separately.

First M. B. & B. S. Examination

Course of study
and Examination.

9. A candidate for the Examination shall undergo a course of study extending over a period of one academic year for Part I, Organic Chemistry and two academic years for Part II, Anatomy including elements of Human Embryology and Physiology including Bio-Chemistry after passing the Pre-Registration Examination.

A candidate for the Examination shall be examined in Part I—(a) Organic Chemistry (according to a syllabus),

Part II—(b) Anatomy, including Elements of Human Embryology and

(c) Physiology including Bio-Chemistry (according to a syllabus).

The examination in each subject shall be written, practical and oral.

Conditions of
admission to
examination,

10 Candidates may present themselves for the whole Examination at one time, or may take the examination in two Parts.

11. No candidate shall be admitted to Part I, Part II or whole of the examination unless he has passed the Pre-Registration Examination of this University, or an examination accepted by the Syndicate as equivalent thereto* and has produced the prescribed certificates.

Candidates who have passed the B.A. (Hons.), or B.Sc. (Hons.) or M.A. or M.Sc. Degree Examination with Chemistry as the main subject or Organic Chemistry as the special subject in the cases of degrees obtained by research, shall not, however, be required to produce the prescribed certificates of attendance for or to pass in Organic Chemistry : a similar concession shall be shown in the case of those who have passed the B.A. or B.Sc. Degree Examination with Chemistry as the main subject provided they have obtained not less than 50 per cent of the marks prescribed for Organic Chemistry. Applications for exemptions shall be made in each case.

12. A candidate for the examination shall be declared to have passed in Part I of the Examination if he obtains in Organic Chemistry not less than one-half of the marks in the written and not less than one-half of the marks in the practical and oral taken together, and to have passed Part II of the examination if he obtains not less than one-half of the marks in the written part of each subject, Anatomy (including Elements of Human Embryology), and Physiology, (including Bio-Chemistry) respectively, and not less than one-half of the marks in the practical and oral taken together in each subject. All other candidates shall be deemed to have failed in the examination. Marks qualify-
ing for a pass.

13. Candidates for the Examination who fail but obtain passing marks in any subject shall be exempted from re-examination in that subject. Exemption in
subjects passed.

14. Candidates who pass Parts I and II of the examination on the first occasion of appearing therefor shall be ranked in the order of proficiency as determined by the total number of marks obtained by Classification
of successful
candidates.

* The following examination has been recognised by the Academic Council in accordance with Sec. 88 (1) of the Act, as equivalent to the Pre-Registration Examination of the Andhra University:—Pre-Registration Examination of the Sheffield University.

Final M.B. & B.S. Examination

Candidates permitted to take the examination in whole or in parts.

21. A candidate for the examination shall undergo a course of study extending over a period of one academic year for Forensic Medicine and three academic years for Medicine, Surgery and Obstetrics and Gynæcology taken concurrently and subsequent to passing the First M.B. & B.S. Examination and shall be examined in—

Part I—

(a) Forensic Medicine.

Part II—

(b) Medicine,

(c) Surgery,

(d) Obstetrics and Gynæcology.

Medicine;
course of study
and Examination.

22. The course in Medicine shall include :

- (a) an appointment for nine months as Clinical Clerk in the medical wards of a recognised hospital of which at least two months shall be in the final year; and
- (b) an appointment for three months as Clinical Clerk in the medical out-patient departments of a recognised hospital.

23. Every candidate for the M.B. & B.S. degree shall also attend recognised courses of instruction in the following subjects :—

- (i) A course of systematic instruction in the principles and practice of medicine ;
- (ii) Instruction in applied Anatomy and Physiology in Clinical Pathology ;
- (iii) Infectious Diseases—with attendance as Clinical Clerk at a recognised hospital on two days in the week for a period of three months ;
- (iv) Mental Diseases—with attendance as Clinical Clerk at a recognised Mental Hospital on one day in the week for a period of three months ;

- (v) Tuberculosis—with attendance as Clinical Clerk at a Tuberculosis Hospital on one day in the week for a period of three months ;
- (vi) Medical Therapeutics ;
- (vii) Dermatology—with attendance at the special departments on two days in the week for a period of three months ;
- (viii) Instruction in Vaccination by qualified Health Officer .
- (ix) Diseases of children.

24. The examination in Medicine may include questions on the above mentioned subjects, but separate examinations in those subjects will not be held.

25. The course in Surgery shall include—

- (a) an appointment for nine months as Surgical Dresser in the surgical wards of a recognised hospital of which at least two months shall be in the final year ; and Surgery; course of study and examination.
- (b) an appointment for three months as Surgical Dresser in the out-patient department of a recognised hospital.

26. Every candidate for the M.B. & B.S. Degree shall also attend recognised courses of instruction in the following subjects :—

- (i) A course of systematic instruction in the principles and practice of surgery ;
- (ii) Instruction in applied Anatomy and Physiology and Clinical Pathology ;
- (iii) Oto-Rhino-Laryngology—with attendance as a clinical clerk at a recognised clinic on three days in the week for a period of three months ;
- (iv) Orthopaedics—two days in the week for a period of three months ;
- (v) Administration of anaesthetics ;

Final M.B. & B.S. Examination

Candidates permitted to take the examination in whole or in parts.

21. A candidate for the examination shall undergo a course of study extending over a period of one academic year for Forensic Medicine and three academic years for Medicine, Surgery and Obstetrics and Gynæcology taken concurrently and subsequent to passing the First M.B. & B.S. Examination and shall be examined in—

Part I—

(a) Forensic Medicine.

Part II—

(b) Medicine,

(c) Surgery,

(d) Obstetrics and Gynæcology.

Medicine;
course of study
and Examination.

22. The course in Medicine shall include :

- (a) an appointment for nine months as Clinical Clerk in the medical wards of a recognised hospital of which at least two months shall be in the final year ; and
- (b) an appointment for three months as Clinical Clerk in the medical out-patient departments of a recognised hospital.

23. Every candidate for the M.B. & B.S. degree shall also attend recognised courses of instruction in the following subjects :—

- (i) A course of systematic instruction in the principles and practice of medicine ;
- (ii) Instruction in applied Anatomy and Physiology in Clinical Pathology ;
- (iii) Infectious Diseases—with attendance as Clinical Clerk at a recognised hospital on two days in the week for a period of three months ;
- (iv) Mental Diseases—with attendance as Clinical Clerk at a recognised Mental Hospital on one day in the week for a period of three months ;

- (v) Tuberculosis—with attendance as Clinical Clerk at a Tuberculosis Hospital on one day in the week for a period of three months ;
- (vi) Medical Therapeutics ;
- (vii) Dermatology—with attendance at the special departments on two days in the week for a period of three months ;
- (viii) Instruction in Vaccination by qualified Health Officer .
- (ix) Diseases of children.

24. The examination in Medicine may include questions on the above mentioned subjects, but separate examinations in those subjects will not be held.

25. The course in Surgery shall include—

- (a) an appointment for nine months as Surgical Dresser in the surgical wards of a recognised hospital of which at least two months shall be in the final year ; and
- (b) an appointment for three months as Surgical Dresser in the out-patient department of a recognised hospital.

Surgery,[†]
course of
study and
examination.

26. Every candidate for the M.B. & B.S. Degree shall also attend recognised courses of instruction in the following subjects :—

- (i) A course of systematic instruction in the principles and practice of surgery ;
- (ii) Instruction in applied Anatomy and Physiology and Clinical Pathology ;
- (iii) Oto-Rhino-Loryngology—with attendance as a clinical clerk at a recognised clinic on three days in the week for a period of three months ;
- (iv) Orthopaedics—two days in the week for a period of three months ;
- (v) Administration of anaesthetics ;

- (vi) Operative Surgery ;
- (vii) Radiology with attendance at an X-ray institute on three days in the week for one month ;
- (viii) Venereal Diseases—with attendance at a Venereal clinic for two days in the week for a period of three months.

27. The Examination in Surgery may include questions on the above-mentioned subjects, but separate examinations in these subjects will not be held.

**Obstetrics and
Gynæcology:
course of
study and
examination.**

28. The course in Obstetrics and Gynæcology shall include :—

- (a) an appointment as Clinical Clerk at an ante-natal clinic and maternity wards of lying-in-hospital for a period of three months, and the personal conduct of twenty cases of labour of which five at least shall be under supervision ; and
- (b) an appointment as Clinical Clerk in the Gynæcological wards and out-patient department of a recognised hospital for a period of three months.

29. Every candidate for the M.B. & B.S. Degree shall also attend recognised courses of instruction in the following subjects :—

- (a) Instruction during a period of at least two terms comprising courses of systematic instruction in the principles and practice of Obstetrics and Gynæcology.
- (b) Lectures or demonstrations in clinical Obstetrics and Gynæcology, and attendance on in-patient and out-patient Gynæcological practice.

30. Every candidate for the M.B. & B.S. Degree before commencing the study of practical midwifery shall have held the appointments of Clinical Medical Clerk and Surgical Dresser and shall have attended a course of lectures on Medicine, Surgery and Obstetrics and Gynæcology.

31. A certificate that the candidate has conducted the above mentioned twenty cases of labour should be given by a member of the staff of lying-in-hospital or of a maternity charity hospital as may be recognised by the University from time to time after consulting the Board of Studies in Medicine.

32. Candidates may present themselves for the whole examination at one time or may take the examination in two parts.

33. The Examination in each subject shall be written and oral Examination in the case of Forensic Medicine; written, clinical and oral in the case each subject. of Medicine; written, clinical, practical and oral in the case of Surgery and Obstetrics and Gynæcology.

34. (a) No candidate shall be admitted to Part I of the examination unless— Admission to examination

(1) he has previously passed the Second M.B. & B.S. examination or an examination accepted by the Syndicate as equivalent thereto; and

(2) he has produced the prescribed certificates; and

(b) no candidate shall be admitted to Part II of the examination unless—

(1) he has passed the First M.B. & B.S. examination or an examination accepted by the Syndicate as equivalent thereto not less than three academic years previously;

*(2) he has passed the Second M.B. & B.S. examination or an examination accepted by the Syndicate as equivalent thereto not less than one year previously.

(3) he has been engaged in Medical Studies at the Andhra University for not less than two academic years immediately preceding the examination; and

(4) he has produced the prescribed certificates.

Marks qualify-
ing for a pass.

35. A candidate for the examination shall be declared to have passed the examination if he obtains not less than one-half of the marks in the written part of each of the subjects, Forensic Medicine, Medicine, Surgery and Obstetrics and Gynæcology; not less than one-half of the marks in Oral Forensic Medicine, and not less than one-half of the marks in Clinical and Oral Medicine taken together, not less than one-half of the marks in (1) Clinical Surgery, (2) Operative and Oral Surgery taken together, and not less than one-half of the marks in Clinical, Practical and Oral Obstetrics and Gynæcology taken together. All other candidates shall be deemed to have failed in the examination.

Exemption
from re-
examination

36. Candidates for the examination who fail but obtain passing marks in any subject, shall be exempted from re-examination in that subject provided that the whole examination (Parts I and II) shall be completed within a period of two years (i.e. 4 chances) from the date of the first appearance.

Candidates who fail to complete the whole examination within the above limit of two years shall be required to appear again for all the subjects (in Parts I and II):

Provided that candidates who have already exceeded the time limit of two years shall be permitted to complete the examination under the old regulation up to and including the March-April examinations of 1938 and that thereafter they shall, if they still fail, be required to appear again for all the subjects (in Parts I and II).

Classification
of successful
candidates.

37. Candidates who pass Part I and II of the examination on the first occasion of appearing therefor shall be ranked in the order of proficiency, as determined by the total number of marks obtained by each in both parts and shall be arranged in two classes; the consisting of those who have obtained not less than seventy per cent of the aggregate number of marks, the second consisting of all the others.

Candidates who pass in the first class and who obtain not less than seventy-five per cent of the marks in any subject shall be deemed to have passed with distinction in that subject.

Candidates who pass Part I or II of the Examination at a subsequent appearance shall be ranked only in the second class.

All candidates who pass the examination subject by subject shall be ranked in the second class separately.

38. Transitory Regulations—

(1) The Regulations in force prior to 1st July 1926 will continue to be in force for the benefit of candidates who commenced their course under those regulations.

(2) Candidates, who had completed their course in Pharmacology before June 1929, but did not appear for the Examination in June 1929, shall be permitted to appear for the examination without further certificates of attendance at College.

(3) Candidates for the M.B. & B.S. Degree who had qualified for the L.M. & S. Degree after a five years' course, shall be exempted from re-examination in the subject in which they had obtained 50 per cent of the marks and from the production of the additional attendance certificates in other subjects.

(4) The Regulations printed in Vol. I of the Madras University Calendar for 1925-26, relating to courses of study and examination for the L. M. & S. Degree shall remain in force for the benefit of candidates who have entered upon their courses of study prior to July 1926, subject to such alteration in the curricula of studies corresponding to those made in the Regulations for the M.B. & B.S. Degree in conformity with the recommendations of the General Medical Council of Great Britain in regard to (1) the intervention of three years between the date of passing professional examination in Anatomy and Physiology and that of admission to the Final examination in Medicine, Surgery and Midwifery and (2) instruction in Bio-Chemistry and Acute Infectious Diseases.

SYLLABUSES.

Pre-Registration Examination.

INORGANIC CHEMISTRY.

Candidates will be expected to understand the elements of Chemistry included in the syllabus for the Chemistry part of the Intermediate Examination, and in addition to have an elementary knowledge of the following subjects :—

The general properties of solids, liquids and gases.

The gas laws and kinetic theory of gases.

The general properties of solutions, including osmotic pressure and the methods of measuring it both direct and indirect.

Electrolysis and the theory of ionic dissociation, including the theory of hydrogen-ion concentration and its measurement.

The law of mass action and its application to chemical equilibria.

Colloids, including the effect of surface on chemical actions.

Catalysis and the general conditions of catalytic actions.

Some elementary ideas on the constitution of matter, the classification of the elements and radio-activity.

Practical Examination.

Candidates will be expected—

to be familiar with the ordinary materials and apparatus used in laboratories, and with such operations as filtration, solution, distillation, drying, precipitation, crystallisation, and extraction with immiscible solvents;

to be familiar with the use of a chemical balance and the use and calibration of graduated flasks, pipettes and burettes;

to do easy preparations of inorganic substances;

to purify or to make an intelligent attempt to purify a known substance;

to perform simple quantitative exercises, such as the determination of melting points, boiling points, densities, and the determination of the amount of water in a substance or of the amount of ash left on the ignition of a substance;

to perform any easy gravimetric estimation, for example, a sulphate as BaSO_4 carbon dioxide by direct weighing, chloride-ion as AgCl , calcium as CaO ;

to prepare and use in simple volumetric estimations standard solutions of acids, alkalis, permanganate, iodine, thiosulphate and silver nitrate;

to determine the approximate hydrogen-ion concentration of a given solution by means of indicators;

to attack with intelligence any simple chemical problem such, for example, as the separation of two known substances and the preparation of a standard solution of a substance that cannot be weighed.

The examiners will use their discretion as to whether or not books may be allowed for the whole or part of the practical examination.

PHYSICS

The whole syllabus is to be treated in an elementary manner and with reference to the subsequent work of the student. The treatment will be mostly experimental and in no case will Mathematics be required beyond elementary algebra and geometry.

General Physics.—Units and measurements of length, mass and time, and the derived units and measurements of velocity, acceleration, force, work and energy, power and efficiency. The laws of motion and conditions of equilibrium of bodies under the action of forces. Simple machine. Uniform circular motion and the centrifuge.

The elements of hydrostatics including methods for the determination of densities. Elementary principles governing the flow of liquids in rigid and elastic tubes. Viscosity and surface tension and their measurements.

Gas laws including the diffusion of gases and elementary ideas of the kinetic theory of matter.

Heat.—The effect of heat on bodies including thermometry, dilatation, change of state and calorimetry. Convection, conduction and radiation of heat, The relation between heat and work.

Sound.—The production, propagation and reception of sound waves. The measurement of velocity, frequency and wave length of sound.

Light.—Outlines of the wave theory of light including, interference, diffraction, double refraction and polarization of light. Simple geometrical optics, including reflection and refraction at plane and curved surfaces. The range of electro-magnetic waves and various kinds of spectra. Optical instruments including the spectrometer, and photographic camera, the eye as an optical instrument, the microscope and the polarimeter.

Electricity and Magnetism.—The elementary facts and phenomena of magnetism and static electricity.

The production of electric currents and the chemical, magnetic and heating effects of them. Units and measurements of current strength, potential difference and resistance. Thermo-electric couples.

Electric-magnetic induction and Ruhmkorff's coil, Electric discharge in rarefied gases. Cathode and X-Ray.

Practical Physics.—Students are expected to have a practical knowledge of the following subjects:—

General.—The use of graphs and diagrams.

Elementary mensuration and mechanics.

The use of a delicate balance, thermo-meters and the barometer.

The use of the vernier, the screw-gauge and the spherometer.

The determination of densities of solids, liquids and gases.

The use of the falling plate, Fletcher's trolley or Atwood's machine to determine g and n .

The simple pendulum.

The determination of surface tension by (a) the rise in a capillary tube, (b) the surface tension balance.

The comparison of viscosities of liquids.

Heat.—The determination of melting and boiling points.

The determination of the co-efficients of expansion of solids, liquids and gases.

The determination of specific and latent heats by the method of mixtures and of specific heats by the method of cooling.

The determination of the mechanical equivalent of heat.

The use of hygrometers.

Sound.—The use of the sonometer and resonating columns of gases.

Light.—The use of Photometers.

The determination of focal lengths of spherical mirrors, thin lenses and combination of thin lenses.

The determination of the wave length of light by a diffraction grating.

The use of the polarimeter, the spectro-meter and the microscope.

Electricity.—The use of electric batteries.

Mapping magnetic fields.

The experimental proof of the Laws of Electrolysis.

The measurement of resistance by the meter and the microscope.

The comparison of E.M.F.s by (1) Tangent Galvanometer, (2) the Potentiometer.

The use of the electrical calorimeter.

The measurement of the conductivity of an electrolyte.

The use of a Thermo-couple.

BIOLOGY.

Biology.

The examination in Biology shall comprise the subject included in the following syllabuses which are intended only to indicate its general scope and character.

A. General Biology.

The distinctive properties of living and non-living matter.

The difference between animals and plants.

The nature and properties of protoplasm.

The structure of the cell ; Cell division and gametogenesis.

Conjugation and fertilization.

Segmentation and formation of germ layers.

Structure and function of animal tissues.

B. Botany.—

The structure, life-history, and physiology of Yeast, Bacteria, Penicillium or other mould, Spirogyra, Chara, Fern.

The elements of the morphology and physiology of the Angiosperms embracing (a) the structure (macroscopic and microscopic) of the root, stem and leaf ; (b) the structure of a typical flower and modifications of the type ; (c) the inflorescence, and the principal types of branching ; (d) the structure and development of the seeds and embryo ; (e) the principal types of fruits ; (f) the dispersal of seeds and embryo (g) the main facts in relation to nutrition, growth and reaction to environment.

The reproduction and life history of Angiosperms.

C. Zoology.—

The structure, life history and physiology of amoeba, paramaecium, Euglena, Hydra, Earthworm, Leech, Cockroach and the anatomy of Frog and Rabbit. (Only an elementary knowledge of the muscular system of the frog, and the muscular and nervous systems of the rabbit will be required.

An elementary knowledge of the more important types of animal parasites: Protozoan, and Metazoan, such as Entamoeba, Trypanosomes, Plasmodium, Liver-fluke, Tape-worm, Roundworm, etc.

The leading types of reproduction in animals. The main features of the larval history and metamorphosis of the frog, the embryonic membranes and placenta of the foetus of the rabbit.

The chief external characters and poison apparatus of the poisonous snakes of South India.

Variation, Heredity, Natural Selection, Evolution treated in an elementary manner.

Practical Examination.

Each candidate must be prepared to examine microscopically, to dissect and to describe the specimen of parts of the animals and plants enumerated in the

foregoing syllabus with the exception that for the skull of the rabbit will be substituted that of the dog.

First M.B. & B.S. Examination.

ORGANIC CHEMISTRY.

The examination in Organic Chemistry shall comprise the following:—

The ultimate analysis of organic compounds, and estimation of carbon, hydrogen, nitrogen, sulphur, phosphorous and the halogens.

The determination of empirical, molecular, and structural formulae, and of molecular weights of organic substances.

The constitution and most important reactions and relationships of the following groups of compounds, illustrated in each case by a reference to a few of their most important members;

Aliphatic series.—

Paraffins. Unsaturated hydro-carbons. The different classes of alcohols and their derivatives. Halogen and nitro-derivatives of the hydro-carbons. Aldehydes, Ketones, Acids, Sulphonic acids. Simple ethers. Esters. Amines. Phosphines. Arsines. Amino-acids. Amides; Nitrites. Cyanides. Urea.

Aromatic series.—

Benzene. Toluene and their simple derivatives.

Phenols with special reference to phenol, pyrocatechol, resorcinol and hydroquinol, Pyrogallol.

Benzyl alcohol, Benzaldehyde, benzoic acid, salicylic acid. Gallic and tannic acids, phthalic acids, phenolphthalien. Glucosides and Alkaloids.

Practical Examination.

The detection of the following elements :—Carbon. hydrogen, nitrogen, sulphur, phosphorous and the halogens.

Preparation of chloroform and of iodoform from ethyl alcohol and preparation and hydrolysis of an ester and of an amide.

Tests for and reactions of methyl alcohol, ethyl alcohol, glucose, cane sugar, phenol salicylic acid, formates, acetates, oxalates, cyanides, tartarates, citrates, morphine, strychnine, quinine, cinchonine and urea.

The preparation of a fatty acid from a fat. The determination of the molecular weight of a fatty acid by titration.

Candidates will be required to bring to the practical examination note books containing record of their previous practical work. These note books must be certified by the teacher of the candidates as being the actual working notes made by them in the laboratory.

Examiners will use their discretion as to whether or not the candidates may be allowed books for the whole or part of the practical examination.

PHYSIOLOGY—(including Bio-Chemistry).

***Muscle and Nerve.*—**

Use of induction apparatus—structure and properties of muscle—effects on Physiology, contraction of load and fatigue—chemical, thermal and electrical changes in muscle—conduction in nerve—Polarisation phenomena in nerve—reaction of degeneration.

***Central Nervous System.*—**

Reflex action in 'Spinal' frog and in man. Structure and functions of the Spinal cord. Spinal mechanism of co-ordinated movements.

Structure and functions of the Brain Stem. Connections and functions of cranial nerves,

Cerebellum.

General structural arrangements of the Cerebrum and its functions. Cerebral localisation.

Autonomic nervous system.

Special senses.

Muller's law of Specific irritability of nerves.

Structure of the eye-ball. Light reflex. Mechanism of accommodation. Refraction of the eye. Common optical defects. Use of ophthalmoscope. Perimeter. Retina and its connections. Formation of retinal images. Colour vision and contrast.

Structure of auditory apparatus. Auditory sensations. Labyrinthine impressions.

Use of Laryngoscope.

Cutaneous sensations. Gustatory and olfactory sensibility.

Digestion.

Secretion and properties of the digestive juices and bile.

Movements of the stomach and intestines.

Absorption of food-stuffs.

Metabolism.

Metabolism of proteins, fats and carbohydrates. Glycosuria. Estimation of Metabolism. Nitrogen, balance. Influence of work and starvation on Metabolism. Normal Diet.

Temperature of man and its regulation.

Blood.—

Red and white blood corpuscles, their origin, life history and functions, Haemoglobin and its derivatives, Haemolysis, Coagulation. Reaction of blood. Estimation of volume of blood, corpuscles and Haemoglobin.

Circulation.—

Physiological anatomy of the Heart and action of valves. The mechanism of heart pump. Causation of heart beat. Properties of cardiac muscle. Factors influencing the activity of cardiac muscle. Output of heart. The nervous regulation of the heart. Heart reflexes.

Blood pressure. Velocity of blood. Pulse. Capillary circulation. Vasomotor mechanism. Chemical regulation of bloodflow. Influence of exercise on circulation.

Lymph and its formation. Lymphagogues.

Respiration.—

Mechanics of Respiratory movements. Chemistry of respiration. Regulation of respiration. Effect of changes in the air breathed. Estimation of total respiratory exchange and of composition of expired and alveolar air.

Excretion.—

Urine; its composition and characters, Secretion of Urine. Physiology of Micturition.

Skin and skin glands. Their structure and functions,

*Ductless glands.—**The Physiology of reproduction**Secretion and properties of Milk.**Histology.—*

Preparation of specimens of normal tissues, either fresh or previously prepared, so as to demonstrate their minute structure.

Application of the commoner histological methods.

Recognition and description with diagrams, of microscopic preparations of any normal tissue.

Practical Physiology.

The methods employed for the demonstration of fundamental physiological processes and performing simple experiments.

Bio-Chemistry.—

I. The Chemistry of Food—

(a) Inorganic.

(b) Organic Chemistry of Proteins, Fats and Carbohydrates.

(c) Vitamins.

- II. The Chemistry of digestion and absorption in man.
- III. Metabolism—General and special.
- IV. The Chemistry of Respiration and acidosis.
- V. The Chemistry of Blood and Lymph.
- VI. The Chemistry of urine and faeces.
- VII. The Chemistry of internal secretions.

Practical Bio-Chemistry.—

Properties and Re-actions of—

(a) Carbohydrates.

Glucose, Levulose, Maltose, Lactose. Cane-Sugar, Starch, Glycogen and Dextrins.

(b) Fats—olive oil, oleic acid and palmitic acid, glycerol and cholesterol.

(c) Proteins—Albumin and Globulin, Metaproteins—Proteoses—Peptones, amino acids and mucin, gelatin, and casein.

Estimation of Carbohydrates, Glucose, Levulose, Maltose, Lactose.

Estimation of amino-acids.

Properties of Digestive Enzymes—Bile—analysis of Gastric contents.

Qualitative tests and properties of blood and urine—

Quantitative Estimation of chlorides, urea, Sugar, Oon-Protein-Nitrogen, creatinine and uric acid in Blood, and chlorides, sulphates, Phosphates, urea, sugar, creatinine, ammonia acidity and uric acid in urine.

Estimation of alveolar carbondioxide by Fredericia's method.

Second M. B. S. Examination

PHARMACOLOGY

The course in Pharmacology consists of lectures, demonstrations in experimental pharmacology and practical pharmacy, the aim being to impart a general knowledge of the mode of action of drugs treated from an experimental point of view.

The lectures are devoted chiefly to the discussion of the effect of drugs and poisons on the tissues of man and animals and how these effects may be utilised to relieve or cure disease. The total number of lectures shall not be less than 35. The general scheme of the lectures shall be as follows:—

The mode of action of drugs treated from an experimental stand-point. *Pharmacology of the Central Nervous System.*

Alcohol: General anaesthetics ; Hypnotics of the methane series; Bromides; Opium and Cannabis indica.

The Caffeine group: Camphor; strychnine.

Peripheral Nervous action. Curage group; nicotine group; Belladonna group; pilocarpine group, Aconite and Veratrine.

Local Anaesthetic;—Cocaine and its substitutes; Hydrocyanic acid.

Pharmacology of the Genito-Urinary system.

Diuretics and urinary antiseptics.

Ergot; Hydrastics;

Gland Secretions.—

Adrenalin; Pituitary extract; Thyroid extract; Parathyroids and Insulin.

Pharmacology of the Circulation.

Digitalis group.

Pharmacology of the Vessels.

Vaso-constrictors and Vaso-dilators.

Pharmacology of respiration.—

Stimulants; Depressants: Anti-spasmodics; Expectorants; Saponins; Ipecacuanha; Respiratory disinfectants.

Pharmacology of the Alimentary Canal.—

Bitters; Volatile oils; Purgatives; Astringents; Emetics; Enthalminitics.

Pharmacology of Temperature regulation.—

Anti-pyretics; Salicylates.

Drugs acting on the excretion of Uric Acid.

Colchicum; Atophan.

Skin irritants and Counter-irritation.—

Antiseptics and disinfectants,

Drugs acting on metabolism.—

Phosphorus.

Specific Therapy.—

Cinchona alkaloids; Mercury; Arsenic; Bismuth; and Antimony.

Ion action and Salt action.

Certain Positive ions.

Hydrates and Carbonates of the Alkalies Soap.

Certain Negative ions.

Acids,

General action of heavy metals.—

Iron; Silver; Zinc; Copper; Lead; Aluminium; Manganese; Chromium
Gold, Radio-active metals.

Ferments. Sweetening agents; Demulcents and Emollients.

Vitamins.

Prescription writing; Incompatibility; Synergism; Antagonism.

The physical and chemical properties of the drugs considered only in so far as they concern their action and the methods of administration. A selection of the more important pharmaceutical preparations.

Demonstration in Experimental Pharmacology shall be used to illustrate the lectures as far as practicable, and for this purpose the class shall be divided into sections so that each student may see some of the effects of drugs actually occurring. The total number of demonstrations to each batch shall not be less than 25.

Instruction in Practical Pharmacy shall be given in batches, the total number of meetings for each batch, shall be not less than 20. In the practical class the student shall be instructed to prescribe some of the more important drugs dealt with in the lectures, and to dispense his prescriptions.

Final M. B. & B. S. Examination.

MENTAL DISEASES.

The course of mental diseases shall comprise instruction in the following types of disorder:—

(i) Failure of Mental Development;

Idiocy; Imbecility; Weak-mindedness.

(ii) Mania—Depressive Insanity.

Mania; Melancholia; Stupor; Alternating and Circular conditions.

(iii) Delusional Insanity and Paranoia.

(iv) Dementia—

Primary or Adolescent (D. præcox); Consecutive or Termin;
Organic; Para-Syphilitic (G.P.I.); Senile.

(v) Insanity due to drugs—

Alcohol; Indian Hemp; Opium and its derivatives; Cocaine;
Lead.

(vi) Epileptic Insanity.

(vii) Hysteria and Psychasthenia.

(viii) Exhaustion Psychoses—

Post Febrile Insanity : Acute Delirium ; Neurasthenia.

(ix) Epochal Insanities—

Insanity of Puberty and Adolescence ; Insanity of the child-bearing period ; Insanity of Climacteric ; Insanity of old age.

(x) Mental disorder, associated with physical diseases.—Diseases of the Thyroid Gland ; Polioencephalitis Syphilis, Tubercle, Nephritis Diabetes and Gout.

(xi) The Medico-Legal and Social relationships of Insanity.

(xii) General Treatment.

CHAPTER XLIX.

DEGREE OF DOCTOR OF MEDICINE AND MASTER OF SURGERY

*(Regulations)***(i) Degree of Doctor of Medicine.**

1. (a) No candidate shall be admitted to the examination for the degree of Doctor of Medicine unless he produces a certificate showing that— **Admission.**

(1) having passed the M.B. & B.S. degree examination of this University, he has been engaged for three years continuously in the practice of the medical profession; or

(2) after qualifying for the M.B. & B.S. degree, he has passed two years in hospital practice; or

(3) having passed the M.B. & B.S. degree examination in the first class, he has passed one year in hospital practice :

(b) Each candidate must also produce a testimonial, signed by at least two Doctors of Medicine, two members of any of the Royal College of Physicians, or two Masters of Surgery, or two Fellows of any of the Royal College of Surgeons, or two members of the Senate of the Andhra University, certifying that he is in habits and character a fit and proper person to receive the degree of Doctor of Medicine.

2. Candidates shall be examined in one of the following branches :— **Branches of Examination.**

Branch I—Medicine including Tropical Medicine—

(a) Medicine—one paper ; Tropical Medicine—one paper.

(b) Pathology and Bacteriology—one paper.

(c) An essay in one or two subjects in Medicine.

(d) A clinical and oral examination, including an examination in Pathological specimens.

Branch II—Pathology including Bacteriology—

(a) Pathology—two papers.

(b) Medicine including Tropical diseases—one paper.

(c) An essay in one or two subjects in Pathology.

(d) A practical and oral examination including the examination of Pathological specimens.

Candidates may
qualify in two
branches.

3. A candidate who has passed the examination in one branch may appear, on a subsequent occasion, in another branch, but no candidate may appear for the examination in two branches in the same year.

4. Candidates shall be approved by the examiners and shall be declared to have passed, if they have shown a competent knowledge in all the subjects of the examination. All other candidates shall be deemed to have failed in the examination.

(II) Degree of Master of Surgery.

Admission,

5. (a) No candidate shall be admitted to the examination for the degree of Master of Surgery unless he produces a certificate showing that—

(1) having passed the M.B. & B.S. degree examination of this University, he has been engaged for three years continuously in the practice of medical profession ; or

(2) after qualifying for the M.B. & B.S. degree examination he has passed two years in hospital practice ; or

(3) having passed the M.B. & B.S. degree examination in the first class, he has passed one year in hospital practice ;

(b) Each candidate must also produce a testimonial, signed by at least two Doctors of Medicine, or two members of any of the Royal College of Physicians, or two Masters of Surgery, or two Fellows of any of the Royal College of Surgeons, or two members of the Senate of the Andhra University, certifying that he is in habits and character a fit and proper person to receive the degree of Master of Surgery.

Subjects for
Examination.

6. Candidates shall be examined in—

(1) Surgery—one paper.

(2) Surgical Anatomy and pathology—one paper.

(3) One of the following special subjects—one paper—

(i) Ophthalmology.

(ii) Venereal and Genito-Urinary Surgery.

(iii) Aural and Laryngeal Surgery.

- (4) An essay in General Surgery.
- (5) Operative Surgery and the use of instruments.
- (6) A clinical and oral examination including the examination of Pathological specimens.

7. Candidates shall be approved by the examiners and shall be declared to have passed, if they have shown a competent knowledge in all the subjects of the examination. All other candidates shall be deemed to have failed in the examination.

NOTE—The graduates of other Universities, who hold degrees considered by the Andhra University as equivalent to the M.B. & B.S. of the Andhra University, may be permitted by the Syndicate to appear for the M.D. or M.S. degree of the Andhra University, if they satisfy the other regulations.

CHAPTER L.

ORIENTAL TITLES AND CERTIFICATES OF
PROFICIENCY—(OLD REGULATIONS.)

(Regulations).

Examination.

1. There shall be an examination in Oriental Learning with a *compulsory division* for Titles and an *optional division* qualifying for Certificates of Proficiency in the modern methods of study.

I. COMPULSORY DIVISION FOR TITLES.

2. The titles shall be as follows—

**Names of
Titles.**

Vidya Praveena added to Mimamsa, Vedanta, Nyaya, Vyakarana or Sahitya according to the special branch of study selected by the candidate who has offered for his examination Sanskrit alone;

Ubhayabhasha Praveena in the case of a candidate who has offered for his examination either (a) Sanskrit and any one of the following languages, Telugu, Kannada and Oriya, or (b) Telugu, Kannada, or Oriya as the main language with Sanskrit as a subsidiary language, or (c) Telugu and any other Dravidian Language.

†*Alim-i-Fazil* in the case of a candidate who has offered for his examination Arabic alone.

†*Munshi-i-Kamil* in the case of a candidate who has offered for his examination Persian as the principal language, and Urdu as the subsidiary language, and also possesses an elementary knowledge of Arabic Grammar.

*For Regulation etc. in force as from the Examination of 1936, *vide* next Chapter.

†No examination for Alim-i-Fazil and Munshi-i-Kamil Titles as being held after April 1938, as there are no recognised institutions presenting candidates for the examination from 1934.

3. Candidates for the *Vidya Praveena* title shall offer for Subjects. their examination Sanskrit alone; and those for the *Ubhayahasha Praveena* title either (a) Sanskrit and any one of the following languages, Telugu, Kannada and Oriya, or (b) Telugu, Kannada or Oriya as the main language with Sanskrit as a subsidiary language, or (c) Telugu and any other Dravidian Language.

Candidates for the *Alim-i-Fazil* title shall offer for their examination Arabic alone; and those for the *Munshi-i-Kamil* title Persian as the principal language and Urdu as the subsidiary language.

4. The course of studies for the examination for Titles shall extend over four years and shall be taken in an institution or institutions approved by the Syndicate. Course of Studies, Four years.

5. The examination for titles shall be divided into two parts, Examination— Viz.,—preliminary and final—the preliminary examination in a specified portion of the course at the end of the second year and the final Preliminary and Final in the remaining portion of the course at the end of the fourth year. No candidate shall be admitted to the final examination until he has passed the preliminary examination.

5-A. Candidates who have qualified under the regulations of this Chapter for Titles in Oriental Learning may continue their studies under the same regulations in order to qualify further (i) for the same title in an additional branch or branches, or in an additional language or in additional languages, or (ii) for other Titles under the following conditions: Conditions for appearing for addl. Titles, Branches or Languages.

GENERAL.

(i) No candidate who has qualified for a Title will be admitted to any further examination for a Title, except after the expiry of two years from the date of passing the last preceding qualifying examination, provided that candidates who have qualified for (1) the *Vidya Praveena* Title in any of the three South Indian Schools of Vedanta included in Branch II or (2) one of the titles in Arabic or Persian shall be admitted to a further examination (a) in any other South Indian School of Vedanta, or (b) in the other title in Arabic or Persian after the expiry of one year from the date of passing the last preceding qualifying examination.

(ii) Applications for exemption from the production of the prescribed certificates shall be forwarded so as to reach the Registrar before the 1st October preceding the examination.

(iii) No candidate who has already proceeded to a Title and has been awarded his Diploma shall be admitted at convocation a second time to the same Title, notwithstanding that he may have qualified in an additional Branch or in an additional Language: an endorsement will be made upon his Diploma setting forth the further examinations passed by him, the dates of such examinations and the class in which he was placed.

(iv) The provisions of Regulation 14 of this Chapter shall apply to all examinations held under this Regulation which shall, for the purpose of this regulation be deemed to be equivalent to either the Preliminary or the Final Examination for a Title as the case may be.

SPECIAL

i. *Vidya Praveena.*

A candidate who has qualified for the Title of Vidya Praveena in any of the special branches of study may further qualify in any other branch by passing in one and the same year an examination in such branch consisting of the question papers set that year in the special part only for both the Preliminary and Final Examinations in that branch provided that, in the case of candidates who have already qualified in one of the three South Indian Schools of Vedanta and seek to qualify in any other South Indian School of Vedanta, such further examination in the special part alone shall consist only of all papers except that relating to (b) in the Preliminary Examination.

ii. *Vidya Praveena and Ubhayabhasha Praveena.*

A candidate who has qualified for the Title of Vidya Praveena may further qualify for the Title of Ubhayabhasha Praveena by passing the examination for that Title in accordance with the regulations, provided that such a candidate who offers for his examination Sanskrit and a Dravidian language shall be exempted

from examination in Sanskrit and shall be permitted to take the whole examination in the Dravidian language in one year, and may qualify for the title of Ubhayabhasha Praveena by passing the examination in that language; provided also that such a candidate who offers for his examination two Dravidian languages and is exempted by the Syndicate from the production of the required certificates shall be permitted to take the Preliminary and Final Examinations in successive years.

iii. *Ubhayabhasha Praveena.*

A candidate who has qualified for the Title of Ubhayabhasha Praveena may qualify in an additional language or in additional languages by passing the examination in such language or languages according to the regulations. A candidate who offers one additional language only may take the whole examination in that language in one year, and a candidate who offers for his examination two Dravidian languages and is exempted by the Syndicate from the production of the required certificates shall be permitted to take the Preliminary and Final Examinations in successive years.

Candidates desiring to qualify in an additional Dravidian language may offer either of the course in that language detailed in Regulation 7 of this Chapter.

A candidate who has qualified for the title of Ubhayabhasha Praveena Part A examination under Regulation 7-A of the course, may, in accordance with the regulations, further qualify himself for the same title in Part B after the expiry of one year by passing the examination in accordance with Regulation 7-B of the course subject to the following conditions:—

(i) that he shall not be required to pass the Entrance test prescribed for the Ubhayabhasha Praveena Part B of the course;

(ii) that he shall take the vernacular which he has taken under Part A for the Part B examination also; and

(iii) that he shall take the whole examination (both Preliminary and Final) in one and the same examination.

iv. Ubhayabhasha Praveena and Vidya Praveena.

A candidate who has qualified for the title of Ubhayabhasha Praveena under Regulation 7-A *i.e.*, Part A, may further qualify himself for the title of Vidya Praveena Sahitya Branch after the expiry of one year by passing the examination for that title in accordance with the regulations subject to the following conditions :—

i. that he shall not be required to pass the Entrance test prescribed for the Vidya Praveena Sahitya Branch ; and

ii. that he shall answer all the papers of both the Preliminary and Final examinations in the same year provided that a candidate who secured in Sanskrit at the Ubhayabhasha Praveena examination Part A, 30 per cent of the total marks prescribed therefor, shall be exempted from answering the corresponding papers when he appears for Vidya Praveena examination.

6. Vidya Praveena.

i. The course of studies shall be as follows—

A. General Subject.

- (a) The History of Sanskrit Language and Literature.
- (b) Prescribed text-books.

B. Special Subject.

ii. *For the Preliminary examination*, the course in the general part shall comprise—

- (a) Prescribed text-books relating to the elements of Vyakarana for candidates taking up Branches, I, II and III only, of Tarka for candidates taking up Branches IV and V only and of Mimamsa for all.
- (b) Prescribed text-books chosen from among the Mantras, the Brahmanas, the Upanishads, the Grihya and Dharma Sutras, and the Smritis.

For the Final Examination, the course in the general part shall comprise the History of Sanskrit Language and Literature.

iii. The course in the special part shall consist of one of the following branches of study taken by the candidate :—

Branch I.—Mimamsa Group.

For the Preliminary Examination, prescribed text-books relating to Purvamimamsa, Veda, Sruta and Dharmasastra.

For the Final Examination, (a) prescribed text-books relating to Purvamimamsa. (b) The application of Mimamsa to Vedic exegesis and to the proper comprehension of the social and the legal aspects of the Dharmasastras.

Branch II.—Vedanta Group.

For the Preliminary Examination, (a) prescribed text-books relating to the *Bhasya Prasthanā* of one of the three South Indian Schools of Vedanta, viz., Advaita, Visistadvaita and Dvaita, and (b) prescribed text-books relating to Yoga, Sankhya, and the elements of three South Indian Schools of Vedanta.

There shall be two papers, one on (a) and the other on (b).

For the Final Examination, (a) prescribed text-books relating to the *Bhasya Prasthanā* of one of the three South Indian Schools of Vedanta, viz., Advaita, Visistadvaita and Dvaita ; and (b) prescribed text-books relating to the *Vada Prasthanā* of one of the three South Indian Schools of Vedanta.

There shall be two papers on the books prescribed under (a) and one paper on the books prescribed under (b).

Branch III.—Nyaya Group.

For the Preliminary Examination, prescribed text-books relating to the Nyaya and Vaisesika Darsanas including select portions of Purvavada.

For the Final Examination, prescribed text-books relating to Nyaya and Vaisesika Darsanas including select portions of Uttaravada and of the Sabdabodha works in Nyaya and Mimamsa.

Branch IV.—Vyakarana Group.

For the Preliminary Examination, prescribed text-books relating to advanced Vyakarana, including select portions of standard commentaries on the *Sidhantakaumudi*.

For the Final Examination, prescribed text-books relating to advanced Vyakarana, including Sabdabodha works in Vyakarana and select portion of the *Mahabhashya* and standard commentaries on the *Sidhantakaumudi*.

Branch V.—Sahitya Group.

For the Preliminary Examination, prescribed Kavyas and Natakas and a simple work in Poetics :

For the Final Examination, (a) prescribed text-books relating to Grammar including Prakrit Grammar, Prosody and Poetics ; and (b) prescribed text-books of an advanced character, relating to Alan-kara Sastra.

iv. Vidya Praveena Examination.—

(a) In the *Preliminary Examination* there shall be in the general part two papers on the prescribed text-books and, in the special part, two papers on the prescribed text-books.

(b) In the *Final Examination* there shall be in the general part one paper on the History of Sanskrit Language and Literature and in the special part there shall be three papers on the prescribed text-books.

7. A. *Ubhayabhasha Praveena with Sanskrit and any one of the following languages:— Telugu, Kannada and Oriya.*

i. Sanskrit—

The course shall be—

For the Preliminary Examination, prescribed Kavyas, Natakas, a simple work in Poetics and a prescribed portion in Grammar. The text-books prescribed under this head shall as far as possible be the same as those prescribed for the preliminary examination under Branch V Sahitya Group—Vidya Praveena course.

Question
Papers.

Ubhayabhasha
Praveena :
Course of
studies—

For the Final Examination, (a) History of Sanskrit Language and Literature; and (b) prescribed text-books relating to grammar including Prakrit Grammar, Prosody and Poetics. The text-books prescribed under this head shall be the same as those prescribed under (a) for the Sahitya Group—Vidya Praveena final examination.

ii. *Vernacular Language.*

The course shall be—

For the Preliminary Examination:—

- (a) Prescribed text-books in Poetry and Prose and prescribed text-books relating to Grammar, Prosody and Poetics, and
- (b) Vernacular Composition.

For the Final Examination:—

Prescribed text-books in Poetry and Prose and prescribed text-books relating to Grammar, Prosody and Poetics.

iii. *Ubhayabhasha Praveena Examination.*

- (a) In the *Preliminary Examination* there shall be one paper on the prescribed vernacular text-books in Poetry and Prose, one paper on the prescribed vernacular text-books relating to Grammar and Prosody and in Vernacular Composition and two papers on the prescribed Sanskrit text-books. The last mentioned papers shall as far as possible be the same as the papers on the text-books prescribed for the preliminary examination under the special part of the Sahitya Vidya Praveena course. Question Papers.
- (b) *In the Final Examination* there shall be—
 - (i) A paper on the prescribed Sanskrit text-books.
 - (ii) A paper on the History of the Sanskrit Language and Literature.

N.B.—This paper shall be the same as the corresponding paper for the Vidya Praveena examination.

(iii) Two papers on the prescribed vernacular text-books.

N.B.—(1) The scope of each paper will be defined by the Boards of Studies concerned.

(2) The first paper on the text-books prescribed for the Sahitya Vidya Praveena final examination shall be identical with paper (1) comprised in the Ubhayabhasha Praveena final examination and shall be on the text-books prescribed under (a) for the Sahitya Vidya Praveena final examination. The second and third papers on text-books for the Sahitya Vidya Praveena Final Examination shall be on those prescribed therefor under (b).

B. Ubhayabhasha Praveena with Telugu, Kannada or Oriya as the Main Language and Sanskrit as a Subsidiary Language.

i. The Selected Language—

The course shall be—

For the Preliminary Examination, (a) prescribed text-books in Poetry and Prose; (b) prescribed text-books relating to Grammar; and (c) Composition.

For the Final Examination, (a) prescribed text-books in Poetry; (b) prescribed text-books relating to Advanced Grammar, Prosody and Poetics; (c) History of Language and Literature.

ii. Sanskrit—

C. *Ubhayabhasha Praveena with Telugu and any other Dravidian Language.*

The course in each language, the text-books prescribed and the examination therein shall be identical with those prescribed for the same language when offered along with Sanskrit for the Ubhayabhasha Praveena title ; provided that a candidate who offers two languages shall, at the end of the second year of his course, take his preliminary examination in one of the two languages by answering all the four question papers in that language as set forth under 7-A iii. supra for the preliminary and final examinations, and that he shall, at the end of the fourth year of his course, take his final examination in the other language by adopting a similar procedure.

8. The following shall be the course of studies in Arabic for the title *Alim-i-Fazil* :—

Alim-i-Fazil
Course of
Studies.

Preliminary.—

The courses of study shall consist of—

- I. Tafsir and Hadith.
- II. Fiqh, Aqaid and Mantiq.
- III. Prose Text-books.
- IV. Poetry Text-books.
- V. History.
- VI. Translation from Arabic into Urdu and from Urdu into Arabic.

Text-books will be prescribed from time to time.

Final—

The courses of study shall consist of—

- I. Tafsir and Hadith and Ilmul Hadith.
- II. Fiqh, Usulul-Fiqh.
- III. Prose Text-books.
- IV. Poetry Text-books.
- V. History.
- VI. Translation from Arabic into Urdu and from Urdu into Arabic.
- VII. Mantiq and Balaghat.
- VIII. Composition.

Text-books will be prescribed from time to time.

Munshi-i-kamil:
Course of
Studies,

9. The following shall be the course of studies for the title
Munshi-i-Kamil—

Preliminary:—

The courses of study shall consist of Persian as the main language and Urdu as a subsidiary language together with a text-book in Arabic.

Persian as the main subject will include—

- I. Persian Prose.
- II. Persian Poetry.
- III. Translation from Persian into Urdu and *vice versa*.
- IV. Composition in Persian.

Urdu as the subsidiary subject will include—

- I. Urdu Prose.
- II. Urdu Poetry.

Text-books will be prescribed from time to time.

Questions on Grammar may be included in the examination paper on the text-books.

Final.—

The courses of study shall consist of Persian as the main language and Urdu as a subsidiary language, together with a text-book in Arabic.

Persian as the main subject will consist of—

- I. Persian Prose.
- II. Persian Poetry.
- III. Translation from Persian into Urdu and *vice versa*.
- IV. History of Persian Language and Literature.
- V. Composition in Persian.

Urdu as the subsidiary subject will consist of—

- I. Urdu Prose.
- II. Urdu Poetry.

Text-books will be prescribed from time to time.

Questions on Grammar may be included in the examination papers on the text-books.

10. All the papers in the examination for titles shall be set and answered in the respective languages to which they relate provided that papers in Sanskrit as the subsidiary language for the

Setting and
Answering of
papers.

Ubhayabhasha Praveena course mentioned under 2 (b) in this Chapter shall be set in Sanskrit and answered in the respective main languages of the candidates. Devanagari script shall be used for Sanskrit.

**Admission test :
Vidya praveena and
Ubhayabhasha
Praveena.**

11. No person shall be permitted to enter upon any of the foregoing Vidya Praveena and Ubhayabhasha Praveena Part A course of study unless he has passed the admission test conducted by the Education Department and obtained from the department a certificate of fitness for admission to the course he proposes to take up.

In the case of candidates selecting courses of study for Ubhayabhasha Praveena Part B, the admission test shall consist of the two papers in the concerned modern Indian Language as an advanced second language set under Part III of the Intermediate Examination in Arts and Science, and the first paper on prescribed textbooks in Sanskrit set under Part II of the same examination. In the latter paper i.e. paper for Sanskrit, the question shall be rendered into Sanskrit and answered in the selected modern language.

In the case of candidates selecting courses of study for Ubhayabhasha Praveena—Part C, the admission test shall consist of two papers in each of the languages set for the concerned advanced second languages under Part III of the Intermediate Examination in Arts and Science.

Candidates obtaining not less than 35 per cent of the total number of marks in each of the two languages selected and 40 per cent in the aggregate shall be certified eligible for admission. A candidate who has appeared for the Intermediate Examination and has obtained the required passing minima in the above language papers shall be admitted to the Ubhayabhasha Praveena courses without any further admission test, provided the candidate selects for the Ubhayabhasha Praveena course the particular languages in which he has passed the Intermediate Examination.

A candidate who has appeared for the Intermediate Examination and has passed in one of the selected languages forming part of the courses for the entrance test, shall be exempted from passing that part again and shall be required to pass only the part in which he has not already passed.

Notwithstanding anything to the contrary contained in the above Regulations, the existing sub para of Regulation 11 will remain in force for the benefit of candidates who have qualified themselves for admission to course of study for Ubhayabhasha Praveena Parts B and C—by passing in the required papers under the old Intermediate Examination.

Notwithstanding anything to the contrary contained in the above Regulations, the Syndicate shall have power to recognize as equivalent to the whole or part of the prescribed entrance tests any examination in one or more languages passed by candidates seeking to enter on a course of study prescribed for the Ubhayabhasha Praveena Parts B and C provided that such an examination is at least equal in standard to the Intermediate Examination in the concerned Languages.

11-A. No person shall be permitted to enter upon Munshi-i-Kamil and Alim-i-Fazil Courses of study unless he has passed the prescribed admission test.

Admission test:
Mushi-i-Kamil
and Alim-i-
Fazil.

In the case of candidates selecting courses of study for Munshi-i-Kamil the text-books shall be the same as those prescribed for Persian and Urdu as an advanced second language under Part III of the Intermediate Examination. There will be two papers, each of 3 hours' duration. The first paper shall be on prescribed text-books in Urdu including Translation from Urdu into Persian. The second paper shall be on prescribed text-books in Persian including Translation from Persian into Urdu.

In the case of candidates selecting courses of study for Alim-i-Fazil, the text-books shall be the same as those prescribed for Arabic as an advanced second language under Part III of the Intermediate Examination. There will be two papers, each of 3 hours' duration. The first paper shall be in the prescribed text-

books in Arabic and Grammar. The second paper shall consist of questions on Translation from Arabic into Urdu and *vice versa* with a question on Composition in Arabic.

Answering of papers.

The answers in respect of these admission tests shall be written in Urdu.

Candidates obtaining not less than 35% of the marks in each of the two papers and 40% of the marks in the aggregate shall be certified eligible for admission.

Certificate of fitness.

No person shall be permitted to enter upon the courses of study prescribed for the titles *Alim-i-Fazil* and *Munshi-i-Kamil*, unless he has obtained a certificate of fitness from the head of the approved institution which he proposes to enter.

Approval of Institutions.

12. The Syndicate shall be empowered to approve, for the purpose of the examination, such institutions as in its opinion are duly qualified to provide efficient instruction in one or more of the courses prescribed and also to withdraw such approval if at any time it thinks fit to do so.

Applications for approval.

All the applications for approval under this Regulation shall be referred for opinion to the Boards of Studies concerned before they are finally disposed of by the Syndicate.

Exemption from certificates.

13. The Syndicate shall have the power to grant exemption from the production of either or both of the annual certificates of attendance, required by candidates for the Oriental Title Examinations, provided that the candidate—

- (1) is at the time of the examination at least twenty-five years of age, subject to the provision that this age rule shall not apply in the case of (1) women candidates or (2) candidates who, after getting themselves qualified for one Oriental Title, wish to appear for another examination in Oriental Titles or a Certificate of Proficiency in Oriental Learning, or (3) candidates who have passed the B.A., Degree Examination of this University or an examination recognised as equivalent thereto."

(2) is certified by the head of an approved institution, or by a member of the Board of Studies dealing with the subject or language offered for the examination, or by a Mahamahopadhyaya or a Shamsul-ul-ulama or by any other competent scholar recognised by the Syndicate, to be qualified by his attainments to appear for the examination in the following form :—

Certificate for exemption.

I hereby certify that, to the best of my knowledge and belief.....will have completed his twenty-fifth year before the date of the next Oriental Title Examination, and that he is qualified by his attainments to appear for the examination.

Station.

Date.

Signature and designation.

Applications for exemption under this regulation must be forwarded so as to reach the Registrar before the 1st October preceding the examination.

14. A candidate shall be declared to have passed the preliminary examination if he obtains not less than forty *per cent* of the total marks in that examination. A candidate shall be declared to have passed the final examination if he obtains not less than forty *per cent* of the total marks in that examination. All other candidates shall be deemed to have failed.

Marks qualify-
ing for a pass.

Successful candidates in that examination shall be arranged in three classes—

The first, consisting of those who obtain not less than sixty *per cent* ranked in the order of proficiency as determined by the total marks obtained by each; the second, of those who obtain not less than fifty *per cent* ranked in the order of proficiency as determined by the total marks obtained by each; and the third, of those who obtain not less than forty *per cent* of the total marks.

Classification
of successful
candidates.

*II. OPTIONAL DIVISION QUALIFYING FOR CERTIFICATES
OF PROFICIENCY IN ORIENTAL LEARNING.*

**Subjects for
Examination.**

15. Candidates for certificates shall offer for their examination one of the following subjects :—

- (1) Literary criticism as applied to Sanskrit Literature according to a syllabus.
- (2) Indian Philosophy in its relation to Western Philosophy, according to a syllabus.
- (3) Indo-European Philology with special reference to Sanskrit, according to a syllabus.

- (8) Arabian Philosophy in its relation to Western Philosophy, according to a syllabus.
- (9) Semitic Philosophy—for Arabic; and Indo-Persian Philology with special reference to Persian—for Persian, according to a syllabus.

**Course of
Studies—two
years.**

16. The courses of studies for the examination shall extend over a period of two years and shall be taken in an institution or institutions approved for the purpose by the Syndicate.

**Papers set and
answered in
English.**

17. The question papers in the examination for certificates shall be set and answered in English.

**Time of Exami-
nation.**

18. The examination for certificates shall follow immediately after the Final Examination for Titles in Oriental Learning.

Admission.

19. No candidate shall be admitted to the examination for certificates until the expiry of two years from the date of his appearing for and passing the preliminary examination for Titles,

20. The Syndicate shall be empowered, after reference to the Board of Studies in Sanskrit, or in Arabic as the case may be, to approve for the purpose of the examination for certificates such institutions as in its opinion are duly qualified to provide efficient instruction in accordance with the syllabuses prescribed for the several optional subjects of the examination and also to withdraw such approval if at any time it thinks fit to do so. **Approval of Institutions.**

21. Applications for exemption from the production of the prescribed certificate shall be forwarded so as to reach the Registrar before the 1st October preceding the examination. **Exemption.**

22. Candidates for certificates, who have passed the examination for Titles and have satisfied the Examiners in one optional subject may present themselves for examination in another optional subject after an interval of two years without further attendance in an approved institution. **Candidates may qualify for another optional.**

23. In each subject for examination for certificates there shall be one paper of three hours' duration, which candidates shall be required to answer on the morning of the day following the final examination for Titles. **Duration of paper.**

24. A candidate shall be declared to have passed the examination, if he obtains not less than 40 per cent of the marks. All others shall be deemed to have failed in the examination. Successful candidates shall be arranged in three classes :

- (a) Those who obtain not less than 60 per cent of the marks shall be placed in the 1st class.
- (b) Those who obtain not less than 50 per cent of the marks shall be placed in the 2nd class.
- (c) The rest shall be placed in the 3rd class.

SYLLABUSES.

VIDYA PRAVEEN—FINAL EXAMINATION.

I. HISTORY OF SANSKRIT LANGUAGE AND LITERATURE.

(A) HISTORY OF SANSKRIT LANGUAGE.

I. GENERAL.

I. Nature, scope and utility of the Science of Language.

II. Language—Theories of its origin. Is language the creation of God or the acquisition of man?

- III. The three chief elements of language—Varna, Pada and Vakya. The Vakya Sphota theory of Indian Grammarians.
- IV. The mechanism of speech. The production and classification of speech-sounds. The phonetic description of the several speech-sounds.
- V. The morphological classification of languages—Radical or inflectional, (agglutinating and amalgamating) and Analytic.
- VI. The genealogical classification of languages. The Primitive Indo-European family of languages. The Aryan sub-branch. The place of Sanskrit therein.

The second paper shall be on text-books in Persian including translation from Persian into Urdu.

In the case of candidates selecting courses of study for *Alim-i-Fazil*, the text-books shall be the same as those prescribed for Arabic as an advanced second language under Part III of the Intermediate Examination. There will be two papers, each of three hours' duration. The first paper shall be in the prescribed text-books in Arabic and Grammar. The second paper shall consist of questions on translation from Arabic into Urdu and *vice versa* with a question on Composition in Arabic.

The answers in respect of these admission tests should be written in Urdu. Answering of papers.

Candidates obtaining not less than 35 per cent of the marks in each of two papers and 40 per cent of the marks in the aggregate shall be certified eligible for admission.

13. No person shall be permitted to enter upon the courses of study prescribed for the titles, *Alim-i-Fazil* and *Munshi-i-Kamil*, unless he has obtained a certificate of fitness from the head of the approved institution which he proposes to enter. Certificate of fitness.

14. Candidates who have qualified under the regulations of this Chapter for Titles in Oriental Learning may continue their studies under the same regulations in order to qualify further (i) for the same title in an additional branch or in an additional language, or (ii) for other titles without passing the entrance test prescribed therefor under the following conditions :— Conditions of appearing for addl. Titles, Branches or Languages.

GENERAL.

(i) No candidate who has qualified for a title will be admitted to any further examination for a title, except after the expiry of two years from the date of passing the last preceding qualifying examination provided that candidates who have qualified for (1) the *Vidya Praveena* Title in any one of three South Indian Schools of Vedanta included in Branch II or (2) one of the titles in Arabic or Persian shall be admitted to a further examination (a) in any other South Indian School of Vedanta, or (b) in the other title in Arabic or Persian after the expiry of one year from the date of passing the last preceding qualifying examination.

(ii) Applications for exemption from the production of the prescribed certificates shall be forwarded so as to reach the Registrar before the 1st October preceding the examination.

(iii) No candidate who has already proceeded to a title and has been awarded his diploma shall be admitted at Convocation a second time to the same title, notwithstanding that he may have qualified in an additional branch or in an additional language; an endorsement will be made upon his diploma setting forth the further examinations passed by him, the dates of such examinations and the class in which he was placed.

(iv) A candidate shall be declared to have passed any of the examinations held under this regulation which are not specifically referred to as Preliminary, if he obtains not less than 40 per cent of the total marks in that examination. Of the successful candidates, those who obtain not less than 60 per cent of the total number of marks shall be placed in the first class ranked in the order of proficiency as determined by the total number of marks obtained by each, those who obtain not less than 50 per cent of the total number of marks in the second class, and the rest in the third class.

SPECIAL.

(i) *Vidya Praveena.*

A candidate who has qualified for the Title of Vidya Praveena in any one of the special branches of study may further qualify in any other branch by passing in one and the same year an examination in such branch consisting of question papers set that year in the special part only for both the Preliminary and Final Examinations in that branch provided that, in case of candidates who have already qualified in one of the three South Indian Schools of Vedanta and seek to qualify in any other South Indian School of Vedanta such further examination in the special part alone shall consist only of all papers except that relating to (b) in the Preliminary Examination.

(ii) *Vidya Praveena and Bhasha Praveena.*

A candidate who has qualified for the Title of Vidya Praveena may further qualify for the Title of Bhasha Praveena by passing the examination for that title in accordance with the regulations, provided that he shall be exempted from examination in Sanskrit and shall be required to take the whole examination in the Modern Indian language in one and the same year.

(iii) *Bhasha Praveena.*

A candidate who has qualified for the Title of Bhasha Praveena may qualify in an additional language by passing the examination in such language according to the regulations; provided that he shall take the whole examination in one and the same year.

(iv) *Ubhayabhasha Praveena A and Bhasha Praveena.*

A candidate who has qualified for the title of Ubhayabhasha Praveena Part A under the old regulations may further qualify himself for the title of Bhasha Praveena in accordance with the regulations, provided that he shall be exempted from examination in the Sanskrit Part if he had secured 20 per cent of the total marks in Sanskrit at the Ubhayabhasha Praveena examination in the year in which he passed in that examination and he shall be required to take the whole examination in one and the same year.

(v) *Ubhayabhasha Praveena B and Bhasha Praveena.*

A candidate who has qualified for the title of Ubhayabhasha Praveena Part B under the old regulations may further qualify himself for the title of Bhasha Praveena in a selected Modern Indian Language by passing the examination both in Sanskrit and the selected language; provided, however, that he shall be exempted from examination in the selected language if he had obtained 35 per cent of the marks in it at the Ubhayabhasha Praveena examination in the year in which he passed in that examination and he shall be required to take the whole examination in one and the same year.

15. The Syndicate shall have the power to grant exemption from the production of either or both of the annual certificates of **Exemption from certificates,**

attendance required by candidates for the Oriental Title Examinations, provided that the candidate—

- (1) is at the time of the examination at least twenty-five years of age, subject to the provision that this age rule shall not apply in the case of (1) women candidates or (2) candidates who, after getting themselves qualified for one Oriental Title, wish to appear for another examination in Oriental Titles or a Certificate of Proficiency in Oriental Learning, or (3) candidates who have passed the B.A., Degree Examination of this University or an examination recognised as equivalent thereto.
- (2) is certified by the head of an approved institution, or by a member of the Board of Studies dealing with the subject or language offered for the examination, or by a Mahamahopadhyaya or a Shamsul-ul-ulama or by any other competent scholar recognised by the Syndicate to be qualified by his attainments to appear for the examination in the following form ;

Certificate for exemption.

I hereby certify that to the best of my knowledge and belief _____ will have completed his twenty-fifth year before the date of the next Oriental Title Examination, and that he is qualified by his attainments to appear for the examination.

Station.

Date.

Signature and designation.

Applications for exemption under this regulation must be forwarded so as to reach the Registrar before the 1st October preceding the examination.

Marks qualifying for a pass in V. P. Munshi-i-Kamil and Alim-i-Fasil examinations.

16. A candidate shall be declared to have passed the preliminary examination if he obtains not less than forty *per cent* of the total marks in that examination, provided that in the case of Vidya Praveena examination, he shall also obtain not less than thirty *per cent* of the marks in the paper on the prescribed text-books mentioned

in section 6 ii-(a) *supra*, and a candidate shall be declared to have passed the final examination if he obtains not less than forty *per cent* of the total marks in that examination. All other candidates shall be deemed to have failed.

Successful candidates in that examination shall be arranged in three classes :—

Classification
of successful
candidates.

The first, consisting of those who obtain not less than sixty *per cent* ranked in the order of proficiency as determined by the total number of marks obtained by each; the second, of those who obtain not less than fifty *per cent* ranked in the order of proficiency as determined by the total number of marks obtained by each; and the third, of those who obtain not less than forty *per cent* of the total marks.

A candidate shall be declared to have passed the Preliminary examination if he obtains not less than thirty-five *per cent* of the total marks in Sanskrit and not less than forty *per cent* of the total marks in the Modern Indian language in one or separate examinations.

Marks qualify-
ing for a pass
in B. P. exami-
nation.

A candidate shall be declared to have passed the Final Examination if he obtains not less than thirty-five *per cent* of the total marks in Sanskrit and not less than forty *per cent* of the total marks in the Modern Indian language in one or separate examination. All other candidates shall be deemed to have failed.

Out of candidates who pass in both the languages—Sanskrit and Modern Indian language of the Final course, in one and the same examination, those who obtain not less than sixty *per cent* of the total number of marks in both the languages shall be placed in the first class and ranked in the order of proficiency as determined by the total marks obtained by each, those who obtain not less than fifty *per cent* of the total number of marks in both the languages in the second class and ranked in the order of proficiency as determined by the total number of marks obtained by each, and the rest in the third class. Those who obtain not less than sixty *per cent* of the total

Classification
of successful
candidates.

marks in Sanskrit or the selected Modern Indian language shall be declared to have gained distinction in that language.

Candidates for the Final, who obtain the prescribed number of marks in each language in separate examinations and are declared to have passed the whole examination, shall be placed in a separate list in the third class.

Transitory Regulations

It shall be competent for the Syndicate to grant exemption to candidates who have passed the Ubhayabhasha Praveena A or B Preliminary Examination in 1935 or earlier to appear for the Ubhayabhasha Praveena Final Examination under the Old Regulations in 1938 or 1939. In no case, however, shall the Ubhayabhasha Praveena Final Examination under the Old Regulations be conducted after the year 1939.

For the benefit of candidates who fail in Ubhayabhasha Praveena Preliminary examination (Groups A, B and C) in 1935 or earlier, the Ubhayabhasha Praveena Preliminary examination under the Old Regulations (i.e., in force up to the examinations of 1935) will be held in March-April of 1936 and 1937 under the old time-tables. Similarly for the benefit of candidates who fail in Ubhayabhasha Praveena Final examination (Groups A, B and C) in 1937 or earlier, the Ubhayabhasha Praveena Final examination under the Old Regulations (i.e., in force up to the examinations of 1937) will be held in March-April of 1938 and 1939 under the old time-tables. The text-books and syllabuses for the Preliminary examinations of 1936 and 1937 and for the final examinations of 1938 and 1939 shall be the same as those prescribed for the Preliminary and Final examinations of 1935 and 1937 respectively.

No examination for the Ubhayabhasha Praveena examination (Preliminary and Final) under the Old Regulations shall be held as from the examinations of 1938 and 1940 (Preliminary and Final) respectively.

2. Certificate of Proficiency in Oriental Learning.

17. Candidates for certificates shall offer for their examination one of the following subjects :—

Subjects for
examination.

- (1) Literary criticism as applied to Sanskrit Literature, according to a syllabus.
- (2) Indian Philosophy in its relation to Western Philosophy, according to a syllabus.
- (3) Indo-European Philology with special reference to Sanskrit, according to a syllabus.

18. The course of studies for the examination shall extend over a period of two years and shall be taken in an institution or institutions approved for the purpose by the Syndicate.

Course of
Studies—two
years.

19. The question papers in the examination for certificates shall be set and answered in English.

Papers set and
answered in
English.

20. The examination for certificates shall follow immediately after the Final Examination for Titles in Oriental Learning.

Day of
examination.

Admission.

21. No candidate shall be admitted to the examination for Certificates until the expiry of two years from the date of his appearing for and passing the preliminary examination for Titles. He shall also satisfy the conditions laid down in section 15 supra.

Exemption.

22. Applications for exemption from the production of the prescribed certificate shall be forwarded so as to reach the registrar before the 1st October preceding the examination.

**Candidates
may qualify
for another
optional.**

23. Candidates for certificates, who have passed the examination for Titles and have satisfied the Examiners in one optional subject, may present themselves for examination in another optional subject after an interval of two years without further attendance in an approved institution.

**Duration of
paper.**

24. In each subject for examination for certificates there shall be one paper of three hours' duration, which candidates shall be required to answer on the morning of the day following the final examination for Titles.

**Classification
of successful
candidates.**

25. A candidate shall be declared to have passed the examination, if he obtains not less than forty *per cent* of the marks. All others shall be deemed to have failed in the examination. Successful candidates shall be arranged in three classes :—

(a) Those who obtained not less than sixty *per cent* of the marks shall be placed in the first class. (b) Those who obtained not less than fifty *per cent* of the marks shall be placed in the second class. (c) The rest shall be placed in the third class.

Syllabuses.

Note.—Same as those contained in the last Chapter (i.e.) No. L.

Outlines of the History of Telugu Literature.

N.B.—The syllabus is the same as that prescribed for the B.A. (Pass) Group VI."

History of Oriya Language.

General.—The origin of the Oriya language. The area in which it is spoken. Its place in the Aryan family of languages. The period of

Subdivisions of individual Rasas; Mutual incongruities of Rasas. Bhavodaya, Bhavasabalata. Rasasraya (Lokika and Aloukika). General criticism.

4. *Dosaprakarana.*—Dosa defined. Dosas classified—pada, padamsa, vakya, artha, rasa, alankara; places where they are treated as guṇas—not counted as dosas.

5. *Guṇaprakarana.*—Guṇas defined and classified. Old and new schools. Difference between guṇa and alankara.

6. *Kavyatmavimarsha.*—Riti—vakrokti—ouchitya—rasa, etc.

7. *Alankaraprakarana.*—Alankara defined and classified—Sabdalanakara—Arthalankara—Ubhayalankara—classification on the basis of (1) Sadṛśya, (2) Vyanjana, (3) Svabhavokti. (4) Vakrokti. Individual Alankaras—their mutual difference.

8. *Dhvaniprakarana.*—Dhvani defined. Its classifications—Gunibhuta Vyangya and its classifications.

CHAPTER L.I.

DEGREE OF BACHELOR OF ORIENTAL LEARNING (B. O. L.) (PAREENA)

(Regulations)

1. Candidates for the Degree of the Bachelor of Oriental Learning (Pareena) shall be required (i) to have passed the Vidya Praveena examination of the University or an examination of any other Indian University accepted as equivalent thereto (ii) to have attained the fourth Form standard of English; and subsequently (iii) to have undergone in the University College a course of study extending over two years each consisting of three consecutive terms; and (iv) to have passed the examination for the degree hereinafter prescribed.

Conditions of admission.

2. The course for the B.O.L. degree (Pareena) examination shall consist of two parts, of which Part I shall be devoted to the study of English, and Part II to the study of one of the following special subjects :

Courses of study.

- (1) Nyaya
- (2) Vyakarana
- (3) Alamkara.
- (4) Dharma Sastra

3. The courses of study shall be as indicated in the syllabus, in addition to the text-books which will be prescribed from time to time.

The text-books prescribed for the Matriculation examination shall be studied by the candidates for Part I. Text-books for advanced study of the Sastra (optional selected) shall be prescribed year after year. The candidates shall also be introduced to the comparative study of the subject from the standpoint of the western culture.

4. Candidates shall be examined in

Part I—English: There shall be one paper of three hours' Examination, duration carrying 100 marks in English Composition, Precis Writing

based on the text-books studied in the course and Translation from Sanskrit to English.

Part II:—There shall be four papers, each of three hours' duration carrying 100 marks. Two papers will be set on the text books prescribed for study, and the questions set shall be such as to test the detailed knowledge of these books. The third paper shall be devoted to the writing of an essay or essays on some aspect or aspects of the optional subject of the candidate. These papers shall be set and answered in sanskrit. The fourth paper shall contain questions requiring discussion, from the point of Western thought and in accordance with the modern historical and critical method of Western scholars, of the History of the special subject and of the value of its main concepts and theories, as indicated in the syllabus. This paper will be set and answered in English.

5. A candidate may appear for both the parts or Part I or Part II separately.

Marks qualifying
for a pass.

6. A candidate shall be declared to have passed Part I if he gets 35 per cent of the marks prescribed for that part.

A candidate shall be declared to have passed Part II if he gets 35 per cent of the marks prescribed for papers I and II taken together and 35 per cent of the marks prescribed for papers III and IV taken together and 40 per cent of the total marks prescribed for this part.

All other candidates shall be deemed to have failed in the examination.

Classification of
successful candidates.

7. Candidates who pass in Part I and obtained not less than 60 per cent of the marks prescribed in Part II shall be declared to have passed the whole examination in the first class and they shall be ranked in the order of proficiency as determined by the total number of marks obtained by each in Part II. The rest shall be placed in the second class,

CHAPTER LII.

DEGREE OF MASTER OF ORIENTAL LEARNING.

1. Every candidate for the Degree of Master of Oriental Admission to Learning shall have passed the Examination for Certificates of Examination. Proficiency in Oriental Learning and shall have thereafter pursued for two years an advanced course of study bearing upon the subject selected by him for the examination for that certificate.

- (a) a certificate in the following terms from the head of (a) Certificate. an institution approved under Regulation 15 of Chapter L-A for imparting instruction in, or from a member of the Board of Studies dealing with, the subject of the candidate's Certificate of Proficiency, or from some competent scholar recognized by the Syndicate :—

Form of Certificate.

I hereby certify that, to the best of my knowledge and belief.....has pursued, for not less than two years after qualifying for the Certificate of Proficiency in Oriental Learning, an advanced course of study bearing upon the subject of his Certificate of Proficiency.

Date

Station.

Signature with designation

and

- (b) an original thesis in English showing evidence of original (b) Thesis. work connected with the special subject in which he qualified himself for his certificate, the candidate indicating in a preface to his thesis, and specially in notes, the sources from which his information is taken and the extent to which he has availed himself of the work of others.

The application with the certificate mentioned above together with three copies printed or type-written, of the thesis should be forwarded so as to reach the Registrar between 1st June and 1st July of any year.

**Examination
of Thesis.**

3. The thesis shall be referred by the Syndicate to a Board consisting of not more than three persons who at their discretion may require the candidate to appear before them to be tested orally with reference to the thesis (and to his facility in the use of the English Language) The Board shall report to the Syndicate the result of the examination of the thesis, and of the oral examination, if any, stating whether, in their opinion the candidate is, by reason of his attainments, a fit person to receive the Degree of Master of Oriental Learning. The Syndicate shall publish the name of each successful candidate for the Degree with the title of his thesis.

**Publication
of Thesis.**

4. Every candidate shall be at liberty to publish his thesis. The thesis of any candidate may be published by the University with the inscription 'Thesis approved for the Degree of Master of Oriental Learning'.

CHAPTER LIII.

DIPLOMA IN LIBRARIANSHIP.

1. No candidate shall be eligible for the Diploma in Librarianship unless he has undergone the prescribed course and satisfied the examiners in the qualifying examination.

2. No candidate shall be admitted to the Diploma course unless he has passed the Matriculation examination of this University or any other examination accepted as equivalent thereto by the Syndicate.*

3. Applications for admission to the course must reach the Registrar in the prescribed form not later than 15th June of each year.

4. The course for the Diploma Examination shall extend over one academic year consisting of three terms (from July to March) and shall be as follows:—

- i. Library Organization.
- ii. Library Administration and Routine.
- iii. Classification (Theory).
- iv. Practical Classification.
- v. Cataloguing and Indexing.
- vi. Practical Cataloguing.
- vii. Bibliography, Book-selection and Reference work.
- viii. Special Library problems —
 - a. Public Libraries and their branches.
 - b. University and College Libraries, and Libraries of Learned Societies.
 - c. School Libraries.
 - d. Juvenile Libraries.
 - e. Rural Library Service.
 - f. Archives and Government Records.
 - g. Other types of Libraries.

* *Vide* page 258 of the code.

5. No student shall be admitted for the examination unless he has attended not less than three-fourths of the lectures and other classes provided and has obtained from the Director of the School the prescribed progress and attendance certificate.

6. The fees for the courses and examinations shall be as follows :—

*I. (i) Admission fee	...Rs. 5
(ii) Tuition fee	...Rs. 20 per term.
†II. Examination—	
Whole examination (1st appearance)	...Rs. 20
One or more papers	...Rs. 5 each.

7. Each paper shall be of three hours' duration and shall carry 100 marks. The Examination will be in the following subjects divided into three groups A (Nos. 1 and 2), B (Nos. 3 and 4) and C (Nos. 5 and 6)—

Paper No. 1 Library Organization.

2. Library Administration.

3. Classification, theory and practical.

4. Cataloguing, theory and practical.

5. Bibliography, Book-selection and Reference work.

6. Special Library problems.

8. A candidate presenting himself for the examination for the first time must appear for the whole examination and thereafter may appear in one or more groups in which he has failed.

9. A candidate shall be declared to have passed the examination if he obtains not less than 45 per cent of the marks in each group.

Successful candidates who obtain not less than 60 per cent of the aggregate marks in the whole examination in any one year shall be declared to have passed the examination with distinction.

*.Ordinance,

† Statute.

TRANSITORY REGULATIONS.

- (i) A candidate shall be declared to have passed the examination if he obtains not less than 35 per cent of the marks in each paper.
- (ii) Candidates who fail in any subject or subjects may, without putting in any additional attendance, appear for and complete the examination in any subsequent year.

10. Candidates who fail in any group may, without putting in any additional attendance at the course, appear for the examination in any subsequent year.

11. The Syndicate will be empowered to organize vacation courses in such a way that in the course of two consecutive vacations a candidate can complete the whole of the above course. An examination shall be held at the end of each vacation and certificates of pass shall be given to those who obtain in the aggregate 35 per cent. of the marks prescribed. A candidate who obtains two such certificates covering the whole course shall be eligible for the Diploma in Librarianship.

It shall be competent for the Syndicate to suspend the vacation courses whenever it so decides.

SYLLABUSES.

1. **Library Organisation.**—A course of lectures on the history of Libraries, modern Library movement, Library legislation in various countries and the organisation of different types of Libraries ;

2. **Library Administration and Routine.**—Both lectures and practical work in administrative details such as preparing budget, distribution of funds, keeping accounts, ordering, collecting and accessioning stock, charging, discharging etc.

This will include a special course of lectures and practical demonstration in the art of book-binding and book-repairing.

3. **Classification.**—Lectures on the history and science of classification as well as a detailed examination of the principles and

methods of important schemes of classification such as Brown, Cutter, Congress, Dewey Decimal and Expanded Decimal Schemes.

4. **Practical Classification.**—Students will be required to classify not less than 500 books on various subjects during the course. Their work will be examined in class. Classification will be based on the Dewey Decimal scheme (expanded decimal included) and the Congress scheme.

5. **Cataloguing and Indexing.**—The course is designed to give instruction in different forms of cataloguing as well as in various codes of cataloguing such as the Bodleian, British Museum, Cutter's dictionary and the Anglo-Saxon codes.

6. **Practical Cataloguing.**—Cataloguing and indexing of not less than 250 books of various types will be done in class. Care form will be followed

Instruction in practical classification and practical cataloguing will be combined during the third term so as to give students a clear idea of the scope and purpose of cross-references, cross-reference index, analytic entries etc.

7. **Bibliography, Book-selection and Reference work.**—

(a) Lectures in historical and analytical bibliography as well as practical work in compiling bibliographies of various subjects.

(b) Principle and practice of Book-selection for various types of libraries. Students will be expected to book-selection work throughout the year with the aid of bibliographies, current sale catalogues, reviews of books in papers, periodicals etc.

(c) Lectures and practical work in the art of helping readers in their selection of literature and reading.

8. **Special Library problems.**—

(a) **Public Libraries and their branches.** A study of special problems connected with the organisation and administration of public libraries such as rating, site, plan, construction, publicity, book-selection, control supervision, charging etc.

(b) 1. UNIVERSITY AND COLLEGE LIBRARIES.**2. LIBRARIES OF LEARNED SOCIETIES.**

A seminar course for the discussion of peculiar problems connected with libraries of Universities, colleges and learned societies such as departmental libraries, control of issues to teachers, patrons and subscribers, aid to research workers, etc.

(c) School Libraries.—Lectures on the formation and administration of Libraries in schools of every type ; aid to pupils in their book-selection and reading ; instruction in the use of books and other problems.

(d) Juvenile Libraries.—Lectures on child psychology, Juvenile literature, art of story telling organization and administration of Juvenile libraries as a part of the public library programme, etc.

(e) Rural Library Service.—A survey of rural Library systems in other countries ; a study of Indian rural problems, with special reference to rural libraries ; plans to establish rural library centres, travelling libraries, lecture centres, cinema houses etc, in rural districts.

(f) Archives and Government Records.— study of the methods of preservation and use of ancient records and government documents as well as peculiar problems connected with the administration of Government Libraries.

(g) Other types of Libraries.—Commercial and technical libraries, hospital libraries, libraries for the blind etc. which are common in western countries will be studied with a view to their introduction and establishment in this country.

CHAPTER LIV.
COURSES IN FRENCH & GERMAN.

1. There shall be a diploma course and a vacation course in French and German.

Diploma Course.

2. No candidate shall be eligible for diploma in French or German who has not undergone a prescribed course and satisfied the examiners in a qualifying examination.

3. No candidate shall be admitted to the courses of instruction in French and German who has not passed the Matriculation examination of the University or an examination recognised by the Syndicate as equivalent thereto.*

4. The course shall consist of three terms extending over one academic year. Applications for admission must reach the Registrar not later than 15th May.

5. For the purpose of entrance to the course no previous acquaintance with the language is required and the candidates will be taught on a syllabus and text-books to be prescribed from year to year.

6. There shall be an examination held annually in the first week of July or on such dates as may be fixed by the Syndicate. Stress shall be laid on the aptitude of candidates for translation both out of and into the selected language rather than for grammar.

7. The examination shall consist of two papers, the first of three hours' and the second of two hours' duration. The first paper shall contain questions on text-books and grammar and the second paper shall contain questions on translation from the selected language into English and *vice versa*.

8. No candidate shall be admitted to the examination unless he has attended not less than 75 per cent of total number of lectures and has produced a certificate from the lecturer certifying that his progress and conduct have been satisfactory. But persons

* Vide Page 258 of this code.

who have attended two vacation courses—one junior and the other senior—may sit for the examination.

9. A candidate shall be declared to have passed the examination if he obtains not less than 40 per cent of the total marks in all the papers taken together. All other candidates shall be deemed to have failed in the examination. Successful candidates obtaining not less than 60 per cent of the marks shall be declared to have passed with distinction.

10. The fee for the course in either French or German shall be Rs. 45 for the whole course, payable at the beginning of the academic year.

11. Notwithstanding anything contained in this Chapter, it shall be competent for the Syndicate, by previous notice in the Fort St. George Gazette, to suspend for any year or any number of years the course and examination for the Diploma in French or German.

Vacation Course

12. For the benefit of mofussil teachers and others desirous of gaining some knowledge of either French or German, vacation courses may be arranged by the Syndicate should there be a sufficient number of applicants joining the course. The lectures will last for about three months (April—June). The fee for the course shall be Rs. 40. There will be no University Examination at the end of the course, but a certificate of having undergone the course satisfactorily shall be given to each candidate if he satisfies a test.

Notwithstanding anything contrary to the first paragraph of the section, it shall be competent for the Syndicate to arrange for two vacation courses—one junior and the other senior—and those who attend these courses and put in the prescribed attendance will be permitted to sit for the diploma examination. The fee for the whole course will be Rs. 40 payable at the rate of Rs. 20 at the beginning of each course.

It shall be competent for the Syndicate, by previous notice, to suspend the vacation course for any year or number of years.

CHAPTER LV.
DATES FOR PAYMENT OF EXAM. FEES, SUBMISSION OF CERTIFICATES,
COMMENCEMENT OF EXAMS. AND PUBLICATION OF RESULTS.

(*Ordinances*)

1. The latest dates on which fees for examination shall be payable and applications for admission thereto and certificates to be produced by candidates or to be submitted to the Registrar in the forms prescribed, the date on which examination shall begin and the dates on which the results of the examination shall be published at the University Office shall be as follow:—

Examination.	Latest date for payment of fees and for submitting applications.	Latest day for submitting certificates.	Date for commencement of examination.	Latest date for publication of results.
Matriculation	Dec. 15	March 9	4th Monday in March	3rd Monday in May.
Intermediate	Dec. 15 or July 15	March 9 or August 19	4th Monday in March or 2nd Monday in Sept.	3rd Monday in May or October.

CHAPTER LVII

TRANSFER AND TERM OR ANNUAL CERTIFICATES.**Transfer
Certificate.**

1. No student who has previously studied in any recognized school or college shall be admitted to a college unless he presents a transfer certificate showing :—

- (a) the name of the student in full,
- (b) the date of birth as entered in the admission register,
- (c) the dates on which he was admitted to and on which he left the institution,
- (d) the class in which he studied at the time of leaving it,
- (e) the subjects or portions thereof studied by him while enrolled,
- (f) if it be the time when annual promotions take place whether he is qualified for promotion to a higher class,
- (g) that he has paid all fees or other moneys due to that institution in respect of the last term in which he was enrolled.

No student shall be enrolled pending the production of such certificate. Every such certificate shall be endorsed with the admission number under which the student is enrolled and shall be filed for reference and inspection.

**Issue of
Transfer
Certificate.**

2. A student applying for a transfer certificate during a college term on any day on which he has been enrolled, or applying not later than the fifth working day of the college term immediately following shall forthwith be given such certificate upon payment of all fees or other moneys due, or of such portion thereof as the principal may see fit to demand, for the college term in which he was enrolled.

A student applying for such certificate after the fifth working day of the college term immediately following that during which he has been last enrolled shall forthwith be given it on payment

of (1) all fees or other moneys due or of such portion thereof as the principal may see fit to demand in respect of the college term in which he was last enrolled and (2) an additional fee of Rs. 3 at the option of the principal:

Provided that, when a student has been enrolled at favourable fee rates, he shall be liable for such rates only.

No student shall be considered to have been enrolled in any college term unless he has attended the college and received instruction for at least one day of that college term or has paid the fees of portions thereof prescribed.

In the case of a student who has been a candidate for a University Examination, the results of which have not been published before the beginning of the college term the eleventh day after the results of that examination have been announced at the Senate House shall be counted for him the first working day of the college term so far as the grant of a transfer certificate is concerned.

In the event of a Principal refusing or delaying to give a transfer certificate to which a student may be entitled the student shall have right of appeal to the Syndicate.

3. If any student is expelled from an affiliated college, intimation of the fact of expulsion, with a statement of the reasons therefor, shall be given forthwith by the Principal (a) to the parent or guardian of the student and (b) to the Syndicate; intimation to the Syndicate shall be accompanied by the transfer certificate of the student. The Syndicate, on the application of the student or his parent or guardian, may after making such enquiry as it deems proper deliver the certificate to the student with any necessary endorsement or withhold it temporarily or permanently.

Expulsion of student from College.

4. The academic year for colleges affiliated in Arts, Science and Teaching shall consist of three terms, which shall ordinarily begin and end as follows.

Academic year.

First term—June to September, closing with the Michaelmas holidays.

Second term—October to December, closing with the Christmas holidays.

Third term—January to April closing with the Summer holidays.

Combination of attendances.

5. A student shall ordinarily qualify for the annual certificate in one and the same college but in special cases the Syndicate may allow attendance in different colleges to be combined for the purposes of the annual certificate.

Annual Certificate.

6. In colleges affiliated in Arts and Teaching the grant of the annual certificate shall be in respect of three terms ordinarily consecutive comprising one year; but it shall be competent for the authorities of an affiliated college to grant such certificate in respect of three terms which are not consecutive provided that the student has during those terms completed the necessary courses of study for the year.

Conditions of grant of annual Certificate.

7. The grant of the annual certificate shall be subject, in addition, to the following conditions:—

- (1) In colleges affiliated in Arts and Teaching, the certificates shall not be granted unless a student has kept three-fourths of the attendances prescribed by the college in the course of instruction followed by him during the year, and in institutions approved by the Syndicate under the regulations for Oriental Titles and Certificates of Proficiency in Oriental Learning unless he has kept three-fourths of the attendance prescribed by the institution in the particular course of study for which the certificate is issued.
- (2) In colleges of Science the certificates shall not be granted unless a student has kept three-fourths of the attendances prescribed by the college in the course of instruction followed by him during the year; in colleges in Medicine unless he has attended four-fifths of the lectures in each course.
- (3) The certificate shall not be granted unless the student has completed the course of instruction to the satisfaction of the authorities of his college and his progress and conduct have been satisfactory.

Form of certificates.

8. The certificates shall be drawn up in the following forms:—

1. MATRICULATION EXAMINATION.

I hereby certify that has kept attendance for not less than 120 days of the previous school year before 10th March in School that he has completed the course of study prescribed for the several classes of a high school and that his progress and conduct have been satisfactory.
